Practical Spoken Dialog Systems Deborah Dahl,2007-09-28 For professional speech researchers, there is a rich technical literature covering many years of primary research in speech. However, this literature is not necessarily applicable to the needs of business people, application developers, and students who are interested in learning about the practical uses of speech technology. On the other hand, while existing introductory resources cover the basic mechanics of development of application development as well as aspects of the voice user interface, they don't go far enough in dealing with the details that have to be taken into account to make spoken dialog systems successful in practice. What's missing is information in between the in-depth technical literature and the more introductory development resources. The goal of this book is to provide information for anyone who wants to take the next step beyond the basics of current speech applications but isn't yet ready to dive into the technical literature. It is hoped that this book will help project managers, application developers, and students gain a fuller and more complete understanding of spoken dialog technology and the practical aspects of developing and deploying spoken dialog applications.

Towards Adaptive Spoken Dialog Systems Alexander Schmitt,Wolfgang Minker,2012-09-19 In Monitoring Adaptive Spoken Dialog Systems, authors Alexander Schmitt and Wolfgang Minker investigate statistical approaches that allow for recognition of negative dialog patterns in Spoken Dialog Systems (SDS). The presented stochastic methods allow a flexible, portable and accurate use. Beginning with the foundations of machine learning and pattern recognition, this monograph examines how frequently users show negative emotions in spoken dialog systems and develop novel approaches to speech-based emotion recognition using hybrid approach to model emotions. The authors make use of statistical methods based on acoustic, linguistic and contextual features to examine the relationship between the interaction flow and the occurrence of emotions using non-acted recordings several thousand real users from commercial and non-commercial SDS. Additionally, the authors present novel statistical methods that spot problems within a dialog based on interaction patterns. The approaches enable future SDS to offer more natural and robust interactions. This work provides insights, lessons and inspiration for future research and development, not only for spoken dialog systems, but for data-driven approaches to human-machine interaction in general.

User Models in Dialog Systems Alfred Kobsa,Wolfgang Wahlster,2012-12-06 User models have recently attracted much research interest in the field of artificial intelligence dialog systems. It has become evident that flexible user-oriented dialog behavior of such systems can be achieved only if the system has access to a model of the user containing assumptions about his/her background knowledge as well as his/her goals and plans in consulting the system. Research in the field of user models investigates how such assumptions can be automatically created, represented and exploited by the system in the course of an on-line interaction with the user. The communication medium in this interaction need not necessarily be a natural language, such as English or German. Formal interaction languages are also permit ted. The emphasis is placed on systems with natural language input and output, however. A dozen major and several more minor user modeling systems have been de signed and implemented in the last decade, mostly in the context of natural-language dialog systems. The goal of UM86, the first international workshop on user model ing, was to bring together the researchers working on these projects so that results could be discussed and analyzed, and hopefully general insights be found, that could prove useful for future research. The meeting took place in Maria Laach, a small village some 40 miles south of Bonn, West Germany. 25 prominent researchers were invited to participate.

Speech and Human-Machine Dialog Wolfgang Minker,Samir Bennacef,2006-04-18 Speech and Human-Machine Dialog focuses on the dialog management component of a spoken language dialog system. Spoken language dialog systems provide a natural interface between humans and computers. These systems are of special interest for interactive applications, and they integrate several technologies including speech recognition, natural language understanding, dialog management and speech synthesis. Due to the conjunction of several factors throughout the past few years, humans are significantly changing their behavior vis-à-vis machines. In particular, the use of speech technologies will become normal in the professional domain, and in everyday life. The performance of speech recognition components has also significantly improved. This book includes various examples that illustrate the different functionalities of the dialog model in a representative application for train travel information retrieval (train time tables, prices and ticket reservation). Speech and Human-Machine Dialog is designed for a professional audience, composed of researchers and practitioners in industry. This book is also suitable as a secondary text for graduate-level students in computer science and engineering.

Spoken Natural Language Dialog Systems Ronnie W. Smith,D. Richard Hipp,1995-02-02 As spoken natural language dialog systems technology continues to make great strides, numerous issues regarding dialog processing still need to be resolved. This book presents an exciting new dialog processing architecture that allows for a number of behaviors required for effective human-machine interactions, including: problem-solving to help the user carry out a task, coherent subdialog movement during the problem-solving process, user model usage, expectation usage for contextual interpretation and error correction, and variable initiative behavior for interacting with users of differing expertise. The book also details how different dialog problems in processing can be handled simultaneously, and provides instructions and in-depth result from pertinent experiments. Researchers and professionals in natural language systems will find this important new book an invaluable addition to their libraries.

Estimating Spoken Dialog System Quality with User Models Klaus-Peter Engelbrecht,2012-08-04 Spoken dialog systems have the potential to offer highly intuitive user interfaces, as they allow systems to be controlled using natural language. However, the complexity inherent in natural language dialogs means that careful testing of the system must be carried out from the very beginning of the design process. This book examines how user models can be used to support such early evaluations in two ways: by running simulations of dialogs, and by estimating the quality judgments of users. First, a design environment supporting the creation of dialog flows, the simulation of dialogs, and the analysis of the simulated data is proposed. How the quality of user simulations may be quantified with respect to their suitability for both formative and summative evaluation is then discussed. The remainder of the book is dedicated to the problem of predicting quality judgments of users based on interaction data. New modeling approaches are presented, which process the dialogs as sequences, and which allow knowledge about the judgment behavior of users to be incorporated into predictions. All proposed methods are validated with example evaluation studies.

Dialog Theory for Critical Argumentation Douglas N. Walton,2007 Because of the need to devise systems for electronic communication on the internet, multi-agent computing is moving to a model of communication as a structured conversation between rational agents. For example, in multi-agent systems, an electronic agent searches around the internet, and collects certain kinds of information by asking questions to other agents. Such agents also reason with each other when they engage in negotiation and persuasion. It is shown in this book that critical argumentation is best represented in this framework by the model of reasoned argument called a dialog, in which two or more parties engage in a polite and orderly exchange with each other according to rules governed by conversation policies. In such dialog argumentation, the two parties reason together by taking turns asking questions, offering replies, and offering reasons to support a claim. They try to settle their disagreements by an orderly conversational exchange that is partly adversarial and partly collaborative.

Dialog Systems Teresa Lopez-Soto,2021-03-10 This book focuses on dialog from a varied combination of fields: Linguistics, Philosophy of Language and Computation. It builds on the hypothesis that meaning in human communication arises at the discourse level rather than at the word level. The book offers a complex analytical framework and integration of the central areas of research

around human communication. The content revolves around meaning but it also gives evidence of the connection among different points of view. Besides discussing issues of general interest to the field, the book triggers theoretical argumentation that is currently under scientific discussion. It examines such topics as immanent reasoning joined with Recanati's lekta and free enrichment, challenges of internet conversation, inner dialogs, cognition and language, and the relation between assertion and denial. It proposes a dialogical framework for intra-negotiation and gives a geolinguistic perspective on spoken discourse. Finally, it examines dialog and abduction and sheds light on a generation of dialog contexts by means of multimodal logic applied to speech acts.

Extinction Dialogs Carolyn Baker,Guy Randall McPherson,2014-08-25 Extinction Dialogs provides the unvarnished truth on what is actually happening in regards to global warming, the world, and humanity. There is no doubt that many will consider Extinction Dialogs a true to life horror story, but all are strongly advised to read it, except for the faint of heart.

Human Language Technologies – The Baltic Perspective A. Utka,J. Vaičenonienė,J. Kovalevskaitė,2020-09-30 Human language technology is the study of the methods by which computer programs or electronic devices can analyze, produce, modify or respond to human texts and speech. It consists of natural language processing and computational linguistics on the one hand, and speech technology on the other. This book presents the proceedings of the 9th International Conference, Human Language Technologies – The Baltic Perspective (Baltic HLT 2020), organised in Kaunas, Lithuania on 22 and 23 September 2020. This biennial conference offers researchers a platform to share knowledge on recent advances in human language processing for the Baltic languages, as well as promoting interdisciplinary and international cooperation in human language-technology research within and beyond the Baltic States. In addition to the traditional topics of natural language processing and language technologies, this year's conference featured a special session on resource and tool development for teaching and learning the less resourced Baltic languages. This year, 42 submissions were received, each of which was evaluated by two reviewers, resulting in a total of 34 papers being accepted for presentation and publication. The book is divided into four sections: speech and text analysis (9 papers); machine translation and natural understanding (6 papers); tools and resources (14 papers); and language learning resources (5 papers). Providing a fascinating overview of current research in the field from a primarily Baltic perspective, the book will be of interest to all those whose work involves human language technology.

Usability of Speech Dialog Systems Thomas Hempel,2008-04-04 Before designing a speech application system, three key questions have to be answered: who will use it, why and how often? This book focuses on these high-level questions and gives a criteria of when and how to design speech systems. After an introduction, the state-of-the-art in modern voice user interfaces is displayed. The book goes on to evolve criteria for designing and evaluating successful voice user interfaces. Trends in this fast growing area are also presented.

The Book of Dialogue Lewis Turco,2020-09-01 The Book of Dialogue is an invaluable resource for writers and students of narrative seeking to master the art of effective dialogue. The book will teach you how to use dialogue to lay the groundwork for events in a story, to balance dialogue with other story elements, to dramatize events through dialogue, and to strategically break up dialogue with other vital elements of your story in order to capture and hold a reader's or viewer's interest in the overall arc of the narrative. Writers will find Turco's classic an essential reference for crafting dialogue. Using dialogue to teach dialogue, Turco's chapters focus on narration, diction, speech, and genre dialogue. Through the Socratic dialogue method—invented by Plato in his dialogues outlining the teachings of Socrates—Turco provides an effective tool to teach effective discourse. He notes, "Plato wrote lies in order to tell the truth. That's what a fiction writer does and has always done." Now it's your turn.

The Dispelling of Big Jim Sterling C. Brewer,1905

The Mahfouz Dialogs Gamal al-Ghitani,2007-12-01 The Mahfouz Dialogs records the memories, views, and jokes of Naguib Mahfouz on subjects ranging from politics to the relationship between his novels and his life, as delivered to intimate friends at a series of informal meetings stretching out over almost half a century. Mahfouz was a pivotal figure not only in world literature (through being awarded the Nobel prize for literature in 1988 he became the first writer in Arabic to win a mass audience), but also in his own society, where he vastly enhanced the image of the writer in the eyes of the public and encapsulated as the victim of a savage attack on his life by an Islamist in 1994 the struggle between pluralism, tolerance, and secularism on the one hand and extremist Islam. Moderated by Gamal al-Ghitani, a writer of a younger generation who shared a common background with Mahfouz (al-Ghitani also grew up in medieval Cairo) and felt a vast personal empathy for the writer despite their sometimes different views, these exchanges throw new light on Mahfouz's life, the creation of his novels, and literary Egypt in the second half of the twentieth century.
