Estetyka chmur Tymoteusz Andrearczyk ,2019-07-18 Tymoteusz Andrearczyk Autor ukazuje różnorodność koncepcji filozoficznych, które poszerzają perspektywę pola estetycznego, włączając w nie obszary wykraczające poza tradycyjny model sztuki. Teatr angażujący widza w przedstawienie, instalacja, której stajemy się częścią, zjawiskowość chmur na niebie pokazują, jak można w inny sposób wartościować estetycznie, wyłamując się spod konwencjonalnych zasad oglądu. Znajdziemy tu namysł nad doświadczeniem zjawiska atmosferycznego, omawianego w tradycji pokantowskiej, Jean-François Lyotarda oraz Maurice’a Merleau-Ponty’ego, i nad wydobytym z tego doświadczenia obrazem chmur, dla którego podporą stała się teoria obrazu zaczerpnięta z prac Hansa Beltinga i Georges’a Didi-Hubermana. Kategorie estetyczne zarysowane w książce służą odczytaniu różnorodnych kontekstów, treści i obrazów, powstających na styku kultury i zjawiska atmosferycznego chmur i obłoków. Tymoteusz Andrearczyk, ur. w 1978 r. w Starogardzie Gdańskim. Ukończył filozofię na Uniwersytecie im. Adama Mickiewicza w Poznaniu oraz malarstwo na Akademii Sztuk Pięknych w Gdańsku. W 2018 r. na UAM w Poznaniu w Instytucie Filozofii obronił pracę doktorską Estetyka chmur i obłoków. Studium z filozofii kultury. Regularnie publikuje artykuły w kwartalniku Panacea w cyklu „Natura i Sztuka”. Jego dzieła malarskie prezentowane są na aukcjach i wystawach, trafiają do kolekcji prywatnych. Autor jest także starszym rybakim morskim zameldowanym w przystani Chłapowo. W wolnych chwilach praktykuje wspinaczkę wysokogórską.

Cirrus David K. Lynch,2002 This text, devoted entirely to cirrus clouds, captures the state of knowledge of cirrus clouds and serves as a practical handbook as well.

Cloud Nucleation C. Guy Suits,2013-10-22 The Collected Works of Irving Langmuir, Volume 11: Cloud Nucleation presents the papers written by Dr. Irving Langmuir on the study of artificial nucleation of clouds to produce precipitation. The compilation provides the study of every possible aspect of cloud and weather modification. This volume contains chapters that are devoted to the discussion of such subjects as the nucleation of clouds with dry ice; the analysis of photographic data showing the effects produced by supercooled clouds with ice nuclei; the production of rain by a chain reaction in cumulus clouds at temperatures above freezing; nucleation of clouds with silver iodide; and basic discoveries underlying weather modification. Meteorologists will find the book interesting and invaluable.

Cloud and Precipitation Microphysics Jerry M. Straka,2009-06-11 This book focuses specifically on bin and bulk parameterizations for the prediction of cloud and precipitation at various scales - the cloud scale, mesoscale, synoptic scale, and the global climate scale. It provides a background to the fundamental principles of parameterization physics, including processes involved in the production of clouds, ice particles, liquid water, snow aggregate, graupel and hail. It presents full derivations of the parameterizations, allowing readers to build parameterization packages, with varying levels of complexity based on information in the book. Architectures for a range of dynamical models are given, in which parameterizations form a significant tool for investigating large non-linear numerical systems. Model codes are available online at www.cambridge.org/9780521883382. Written for researchers and advanced students of cloud and precipitation microphysics, this book is also a valuable reference for all atmospheric scientists involved in models of numerical weather prediction.

EqueTrip Psoras,2014-01-29 Grupa broniaków jedzie do Equestrii na tygodniową wycieczkę. W planach nie ma żadnego ratowania świata, żadnych epickich przygód, żadnych czarnych charakterów ani żadnych magicznych pojedynków. Tylko zwiedzanie krainy przez siedem zwyczajnych dni... Ale czy w Equestrii istnieje coś takiego jak zwyczajny dzień? I czy osoby, dla których kucyki pełnią istotną rolę w życiu, będą się umiały trzymać z dala od kłopotów?

Shallow Clouds, Water Vapor, Circulation, and Climate Sensitivity Robert Pincus,David Winker,Sandrine Bony,Bjorn Stevens,2018-05-29 This volume presents a series of overview articles arising from a workshop exploring the links among shallow clouds, water vapor, circulation, and climate sensitivity. It provides a state-of-the art synthesis of understanding about the coupling of clouds and water vapor to the large-scale circulation. The emphasis is on two phenomena, namely the self-aggregation of deep convection and interactions between low clouds and the large-scale environment, with direct links to the sensitivity of climate to radiative perturbations. Each subject is approached using simulations, observations, and synthesizing theory; particular attention is paid to opportunities offered by new remote-sensing technologies, some still prospective. The collection provides a thorough grounding in topics representing one of the World Climate Research Program’s Grand Challenges. Previously published in *Surveys in Geophysics*, Volume 38, Issue 6, 2017 The articles “Observing Convective Aggregation”, “An Observational View of Relationships Between Moisture Aggregation, Cloud, and Radiative Heating Profiles”, “Implications of Warm Rain in Shallow Cumulus and Congestus Clouds for Large-Scale Circulations”, “A Survey of Precipitation-Induced Atmospheric Cold Pools over Oceans and Their Interactions with the Larger-Scale Environment”, “Low-Cloud Feedbacks from Cloud-Controlling Factors: A Review”, “Mechanisms and Model Diversity of Trade-Wind Shallow Cumulus Cloud Feedbacks: A Review”, “Structure and Dynamical Influence of Water Vapor in the Lower Tropical Troposphere”, “Emerging Technologies and Synergies for Airborne and Space-Based Measurements of Water Vapor Profiles”, “Observational Constraints on Cloud Feedbacks: The Role of Active Satellite Sensors”, and “EUREC4A: A Field Campaign to Elucidate the Couplings Between Clouds, Convection and Circulation” are available as open access articles under a CC BY 4.0 license at link.springer.com.

Park Range Atmospheric Water Resources Program E. Bollay Associates,1967 With many biographical-critical entries and nearly 100 topical articles all written by

experts in the field, The Continuum Encyclopedia of Children's Literature is the most complete and up-to-date single-volume reference source on the subject. The work covers 150 years of children's literature in many cultures: The United States, Great Britain, Canada, continental Europe, Australia, New Zealand, Africa, and Asia. Biographical-critical entries include authors as well as illustrators. A distinguished board of advisers, made up of scholars, editors, librarians, authors, and artists, has helped make this encyclopedia even more user-friendly.

Rollo's Philosophy Jacob Abbott,1855

Thermodynamics of Clouds Louis Doufour,2012-12-02 Thermodynamics of Clouds is Volume 6 of the International Geophysics Series. This volume is an attempt to be a single reference of meteorological works of thermodynamical problems in relation to surface tension and adsorption. Numerous applications of various formulas accompany the text for further understanding of the reader to the concepts featured. The book is divided into 13 chapters where Chapters 1-6 serve as the first part of the book and the second part is from Chapter 7 to Chapter 13. The first part generally discusses and establishes the general formulas of the thermodynamics of surfaces. The method used by the authors is the one by Defay and Prigogine of studying systems in a state of partial equilibrium. The second part of the volume applies the general formulas established in Chapters 1-6 into some meteorological problems such as studies of a droplet or ice crystal suspended in the atmosphere. The text can be used by both graduate and undergraduate students with interest in thermodynamics and climate studies. Professionals such as meteorologists can also use this book as reference in solving some meteorological problems.

A New NASA/MSFC Mission Analysis Global Cloud Cover Data Base S. C. Brown,W. R. Jeffries,1985 A global cloud cover data set, derived from the USAF 3D NEPH Analysis, was developed for use in climate studies and for Earth viewing applications. This data set contains a single parameter - total sky cover - separated in time by 3 or 6 hour intervals and in space by approximately 50 nautical.miles. Cloud cover amount is recorded for each grid point (of a square grid) by a single alphanumeric character representing each 5 percent increment of sky cover. The data are arranged in both quarterly and monthly formats. The data base currently provides daily, 3-hr observed total sky cover for the Northern Hemisphere from 1972 through 1977 less 1976. For the Southern Hemisphere, there are data at 6-hr intervals for 1976 through 1978 and at 3-hr intervals for 1979 and 1980. More years of data are being added. To validate the data base, the percent frequency of $\sigma = 0.3$ and $\sigma = 0.8$ cloud cover was compared with ground observed cloud amounts at several locations with generally good agreement. Mean or other desired cloud amounts can be calculated for any time period and any size area from a single grid point to a hemisphere. The data base is especially useful in evaluating the consequence of cloud cover on Earth viewing space missions. The temporal and spatial frequency of the data allow simulations that closely approximate any projected viewing mission. No adjustments are required to account for cloud continuity.

Some Theoretical Problems Concerning the Microphysical Processes of Precipitation, Cloud, and Fog Koo Chen-Chao,1968 The monograph presents the results of investigations of the theoretical problems concerning the microphysics of precipitation processes, cloud, and fog. The studies, based mainly on observational data over China, involve the growth of gigantic salt nuclei and rainfall from warm clouds. The former plays an important role in the evolution of precipitation processes whereas a knowledge of the latter is much needed in theoretical investigations and the systematic description of actual conditions over China. Some articles are devoted to studies of the influence of convective bubbles on the micro-physical processes of precipitation, while others deal with problems on the second peak in the spectral profile of raindrops, which is a prominent feature in observations within clouds. Problems on the superadiabatic concentration of moisture are also treated. The analysis of the above problems will lead to a better understanding of the micro-physics of precipitation, cloud, and fog and provides useful clues for further investigations in this field. It will be helpful in problems on increasing the efficiency of artificial stimulation of precipitation. This monograph may also serve as a reference text for students and teachers in higher educational institutions.
