What is an Image? James Elkins, 2011 Brings together historians, philosophers, critics, postcolonial theorists, and curators to ask how images, pictures, and paintings are conceptualized. Issues discussed include concepts such as image and picture in and outside the West; semiotics; whether images are products of discourse; religious meanings; and the ethics of viewing--Provided by publisher.

The Absent Image Elina Gertsman, 2021-06-24 Winner of the 2022 Charles Rufus Morey Award from the College Art Association Guided by Aristotelian theories, medieval philosophers believed that nature abhors a vacuum. Medieval art, according to modern scholars, abhors the same. The notion of horror vacui—the fear of empty space—is thus often construed as a definitive feature of Gothic material culture. In The Absent Image, Elina Gertsman argues that Gothic art, in its attempts to grapple with the unrepresentability of the invisible, actively engages emptiness, voids, gaps, holes, and erasures. Exploring complex conversations among medieval philosophy, physics, mathematics, piety, and image-making, Gertsman considers the concept of nothingness in concert with the imaginary, revealing profoundly inventive approaches to emptiness in late medieval visual culture, from ingenious images of the world's creation ex nihilo to figurations of absence as a replacement for the invisible forces of conception and death. Innovative and challenging, this book will find its primary audience with students and scholars of art, religion, physics, philosophy, and mathematics. It will be particularly welcomed by those interested in phenomenological and cross-disciplinary approaches to the visual culture of the later Middle Ages.

The Image Allison Bown,2018-07 Our lives are God's masterpiece - and He deeply enjoys the process of relational development us that reveals it. He is passionate for us to perceive clearly the beautiful and powerful image of our true identity in Christ that already His reality. But far too often, we've settled for a less valuable, inauthentic copy of the life we think God is asking of us. Difficult experiences, poor histories and a host of other negatives have defined us in ways that are not an accurate image of what God sees when He looks at you. For many years, Allison Bown and Graham Cooke have partnered together in exploring this lifestyle, teaching and training people in their true identity in Christ - seeing astonishing, lasting transformation. In The Image, Allison translates these discoveries, along with her own experience and wisdom, into writing that will allow you to have a greater encounter of life from God's perspective.

Image, Eye and Art in Calvino Birgitte Grundtvig, Martin L. McLaughlin, Lene Waage Petersen, 2007 Few recent writers have been as interested in the cross-over between texts and visual art as Italo Calvino (1923-85). Involved for most of his life in the publishing industry, he took as much interest in the visual as in the textual aspects of his own and other writers' books. In this volume twenty international Calvino experts, including Barenghi, Battistini, Belpoliti, Hofstadter, Ricci, Scarpa and others, consider the many facets of the interplay between the visual and textual in Calvino's works, from the use of colours in his fiction to the influence of cartoons, from the graphic qualities of the book covers themselves to the significance of photography and landscape in his fiction and non-

fiction. The volume is appropriately illustrated with images evoked by Calvino's major texts.

Satellite Image Analysis: Clustering and Classification Surekha Borra, Rohit Thanki, Nilanjan Dey, 2019-02-08 Thanks to recent advances in sensors, communication and satellite technology, data storage, processing and networking capabilities, satellite image acquisition and mining are now on the rise. In turn, satellite images play a vital role in providing essential geographical information. Highly accurate automatic classification and decision support systems can facilitate the efforts of data analysts, reduce human error, and allow the rapid and rigorous analysis of land use and land cover information. Integrating Machine Learning (ML) technology with the human visual psychometric can help meet geologists' demands for more efficient and higher-quality classification in real time. This book introduces readers to key concepts, methods and models for satellite image analysis; highlights state-of-the-art classification and clustering techniques; discusses recent developments and remaining challenges; and addresses various applications, making it a valuable asset for engineers, data analysts and researchers in the fields of geographic information systems and remote sensing engineering.

The Ground of the Image Jean-Luc Nancy,2009-08-25 The renowned philosopher provides "noteworthy contributions to themes connected with images, imagination, representation, aesthetics, and . . . religion." —Journal of American Academy of Religion What is this power that lies in the depths and recesses of an image—which is always only an impenetrable surface? What secrets are concealed in the ground or in the figures of an image—which never does anything but show just exactly what it is and nothing else? How does the immanence of images open onto their unimaginable others, their imageless origin? In this collection of writings on images and visual art, Jean-Luc Nancy explores such questions through an extraordinary range of references. From Renaissance painting and landscape to photography and video, from the image of Roman death masks to the language of silent film, from Cleopatra to Kant and Heidegger, Nancy pursues a reflection on visuality that goes far beyond the many disciplines with which it intersects. He offers insights into the religious, cultural, political, art historical, and philosophical aspects of the visual relation, treating such vexed problems as the connection between image and violence, the sacred status of images, and, in a profound and important essay, the forbidden representation of the Shoah. In the background of all these investigations lies a preoccupation with finitude, the unsettling forces envisaged by the images that confront us, the limits that bind us to them, the death that stares back at us from their frozen traits and distant intimacies. In these vibrant and complex essays, a central figure in European philosophy continues to work through

some of the most important questions of our time.

Intelligent Image Processing in Prolog Bruce G. Batchelor, 2012-12-06 After a slow and somewhat tentative beginning, machine vision systems are now finding widespread use in industry. So far, there have been four clearly discernible phases in their development, based upon the types of images processed and how that processing is performed: (1) Binary (two level) images, processing in software (2) Grey-scale images, processing in software (3) Binary or grey-scale images processed in fast, special-purpose hardware (4) Coloured/multi-spectral images Third-generation vision systems are now commonplace, although a large number of binary and software-based grey-scale processing systems are still being sold. At the moment, colour image processing is commercially much less significant than the other three and this situation may well remain for some time, since many industrial artifacts are nearly monochrome and the use of colour increases the cost of the equipment significantly. A great deal of colour image processing is a straightforward extension of standard grey-scale methods. Industrial applications of machine vision systems can also be sub divided, this time into two main areas, which have largely retained distinct identities: (i) Automated Visual Inspection (A VI) (ii) Robot Vision (RV) This book is about a fifth generation of industrial vision systems, in which this distinction, based on applications, is blurred and the processing is marked by being much smarter (i. e. more intelligent) than in the other four generations.

Everything Is Cinema Richard Brody,2008-05-13 When Jean-Luc Godard, exemplary director of the French New Wave, wed the ideals of filmmaking to the realities of autobiography and current events, he changed the nature of cinema. Among the greatest cinematic innovations, Godard's films shift fluidly from fiction to documentary, from criticism to art. Similarly, his persona projects shifting images - cultural hero, impassioned loner, shrewd businessman. Hailed by filmmakers as a - if not the - key influence, Godard has entered the modern canon, a figure as mysterious as he is indispensable. In Everything is Cinema, critic Richard Brody has amassed hundreds of interviews with friends, family, and collaborators to demystify the elusive director and paint the fullest picture yet of his life and work. Paying as much attention to Godard's revolutionary technical inventions as to the political and emotional

forces of the postwar world, Brody traces an arc from the director's early critical writing, through his popular success with Breathless and Contempt, to the grand vision of his later years. He vividly depicts Godard's wealthy, conservative family, his fluid and often disturbing politics, his tumultuous dealings with fellow filmmakers, and his troubled relations with women.--Jacket.

Remote Sensing Image Fusion Christine Pohl, John van Genderen, 2016-10-03 Remote Sensing Image Fusion: A Practical Guide gives an introduction to remote sensing image fusion providing an overview on the sensors and applications. It describes data selection, application requirements and the choice of a suitable image fusion technique. It comprises a diverse selection of successful image fusion cases that are relevant to other users and other areas of interest around the world. The book helps newcomers to obtain a quick start into the practical value and benefits of multi-sensor image fusion. Experts will find this book useful to obtain an overview on the state of the art and understand current constraints that need to be solved in future research efforts. For industry professionals the book can be a great introduction and basis to understand multisensor remote sensing image exploitation and the development of commercialized image fusion software from a practical perspective. The book concludes with a chapter on current trends and future developments in remote sensing image fusion. Along with the book, RSIF website provides additional up-to-date information in the field.

RGB-D Image Analysis and Processing Paul L. Rosin, Yu-Kun Lai, Ling Shao, Yonghuai Liu, 2019-10-26 This book focuses on the fundamentals and recent advances in RGB-D imaging as well as covering a range of RGB-D applications. The topics covered include: data acquisition, data quality assessment, filling holes, 3D reconstruction, SLAM, multiple depth camera systems, segmentation, object detection, salience detection, pose estimation, geometric modelling, fall detection, autonomous driving, motor rehabilitation therapy, people counting and cognitive service robots. The availability of cheap RGB-D sensors has led to an explosion over the last five years in the capture and application of colour plus depth data. The addition of depth data to regular RGB images vastly increases the range of applications, and has resulted in a demand for robust and real-time processing of RGB-D data. There remain many technical challenges, and RGB-D image processing is an ongoing research area. This book covers the full state of the art, and consists of a series of chapters by internationally renowned experts in the field. Each chapter is written so as to provide a detailed overview of that topic. RGB-D Image Analysis and Processing will enable both students and professional developers alike to quickly get up to speed with contemporary techniques, and apply RGB-D imaging in their own projects.

Front-End Vision and Multi-Scale Image Analysis Bart M. Haar Romeny, 2008-10-24 Many approaches have been proposed to solve the problem of finding the optic flow field of an image sequence. Three major classes of optic flow computation techniques can discriminated (see for a good overview Beauchemin and Barron IBeauchemin19951): gradient based (or differential) methods; phase based (or frequency domain) methods; correlation based (or area) methods; feature point (or sparse data) tracking methods; In this chapter we compute the optic flow as a dense optic flow field with a multi scale differential method. The method, originally proposed by Florack and Nielsen [Florack1998a] is known as the Multiscale Optic Flow Constrain Equation (MOFCE). This is a scale space version of the well known computer vision implementation of the optic flow constraint equation, as originally proposed by Horn and Schunck [Horn1981]. This scale space variation, as usual, consists of the introduction of the aperture of the observation in the process. The application to stereo has been described by Maas et al. [Maas 1995a, Maas 1996a]. Of course, difficulties arise when structure emerges or disappears, such as with occlusion, cloud formation etc. Then knowledge is needed about the processes and

objects involved. In this chapter we focus on the scale space approach to the local measurement of optic flow, as we may expect the visual front end to do. 17. 2 Motion detection with pairs of receptive fields As a biologically motivated start, we begin with discussing some neurophysiological findings in the visual system with respect to motion detection.

Writing the Image After Roland Barthes Jean-Michel Rabate, Jean-Michel Rabaté, 2012-05-23 In the final stages of his career, Roland Barthes abandoned his long-standing suspicion of photographic representation to write Camera Lucida, at once an elegy to his dead mother and a treatise on photography. In Writing the Image After Roland Barthes, Jean-Michel Rabaté and nineteen contributors examine the import of Barthes's shifting positions on photography and visual representation and the impact of his work on current developments in cultural studies and theories of the media and popular culture.

Created in God's Image Anthony A. Hoekema,1994-09-06 ccording to Scripture, humankind was created in the image of God. Hoekema discusses the implications of this theme, devoting several chapters to the biblical teaching on God's image, the teaching of philosophers and theologians through the ages, and his own theological analysis. Suitable for seminary-level anthropology courses, yet accessible to educated laypeople. Extensive bibliography, fully indexed.

The Discarded Image C. S. Lewis,1994-08-26 Hailed as the final memorial to the work of a great scholar and teacher and a wise and noble mind, this work paints a lucid picture of the medieval world view, as historical and cultural background to the literature of
