**Perfect Password** Mark Burnett, 2006-01-09 User passwords are the keys to the network kingdom, yet most users choose overly simplistic passwords (like password) that anyone could guess, while system administrators demand impossible to remember passwords littered with obscure characters and random numerals. Every computer user must face the problems of password security. According to a recent British study, passwords are usually obvious: around 50 percent of computer users select passwords based on names of a family member, spouse, partner, or a pet. Many users face the problem of selecting strong passwords that meet corporate security requirements. Too often, systems reject user-selected passwords because they are not long enough or otherwise do not meet complexity requirements. This book teaches users how to select passwords that always meet complexity requirements. A typical computer user must remember dozens of passwords and they are told to make them all unique and never write them down. For most users, the solution is easy passwords that follow simple patterns. This book teaches users how to select strong passwords they can easily remember. \* Examines the password problem from the perspective of the administrator trying to secure their network \* Author Mark Burnett has accumulated and analyzed over 1,000,000 user passwords and through his research has discovered what works, what doesn't work, and how many people probably have dogs named Spot \* Throughout the book, Burnett sprinkles interesting and humorous password ranging from the Top 20 dog names to the number of references to the King James Bible in passwords

Please browse this page through Computer and look inside for better understanding if you are still confused. A password organizer of some sort is essential these days, to help you keep track of the myriad of passwords that you have set up for websites, online accounts and more. ■ **YOU CAN'T REMEMBER EVERYTHING** First, even if you think you can remember all those passwords, frankly, you can't. Everyone's mind slips sometimes, and you may not log in to certain accounts but once or twice a year, making it difficult under the best circumstances. ■ **NOT ONLY PASSWORDS BUT YOU SHOULD RECORD OTHER INFORMATION** Second, it isn't just the passwords you need to sometimes know, but also usernames, what email address you have associated with the account, the name or web address of where to log in, or a myriad of other information. ■ **WITHOUT ORGANIZER YOU CAN'T SHARE ACCESS TO YOUR TRUSTED ONES** Third, what happens if you're incapacitated for a while? We all should have Plan B in our lives. What will happen if you die suddenly and your beloved and clozed ones can't access to your information that you want them to handle on your absence. Or how would a trusted friend or loved one be able to access the sometimes vital information within these accounts if you are unable to do so if you haven't given them some type of information to go by.
