**Innovation Systems, Policy and Management** Jorge Niosi, 2018-06-30 Innovation is a systemic phenomenon in which institutions, such as firms, government entities and public policy incentives, interact in complex ways. Targeting specific sectors of an economy in order to improve the competitiveness and capabilities of domestic firms, interventionist innovation policies can result in the structural transformation of host economies. Numerous examples exist of such policies working successfully in emerging economies and they can be applied to any economic sector, although they are commonly associated with highly innovative industries such as ICT, biotechnology and nanotechnology. Innovation Systems, Policy and Management describes how institutions and markets can best be structured in order to promote innovation in key economic sectors. Bringing together some of the leading figures in industrial policy and the economics of innovation and entrepreneurship, this book encourages the reader to think in terms of systems and business dynamics when analysing innovation behaviour, providing an approach useful to policy makers, business leaders and scholars of evolutionary economics.

**Quantitative Models for Performance Evaluation and Benchmarking** Joe Zhu, 2017-05-04 The author is one of the prominent researchers in the field of Data Envelopment Analysis (DEA), a powerful data analysis tool that can be used in performance evaluation and benchmarking. This book is based upon the author's years of research and teaching experiences. It is difficult to evaluate an organization's performance when multiple performance metrics are present. The difficulties are further enhanced when the relationships among the performance metrics are complex and involve unknown tradeoffs. This book introduces Data Envelopment Analysis (DEA) as a multiple-measure performance evaluation and benchmarking tool. The focus of performance evaluation and benchmarking is shifted from characterizing performance in terms of single measures to evaluating

performance as a multidimensional systems perspective. Conventional and new DEA approaches are presented and discussed using Excel spreadsheets — one of the most effective ways to analyze and evaluate decision alternatives. The user can easily develop and customize new DEA models based upon these spreadsheets. DEA models and approaches are presented to deal with performance evaluation problems in a variety of contexts. For example, a context-dependent DEA measures the relative attractiveness of similar operations/processes/products. Sensitivity analysis techniques can be easily applied, and used to identify critical performance measures. Two-stage network efficiency models can be utilized to study performance of supply chain. DEA benchmarking models extend DEA's ability in performance evaluation. Various cross efficiency approaches are presented to provide peer evaluation scores. This book also provides an easy-to-use DEA software — DEAFrontier. This DEAFrontier is an Add-In for Microsoft® Excel and provides a custom menu of DEA approaches. This version of DEAFrontier is for use with Excel 97-2013 under Windows and can solve up to 50 DMUs, subject to the capacity of Excel Solver. It is an extremely powerful tool that can assist decision-makers in benchmarking and analyzing complex operational performance issues in manufacturing organizations as well as evaluating processes in banking, retail, franchising, health care, public services and many other industries.

*Critical CALL – Proceedings of the 2015 EUROCALL Conference, Padova, Italy* Francesca Helm,Linda Bradley,Marta Guarda,Sylvie Thouësny,2015-12-02 The theme of the conference this year was Critical CALL, drawing inspiration from the work carried out in the broader field of Critical Applied Linguistics. The term 'critical' has many possible interpretations, and as Pennycook (2001) outlines, has many concerns. It was from these that we decided on the conference theme, in particular the notion that we should question the assumptions that lie at the basis of our praxis, ideas that have become 'naturalized' and are not called into question. Over 200 presentations were delivered in 68 different sessions, both in English and Italian, on topics related specifically to the theme and also more general CALL topics. 94 of these were submitted as extended papers and appear in this volume of proceedings.

**An Introduction to Data Envelopment Analysis** R Ramanathan,2003-08-18 From the Foreword: 'This book is an excellent tool for practitioners who are interested in the merits and pitfalls of the technique.... (The author's) research is an example of inventiveness, diligence and accuracy' - Freerk A. Lootsma, Delft Institute of Technology Data envelopment Analysis is a Mathematical Programme for measuring performance efficiency of organizational units. The organizational units, termed as decision-making units (DMU) can be of any kind: manufacturing units, a set of schools, banks, hospitals, power plants, police stations, prisons, a set of firms etc. DEA has been unsuccessfully applied to measure the performance efficiency of these different kinds of DMUs which share a common characteristic - that they are non-profit organization where measurement of performance efficiency is difficult. DEA has been employed for assessing the relative performance of a set of firms that use a variety of identical inputs-say in the case of a school: quality of students, teachers, grants etc.,-to produce a variety of identical outputs-number of students who pass the final year, average grades obtained by the students in the final year etc. DEA assumes the performance of the DMUs by using the concepts of efficiency or productivity which is measured as the ratio of total outputs to total inputs. Also, the efficiencies estimated are relative to the best performing DMU or DMUs. The best performing DMU is given a score of 100% and the performance of other DMUs vary between 0 -100%.

The book outlines DEA as a benchmarking technique, identifies high cost service units, isolates specific changes for elevating performance to the best practice services level providing high quality service at low cost and most important, it guides the improvement process.

Advances in Data Envelopment Analysis Rolf Färe,Shawna Grosskopf,Dimitris Margaritis,2015-03-26 Data Envelopment Analysis (DEA) is often overlooked in empirical work such as diagnostic tests to determine whether the data conform with technology which, in turn, is important in identifying technical change, or finding which types of DEA models allow data transformations, including dealing with ordinal data. *Advances in Data Envelopment Analysis* focuses on both theoretical developments and their applications into the measurement of productive efficiency and productivity growth, such as its application to the modelling of time substitution, i.e. the problem of how to allocate resources over time, and estimating the value of a Decision Making Unit (DMU).

**Evaluating Hedge Fund and CTA Performance** Greg N. Gregoriou,Joe Zhu,2005-05-06 Introducing Data Envelopment Analysis (DEA) -- a quantitative approach to assess the performance of hedge funds, funds of hedgefunds, and commodity trading advisors. Steep yourself in this approach with this important new book by Greg Gregoriou and Joe Zhu. This book steps beyond the traditional trade-off between single variables for risk and return in the determination of investment portfolios. For the first time, a comprehensive procedure is presented to compose portfolios using multiple measures of risk and return simultaneously. This approach represents a watershed in portfolio construction techniques and is especially useful for hedge fund and CTA offerings. -- Richard E. *New Trading Dimensions* Bill M. Williams, 1998-10-06 Händler und erfahrene Privatanleger kommen immer mehr zu dem Schluß, daß die traditionellen Prognosemethoden der fundamentalen oder technischen Analyse offenbar zu widersprüchlichen Ergebnissen kommen. Bei den fundamentalen Analysten geht der Markt eher schwach, bei den technischen Analysten geht er fester. Die Folge von solchen gegensätzlichen Signalen ist, daß viele Händler und Anleger sich auf eine Kombination von wissenschaftlicher Theorie und Anlagepsychologie stützen. Bill Williams zeigt hier neue Perspektiven der Marktbeobachtung auf. Er kombiniert Elemente traditioneller technischer Chartmethoden mit Chaostheorie und Psychologie. Das Ergebnis ist ein komplexes, fünfdimensionales Handelsprogramm mit ausführlichen Erläuterungen und Beispielen zu Bereichen wie Fraktalanalyse, Oszillatoren und psychologischen Aspekten. (10/98)
