  Tutorials in Chemoinformatics Alexandre Varnek,2017-08-14 30 tutorials and more than 100 exercises in chemoinformatics, supported by online software and data sets Chemoinformatics is widely used in both academic and industrial chemical and biochemical research worldwide. Yet, until this unique guide, there were no books offering practical exercises in chemoinformatics methods. Tutorials in Chemoinformatics contains more than 100 exercises in 30 tutorials exploring key topics and methods in the field. It takes an applied approach to the subject with a strong emphasis on problem-solving and computational methodologies. Each tutorial is self-contained and contains exercises for students to work through using a variety of software packages. The majority of the tutorials are divided into three sections devoted to theoretical background, algorithm description and software applications, respectively, with the latter section providing step-by-step software instructions. Throughout, three types of software tools are used: in-house programs developed by the authors, open-source programs and commercial programs which are available for free or at a modest cost to academics. The in-house software and data sets are available on a dedicated companion website. Key topics and methods covered in Tutorials in Chemoinformatics

include: Data curation and standardization Development and use of chemical databases Structure encoding by molecular descriptors, text strings and binary fingerprints The design of diverse and focused libraries Chemical data analysis and visualization Structure-property/activity modeling (QSAR/QSPR) Ensemble modeling approaches, including bagging, boosting, stacking and random subspaces 3D pharmacophores modeling and pharmacological profiling using shape analysis Protein-ligand docking Implementation of algorithms in a high-level programming language Tutorials in Chemoinformatics is an ideal supplementary text for advanced undergraduate and graduate courses in chemoinformatics, bioinformatics, computational chemistry, computational biology, medicinal chemistry and biochemistry. It is also a valuable working resource for medicinal chemists, academic researchers and industrial chemists looking to enhance their chemoinformatics skills.

Successfully Producing Tutorials and Online Courses Markus Peter,2016-06-20 Many tutorials and online courses transfer knowledge on interesting and important topics. Often the creators are indeed experts in their field, but have no idea of how knowledge is transferred properly and which aspects need to be considered when creating good online media. The result is often devastating. Bounce rates of up to 90% are the norm on many courses. Actual interesting content is not perceived because the form of presentation puts prospects to flight. In this book the experienced adult educator and online tutor, Markus Peter, presents the basics of knowledge transfer and provides

the reader with tools for creating more professional and more attractive course content. The results are impressive: Over 50% more feedback, and better feedback for courses that have implemented the approach, is a convincing argument.

   <u>The Java Tutorial</u> Sharon Biocca Zakhour,Sowmya Kannan,Raymond Gallardo,2013-02-27 The Java®Tutorial, Fifth Edition, is based on Release 7 of the Java Platform Standard Edition. This revised and updated edition introduces the new features added to the platform, including a section on NIO.2, the new file I/O API, and information on migrating legacy code to the new API. The deployment coverage has also been expanded, with new chapters such as "Doing More with Rich Internet Applications" and "Deployment in Depth," and a section on the fork/join feature has been added to the chapter on concurrency. Information reflecting Project Coin developments, including the new try-with-resources statement, the ability to catch more than one type of exception with a single exception handler, support for binary literals, and diamond syntax, which results in cleaner generics code, has been added where appropriate. The chapters covering generics, Java Web Start, and applets have also been updated. In addition, if you plan to take one of the Java SE 7 certification exams, this guide can help. A special appendix, "Preparing for Java Programming Language Certification," lists the three exams available, details the items covered on each exam, and provides cross-references to where more information about each topic appears in the text.

All of the material has been thoroughly reviewed by members of Oracle Java engineering to ensure that the information is accurate and up to date.

  The Survey of Best Practices in Developing Online Information Literacy Tutorials 06/2013 Primary Research Group,2013 The Survey of Best Practices in Developing Online Information Literacy Tutorials is a benchmarking report for online tutorial development, presenting a wealth of information on the practices involved in and the cost of developing online information literacy tutorials. The 285-page report also looks at how tutorials are marketed and accessed, and at popular access points such as Facebook, the library website and others, as well as how tutorials are used in for-credit classes and more ad-hoc use. The study looks at how tutorial designers are trained, and at how they inter-relate to non-library departments and other departments of the library. The study also looks at the use of tutorials of other colleges and vendor-produced tutorials, and at efforts to evaluate how students use tutorials, and how colleges should make decisions on what kinds of tutorials to produce and how to best produce them. The questionnaire for the report was largely developed by librarians at the University of Arizona libraries.
