*Rivers of the World* James Penn, 2001-12-12 *Rivers of the World*, vividly written and meticulously researched, is a rich and thorough treatment of some 200 of the world's rivers. In this comprehensive treatment of the major rivers of the world, author James R. Penn's purpose is not just to feature geographic data, but to tell a story of historical drama, poetic significance, and

cultural relationships. The book shows glimpses of Chairman Mao boosting his image by swimming in the Yangtze; Indian middlemen residing on both sides of the Columbia River exacting tolls from travelers like Lewis and Clark; and, near the Dordogne in southwest France, Paleolithic cave art, paintings, and designs in rock shelters and subterranean caverns, which are textbook examples of early human creativity and artistic impulse. In nearly 200 entries ranging from a few paragraphs to several pages, *Rivers of the World* covers all of the great rivers of the world including the Nile, Niger, Amazon, and Mississippi, as well as smaller waterways that illustrate important themes or represent trends. The book includes bibliographies for each river.

**Precipitation: Advances in Measurement, Estimation and Prediction** Silas C.

Michaelides, 2008-02-27 This volume is the outcome of contributions from 51 scientists who were invited to expose their latest findings on precipitation research and in particular, on the measurement, estimation and prediction of precipitation. The reader is presented with a blend of theoretical, mathematical and technical treatise of precipitation science but also with authentic applications, ranging from local field experiments and country-scale campaigns to multinational space endeavors.

**Advances in Water and Wastewater Treatment Technology** T. Matsuo, K. Hanaki, S. Takizawa, H.

Satoh, 2001-08-14 This book is the result of the international symposium, Establishment and Evaluation of Advanced Water Treatment Technology

Systems Using Functions of Complex Microbial Community, organized in 2000 at the University of Tokyo. The volume presents the most recent progress in application of microbial community analysis, health-related microorganisms management, nutrient removal, waste sludge minimization and materials recovery, and water management in tropical countries. Included in this work are the following major topics in wastewater treatment: application of various innovative techniques of molecular biology such as FISH, DGGE to microbial community analysis of various types of wastewater treatment; microbial aspect of biological removal of nitrogen and phosphorus; emission of nitrous oxide during nitrogen transformation; reduction of sludge production in the wastewater treatment process using membrane and material recovery of biopolymer and cell of photosynthetic bacteria. Health-related microbiology in water supply and water management using recent innovative molecular biological tools is presented and health risk management is discussed. The practical application of wastewater treatment in developing countries, especially tropical countries is also reviewed. Researchers in the field of environmental engineering and applied microbiology, and practical engineers who wish to learn the most recent progress in the microbiological aspect of water and wastewater management, will find this book a useful tool.

The Molecular Nutrition of Amino Acids and Proteins Dominique Dardevet, 2016-06-08 The Molecular Nutrition of Amino Acids and Proteins provides an in-depth look at the involvement and

role of amino acids and proteins in molecular nutrition. Editor Dominique Dardevet has assembled a collection of chapters written by leading researchers and top professors that provide the reader with a comprehensive understanding of amino acids and proteins. The book provides an introduction to the fundamentals of amino acids and proteins as well as the composition of food. It then delves into the molecular biology of the cell and genetic machinery and its function. The *Molecular Nutrition of Amino Acids and Proteins* also features reference guides for terms and bullet-point summaries, making it readily accessible to novices while still providing the most up-to-date and detailed information that experienced researchers need. Provides a gentle introduction to the subject by first addressing nutritional information and then building in molecular aspects, clearly establishing fundamental information for the reader Facilitates reader comprehension by including succinct summary points in each chapter Contains a glossary of definitions that allows readers to easily reference terms Provides both a deep and broad understanding of the subject by containing overviews as well as detail-focused chapters

*River Flow 2014* Anton J. Schleiss, Giovanni de Cesare, Mario J. Franca, Michael Pfister, 2014-08-12 The behaviour of river systems is a result of the complex interaction between flow, sediments, morphology and habitats. Furthermore, rivers are often used as a source of water supply and energy production as well as a waterway for transportation. The main challenge faced by river

engineers today, in collaboration with environmental and ecological scientists, is to restore the channelized rivers under the constraints of high urbanization and limited space, as well as sustainable water use. During the seventh International Conference on Fluvial Hydraulics "River Flow 2014" at École Polytechnique Fédérale de Lausanne (EPFL), Switzerland, scientists and professionals from all over the world addressed this challenge and exchanged their knowledge regarding fluvial hydraulics and river morphology. This book comprises the proceedings of the high quality contributions of the participants, which reflect the state-of-the-art in the fields of river hydrodynamics, morphodynamics, sediment transport, river engineering and restoration. The conference was organized under the auspices of the Committee on Fluvial Hydraulics of the International Association for Hydro-Environment Engineering and Research (IAHR). Past River Flow conferences have witnessed a significant increase in participation of our community of river engineers and researchers, confirming the need for such a forum.

*Naturbeobachtungen an der Aare* Werner Geissmann, 2020-10-27 Was soll ein weiteres Buch zur Naturschutzproblematik und zu Flussrenaturierungen? Immer weniger Leute kaufen ja Bücher, und der Aufwand steht in keinem Verhältnis zum Ertrag. Sofern denn ein solcher überhaupt ausgewiesen werden kann. Beim Schreiben früherer Bücher habe ich gemerkt, dass man selber beim Schreiben und Beobachten viel lernt und herausfindet. Dies allein ist also ein Grund

Bücher zu machen. Wie sieht es nun aber mit den Millionen von Franken an Steuergeldern aus, die für die Renaturierungsarbeiten an der Aare zwischen Olten und Aarau ausgegeben wurden? Brachten die Programme etwas für die Flora und Fauna oder waren es blosse Arbeitsbeschaffungsprogramme? Oder gar Alibiübungen? Während eines Jahres, von Oktober 2019 bis September 2020, habe ich die Schachengebiete an der Aare zwischen Aarau und Olten (Kantone Solothurn und Aargau / Schweiz) regelmässig besucht. In diesem Tagebuch habe ich das Entdeckte beschrieben und wo immer möglich auch fotografisch festgehalten. Die Bilder wurden, wenn nicht besonders vermerkt, im besprochenen Monat vor Ort von mir gemacht.
