*The Role of Technology in Distance Education (Routledge Revivals)* Tony Bates,2014-11-13 This book, first published in 1984, provides a comprehensive review of the range of technology that was being used in distance education. Technological developments in word processing, video-disc and viewdata as well as computer-based learning had revolutionised the potential for distance education. These developments required the role of more 'conventional' distance learning media, such as broadcasting, tuition and text, to be reassessed. This book, written by international experts in the field, explored the state of the art at the time, and also provided their ideas on how future developments were likely to evolve. This book is ideal for those studying education and communications.

**Does Your Brain Need You? An Introduction to Neuroscience and Consciousness** Clemens Lode,2021-01-01

This book is about the neuroscience of you and the mind-body connection. Starting with the evolution of awareness, the book will explain the theory of mind and how it relates to our ability to recognize ourselves in the mirror. In the second part, the book will discuss the philosophy of consciousness and how we could create consciousness with artificial intelligence. Who is this for? What is it about? What will it do for me? This book is for anyone interested in

the inner mechanisms that make up you, your consciousness, your perception of self, and your awareness. While it raises significant philosophic and scientific questions, it is an introductory book and can be read and understood by anyone new to the topic. The book explains how our brain evolved over millions of years, what damage to our brain can do to our conscious experience of the world, and how we could recreate human consciousness in a mechanical system. For you, the reader, the book will provide you with a new perspective on free will, consciousness, and philosophy. Imagine one of our ancestors in the distant past, sitting near a lake, lost in thought. She looks into the water and sees her reflection. Then, for the first time in the evolutionary history of humans, the question is asked, What is this experience I have of myself? Unbeknownst to her, that question would vex humanity through modern times. Today, there is again an entity looking into a proverbial lake and examining its reflection: while artificial intelligence is still in its infancy, it is on the verge of recognizing itself and asking the same question, Who am I? The closer we come to a machine that seems to be as intelligent as a human being, the more we start to worry about our own subjective experience. If a computer eventually becomes indistinguishable from us, what makes humans special? What is our role in the universe if we are so similar to a computer program? Does your brain need you at all? In this book, I will examine, from the ground up, questions about consciousness. Many steps toward the understanding of the self will tell you nothing about the self—until your right hemisphere connects everything into one idea as you understand the concept. Such an insight is also called an epiphany. Using a brain scanner, we can actually observe someone having an epiphany when the brain's right hemisphere suddenly buzzes with activity. While the left hemisphere deals with concrete entities, the right hemisphere helps with looking for alternative meanings. For example, the left hemisphere might identify a bank as a financial institution, while the right

hemisphere also considers it to be the edge of a river (riverbank). In the Old Indo-Aryan language Sanskrit, an epiphany leading you to the answer about who you are is called bodhi, which literally means awakening or enlightenment. Similarly, the name Buddha means the Awakened One or the Enlightened One. A similar idea can be found in Zen Buddhism as Satori which corresponds to a very sudden insight. This book shows some of the steps leading to Satori, combining the insights of philosophers and scientists into a new idea of what the self means. With this knowledge, we can better reflect on our own values and act according to reality rather than just blindly following someone else's beliefs. My goal with the book is to give you an introduction to neuroscience that is not scattered into different parts. I aim to focus on helping you to answer the following questions: What is the self? Does your brain even need a self? Is there a consciousness beyond the body? What is this seemingly mysterious subjective experience we share? How can we think, dream, plan, feel, and make decisions?

A Mind Unraveled Kurt Eichenwald, 2019-10-15 The compelling story of an acclaimed journalist and New York Times bestselling author's ongoing struggle with epilepsy—how, through personal resilience and the support of loved ones, he overcame medical incompetence and institutional discrimination to achieve once unthinkable success. With a new afterword • “REMARKABLE . . . inspirational in the true sense of the word.”—The New York Times Book Review This is the story of one man's battle to pursue his dreams despite an often incapacitating brain disorder. From his early experiences of fear and denial to his exasperating search for treatment, Kurt Eichenwald provides a deeply candid account of his years facing this misunderstood and often stigmatized condition. He details his encounters with the doctors whose negligence could have killed him, but for the heroic actions of a brilliant neurologist and the family and friends who fought for him. Eichenwald's narrative is a suspenseful medical thriller about a condition that makes everyday life a mine

field, a fierce indictment of a callous medical establishment, and an against-the-odds recovery saga.”—Publishers Weekly (starred review) “Riveting . . . Eichenwald has created a universal tale of resilience wrapped in a primal scream against the far-too-savage world.—Booklist (starred review) “An extraordinary book.”—Harriet Lerner, Ph.D., New York Times bestselling author of *The Dance of Anger*

*The Encyclopedia of Indian Philosophies* Karl H. Potter, Gerald James Larson, 1970 The volume traces the intellectual history of Patanjala Yoga philosophy from the early centuries of the Common Era through the twentieth century. It also provides a systematic discussions of the philosophy of classical Yoga. Particular attention is given to the meaning of concentration (Samadhi), engrossment (samapatti) and the extra-ordinary cognitive capacities (vibhuti, siddhis) and the role that these notions play in the Yoga philosophy, which are relevant for issues currently under discussion in contemporary western philosophy of mind. The volume compares and contrasts classical yoga philosophy with classical Samkhya and with Indian Buddhist thought. Although the primary focus of the volume is on Patanjala Yoga, the system of Hatha Yoga and other satellite systems of Yoga are discussed as well, and an attempt is made to differentiate clearly the classical system of Yoga Sastra from Hatha Yoga and the other satellite

systems. Some twenty-eight Sanskrit texts of Patanjala. Yoga are summarized or noted in the volume. Twenty-six volumes of Hatha Yoga and the texts of some other satellite systems are also included. Altogether the volume contains summaries and or notations for some seventy-five Sanskrit texts.
