Drawing the Line Tom Sito,2006-10-06 Some of the most beloved characters in film and television inhabit two-dimensional worlds that spring from the fertile imaginations of talented animators. The movements, characterizations, and settings in the

best animated films are as vivid as any live action film, and sometimes seem more alive than life itself. In this case, Hollywood's marketing slogans are fitting; animated stories are frequently magical, leaving memories of happy endings in young and old alike. However, the fantasy lands animators create bear little resemblance to the conditions under which these artists work. Anonymous animators routinely toiled in dark, cramped working environments for long hours and low pay, especially at the emergence of the art form early in the twentieth century. In *Drawing the Line*, veteran animator Tom Sito chronicles the efforts of generations of working men and women artists who have struggled to create a stable standard of living that is as secure as the worlds their characters inhabit. The former president of America's largest animation union, Sito offers a unique insider's account of animators' struggles with legendary studio kingpins such as Jack Warner and Walt Disney, and their more recent battles with Michael Eisner and other Hollywood players. Based on numerous archival documents, personal interviews, and his own experiences, Sito's history of animation unions is both carefully analytical and deeply personal. *Drawing the Line* stands as a vital corrective to this field of Hollywood history and is an important look

at the animation industry's past, present, and future. Like most elements of the modern commercial media system, animation is rapidly being changed by the forces of globalization and technological innovation. Yet even as pixels replace pencils and bytes replace paints, the working relationship between employer and employee essentially remains the same. In *Drawing the Line*, Sito challenges the next wave of animators to heed the lessons of their predecessors by organizing and acting collectively to fight against the enormous pressures of the marketplace for their class interests—and for the betterment of their art form.

This book helps students understand the role innovation has played in the development of animation industry.

Animation & Cartoons Nicolae Sfetcu, 2014-05-07 An animated cartoon is a short, hand-drawn (or made with computers to look similar to something hand-drawn) moving picture for the cinema, TV or computer screen, featuring some kind of story or plot.

Animation is the optical illusion of motion created by the consecutive display of images of static elements. In film and video production, this refers to techniques by which each frame of a film or movie is produced individually. Computer animation is the art of creating moving images via the use of computers. It is a subfield of computer graphics and animation. Anime is a medium of animation originating in Japan, with distinctive character and background aesthetics that visually set it apart from other forms of animation.

An animated cartoon is a short, hand-drawn (or made with computers to look similar to something hand-drawn) moving picture for the cinema, TV or computer screen, featuring some kind of story or plot (even if it is a very short one). Manga is the Japanese word for comics and print cartoons. Outside of Japan, it usually refers specifically to Japanese comics. Special effects (abbreviated SPFX or SFX) are used in the film, television, and entertainment industry to visualize scenes that cannot be achieved by normal means, such as space travel. Stop motion is a generic general term for an animation technique which makes static objects appear to move.

Animation in Asia and the Pacific John A. Lent, 2001 Animation has had a global renaissance during the 1990s, and nowhere is this more evident than in Asia. With the exception of China and Japan, most Asian nations are relatively new to this art form. Over the last decade, countries such as Taiwan, South Korea, the Philippines, and Thailand, as well as China, have acted as major offshore production plants for North American and European studios. One of the spurs for this increase in activity has been the global growth of terrestrial, cable, satellite, and video systems, all demanding large menus of programming, including animation. A

second spur has been the exceptional popularity that Japanese animé has enjoyed across Asia, Europe, and the United States. Despite these developments, there has not been corresponding growth of a serious literature covering industrial and aesthetic issues about Asian animation, and the small amount of work that has been produced has not been published in English. Animation in Asia and the Pacific provides the first continent-wide analysis, delving into issues of production, distribution, exhibition, aesthetics, and regulation in this burgeoning field. Animation in Asia and the Pacific also offers vignettes of the fascinating experiences of a group of animation pioneers. The historical and contemporary perspectives derive from interviews, textual analysis, archival research, and participation/observation data.

The Animation Studies Reader Nichola Dobson,Annabelle Honess Roe,Amy Ratelle,Caroline Ruddell,2018-10-18 The Animation Studies Reader brings together both key writings within

animation studies and new material in emerging areas of the field. The collection provides readers with seminal texts that ground animation studies within the contexts of theory and aesthetics, form and genre, and issues of representation. The first section collates key readings on animation theory, on how we might conceptualise animation, and on some of the fundamental qualities of animation. New material is also introduced in this section specifically addressing questions raised by the nature, style and materiality of animation. The second section outlines some of the main forms that animation takes, which includes discussions of genre. Although this section cannot be exhaustive, the material chosen is particularly useful as it provides samples of analysis that can illuminate some of the issues the first section of the book raises. The third section focuses on issues of representation and how the medium of animation might have an impact on how bodies, gender, sexuality, race and ethnicity are represented. These representations can only be read through an understanding of the questions that the first two sections of the book raise; we can only decode these representations if we take into account form and genre, and theoretical conceptualisations such as visual pleasure, spectacle, the uncanny, realism etc.
