Salzburg with the OBB Rudolf J. Strutz, The „Mozart City” Salzburg can be reached comfortably and environmentally friendly with the OBB trains from many European locations. The narrow streets and dreamy squares of Salzburg are best explored on foot or by public transport.

The Austrian Party System Anton Pelinka, Fritz Plasser, 2019-09-05 First published in 1989. Political science in Austria is a relatively young discipline. It began to gradually establish itself in the 60's and only as recently as 1971 was it anchored in the curriculum of Austrian universities as a separate field of study. With the present book in English the editors hope to stimulate the interest of international social scientists in Austria, to overcome language barriers, and to make the topical problems and developments of Austrian democracy accessible to an international reading public. The book is intended to reflect the current state of a discipline-political science. However, it is also to be a contribution to the further development of this discipline. It should stimulate further, intensive and critical occupation with the theme parties and the party system in Austria.

Vienna with the OBB Rudolf J. Strutz, To describe Vienna in a single eBook is simply impossible. For this reason, I have tried to present the city with lots of photographs and create an overview of exciting places and locations to visit on your next trip to this great city. Almost every street corner in Vienna has some connection to a famous musician, poet, politician or even members of the imperial family. I am inviting you to come on a colorful walk through the most livable city in the world.

Munich with the OBB Rudolf J. Strutz, Munich is always worth a visit! The typical Bavarian way of life, the hearty meals and the ubiquitous beer are just a few of the reasons why tourists love to visit Munich. It is easy to walk to the city centre from Munich's main train station. Even from your comfortable seat on the OBB Railjet you will be able to see that traffic in Munich is a whole other ballgame. Thankfully, the city is equipped with an excellent network of public transportation, which takes you from point A to point B quickly and without traffic jams.

Salzkammergut with the OBB Rudolf J. Strutz, Salzkammergut is the name given to the region from Fuschlsee, Wolfgangsee and Mondsee to the Almtal. It also extends from the Vöckla valley to the

Dachstein and Grimming. The area is particularly popular with hikers. With the OBB nightjets you can easily get to the Salzkammergut via the city of Salzburg, which you can then travel to with the OBB regional trains.

Pulsars as Astrophysical Laboratories for Nuclear and Particle Physics Fridolin Weber,2017-09-18

Pulsars, generally accepted to be rotating neutron stars, are dense, neutron-packed remnants of massive stars that blew apart in supernova explosions. They are typically about 10 kilometers across and spin rapidly, often making several hundred rotations per second. Depending on star mass, gravity compresses the matter in the cores of pulsars up to more than ten times the density of ordinary atomic nuclei, thus providing a high-pressure environment in which numerous particle processes, from hyperon population to quark deconfinement to the formation of Boson condensates, may compete with each other. There are theoretical suggestions of even more exotic processes inside pulsars, such as the formation of absolutely stable strange quark matter, a configuration of matter even more stable than the most stable atomic nucleus, ^{56}Fe . In the latter event, pulsars would be largely composed of pure quark matter, eventually enveloped in nuclear crust matter. These features combined with the

tremendous recent progress in observational radio and x-ray astronomy make pulsars nearly ideal probes for a wide range of physical studies, complementing the quest of the behavior of superdense matter in terrestrial collider experiments. Written by an eminent author, *Pulsars as Astrophysical Laboratories for Nuclear and Particle Physics* gives a reliable account of the present status of such research, which naturally is to be performed at the interface between nuclear physics, particle physics, and Einstein's theory of relativity.
