Lunar Sourcebook Grant Heiken, David Vaniman, Bevan M. French, 1991-04-26 The only work to date to collect data gathered during the American and Soviet missions in an accessible and complete reference of current scientific and technical information about the Moon.

Lunar Science: A Post - Apollo View Stuart Ross Taylor, 2016-06-06 Lunar Science: A Post-Apollo View: Scientific Results and Insights from the Lunar Samples explains the scientific results and discoveries of the manned Apollo lunar missions as they are understood. The emphasis is less on sample description and data and more on the interpretative aspects of the study, with the aim of providing a coherent story of the evolution of the moon and its origin as revealed by the lunar samples and the Apollo missions. This text has seven chapters; the first of which provides a historical background of efforts to study the moon prior to the Apollo missions, including lunar photogeologic mapping and direct exploration by spacecraft. Attention then turns to the Apollo missions and the lunar samples collected, beginning with Apollo 11 that landed on the moon on July 20, 1969 and followed by more missions. The next chapter describes the geology of the moon, with emphasis on craters, central peaks and peak rings, the large ringed basins, rilles, and maria lava flows. The reader is also introduced to the nature of the lunar surface material, the maria basalts, the highlands, and the moon's interior. This book concludes with a discussion on the evidence that has been gathered by the Apollo missions that offers insights into the origin and evolution of the moon. An epilogue reflects on the usefulness of manned space flight. This book will appeal to lunar scientists as well as to those with an interest in astronomy and space exploration.

To the Moon Carol Ann Duffy, 2009-10-02 Carol Ann Duffy's beautiful anthology features an eclectic mix of poems that chart human fascination with the moon across the centuries and around the world. Carol Ann Duffy on *To the Moon*: 'Editing *Answering Back*, in which living poets replied to poems from the past, I was astonished to see how many of the poems, old and new, referred to the moon. I then started to keep a record of such references, and from my notebook, I see that in one morning alone I came across no fewer than nine poems, from the likes of Coleridge, Graves, Rossetti and Rowe - and it was this selection that initially inspired *To the Moon*. There's something incredibly moving, and electrifying, to read a poem from the Chinese Book of Odes, written around 500 BC, and to feel both our distance from and our closeness to the past, and the Moon itself: I climbed the hill just as the new moon showed, I saw him coming on the southern road. My heart lays down its load. In collecting together poems such as these - poems that span continents and centuries - *To the Moon* shows what it is to be human; to love, to lose, to dream and to hope. The poems it contains give us a real and profound sense of our time on this planet, and the pleasures they offer are - like space itself - infinite.'

Moon Bernd Brunner,2010-11-18 Using werewolves and Wernher von Braun, Stonehenge and the sex lives of sea corals, aboriginal myths, and an Anglican bishop in this new book, the author weaves variegated information into a glimpse of Earth's closest celestial neighbor, whose mere presence inspires us to wonder what might be out there. Going beyond the discoveries of contemporary science, he presents a cultural assessment of our complex relationship with Earth's lifeless, rocky satellite. As well as offering an engaging perspective on such age old questions as

What would Earth be like without the moon? he surveys the moon's mythical and religious significance and provokes existential soul searching through a lunar lens, inquiring, Forty years ago, the first man put his footprint on the moon. Will we continue to use it as the screen onto which we cast our hopes and fears? Drawing on materials from different cultures and epochs, he walks readers down a moonlit path illuminated by more than seventy-five vintage photographs and illustrations. From scientific discussions of the moon's origins and its chronobiological effects on the mating and feeding habits of animals to an illuminating interpretation of Bishop Francis Godwin's 1638 novel *The Man in the Moone*, his interdisciplinary explorations recast a familiar object in an original light.
