Ecocity Berkeley Richard Register,1987 Ecocity Berkeley offers innovative city planning solutions that would work anywhere, but the book offers a vision of what the future can be like with a fair amount of planning beforehand. This book is very inspirational, and could be used to advocate similar planning improvements in any large city. This book is meant for anyone interested in environmental activism, and anyone looking for serious innovations in their city.

**The Encyclopaedia Britannica** Hugh Chisholm,1911

The Cities Book Lonely Planet Kids,Bridget Gleeson,Nicola Williams,Karla Zimmerman,Heather Carswell,Patrick Kinsella,Hugh McNaughtan,2016-09-01 Take a trip through 86 of the world's greatest cities. A mix of photography, beautiful illustrations and hand drawn maps take readers on an incredible world tour. Each page is packed with facts on city living - from food and festivals to architecture and history. This stunning compendium of cities is the perfect gift for curious kids everywhere.

**Two Cities** Cynthia Zarin,2020-08-11 From acclaimed poet and New Yorker writer Cynthia Zarin comes a deeply personal meditation on two cities, Venice and Rome—each a work of art, both a monument to the past—and on how love and loss shape places and spaces. Here we encounter a writer deeply engaged with narrative in situ—a traveler moving through beloved streets, sometimes accompanied, sometimes solo. With her, we see, anew, the Venice Biennale, the Lagoon, and San Michele, the island of the dead; the Piazza di Spagna, the Tiber, the view from the Gianicolo; the pigeons at San Marco and the parrots in the Doria Pamphili. As a poet first and foremost, Zarin's attention to the smallest details, the loveliest gesture, brings Venice and Rome vividly to life for the reader. The sixteenth book in the expanding, renowned ekphrasis series, Two Cities creates space for these two historic cities to become characters themselves, their relationship to the writer as real as any love affair.

The Cities Book Lonely Planet Publications (Firm),2009 Cities represent civilisation and human achievement: they are bubbling microcosms of virtues and vices, vanguards of technology and creative pursuits, incubators of traditions and melting-pots of diversity. More than half the world's population now lives in cities, and for travellers they hold an-endless fascination. Here we present the 200 most vibrant, diverse, hypnotic and chaotic cities in the world, ranked in order as voted for by people who know - Lonely Planet's staff, authors, and readers. The list is as diverse as the people that created it. Of course, there are the usual suspects: Paris, London, New York - but also the unfamiliar, the exotic, and the tiny: Abuja (Nigeria), Nuuk (Greenland), Saint-Denis (Réunion) and Ulaanbaatar (Mongolia). Every city has its own personality, in the form of its streets and buildings and in its human architecture. Taking our cue from the buzz on the street, we have captured the flavour of each city through the eyes of the typical citizen: hot conversation topics, urban myths, the best places to eat and drink and to seek out after dark. It's a tempting cocktail for the urban adventurer.

**Peculiarities of American Cities** Willard W. Glazier,1886

Edge City Joel Garreau,2011-07-27 First there was downtown. Then there were suburbs. Then there were malls. Then Americans launched the most sweeping change in 100 years in how they live, work, and play. The Edge City.

Invisible Cities Italo Calvino,2013-08-12 Italo Calvino's beloved, intricately crafted novel about an Emperor's travels—a brilliant journey across far-off places and distant memory. “Cities, like dreams, are made of desires and fears, even if the thread of their discourse is secret, their rules are absurd, their perspectives deceitful, and everything conceals something else.” In a garden sit the aged Kublai Khan and the young Marco Polo—Mongol emperor and Venetian traveler. Kublai Khan has sensed the end of his empire coming soon. Marco Polo diverts his host with stories of the cities he has seen in his travels around the empire: cities and memory, cities and desire, cities and designs, cities and the dead, cities and the sky, trading cities, hidden cities. As Marco Polo unspools his tales, the emperor detects these fantastic places are more than they appear.

**Climate Change and U.S. Cities** William D. Solecki,Cynthia Rosenzweig,2022-02-08 Approximately 80% of the U.S. population now lives in urban metropolitan areas, and this number is expected to grow significantly in the coming years. At the same time, the built infrastructure sustaining these populations has become increasingly vulnerable to climate change. Stresses to existing systems, such as buildings, energy, transportation, water, and sanitation are growing. If the status quo continues, these systems will be unable to support a high quality of life for urban residents over the next decades, a vulnerability exacerbated by climate change impacts. Understanding this dilemma and identifying a path forward is particularly important as cities are becoming leading agents of climate action. Prepared as a follow-up to the Fourth National Climate Assessment (NCA), Climate Change and U.S. Cities documents the current understanding of existing and future climate risk for U.S. cities, urban systems, and the residents that depend on them. Beginning with an examination of the existing science since 2012, chapters develop connections between existing and emerging climate risk, adaptation planning, and the role of networks and organizations in facilitating climate action in cities. From studies revealing disaster vulnerability among low-income populations to the development of key indicators for tracking climate change, this is an essential, foundational analysis. Importantly, the assessment puts a critical emphasis on the cross-cutting factors of economics, equity, and governance. Urban stakeholders and decision makers will come away with a full picture of existing climate risks and a set of conclusions and recommendations for action. Many cities in the United States still have not yet planned for climate change and the costs of inaction are great. With bold analysis, Climate Change and U.S. Cities reveals the need for action and the tools that cities must harness to effect decisive, meaningful change.

**Modal Cities** George Bernard Pidot,John W. Sommer,1974 Publisher's description: W.B. Yeats is widely regarded as the greatest English-language poet of the twentieth century. This new critical biography seeks to tell the story of his life as it unfolded in the various contexts in which Yeats worked as an artist and as public figure.

**The Death and Life of Great American Cities** Jane Jacobs,2000 Conventional city planning holds that cities decline because they are blighted by over-crowding, by old buildings and narrow streets, and by mixtures of commercial and residential use. Crowded neighbourhoods, it is generally stated, breed apathy and crime, discourage investment and contaminate the areas around them. The response of city planners is to tear the old neighbourhoods down, scatter their inhabitants, lay out super-blocks, and rebuild the area according to an integrated plan, with the frequent result that the crime rate rises still higher, the new neighbourhood is more lifeless than the old one, and the surrounding areas deteriorate even more, until the whole city is affected. In this groundbreaking study, Jane Jacobs offers a real alternative to conventional city planning that we have had in this century. Herself a city dweller, she asks what makes cities work, why are some neighbourhoods full of things to do and see and others dull, why is the crime rate soaring in public housing developments, and why are some of the areas condemned as slums so much more safe, stable and congenial?

Edgeless Cities Robert E. Lang,2003-02-25 Edgeless cities are a sprawling form of development that accounts for the bulk of office space found outside of downtowns. Every major metropolitan area has them: vast swaths of isolated buildings that are neither pedestrian friendly, nor easily accessible by public transit, and do not lend themselves to mixed use. While critics of urban sprawl tend to focus on the social impact of edge

cities—developments that combine large-scale office parks with major retail and housing—edgeless cities, despite their ubiquity, are difficult to define or even locate. While they stay under the radar of critics, they represent a significant departure in the way American cities are built and are very likely the harbingers of a suburban future almost no one has anticipated. *Edgeless Cities* explores America's new metropolitan form by examining the growth and spatial structure of suburban office space across the nation. Inspired by Myron Orfield's groundbreaking *Metropolitica* (Brookings, 1997), Robert Lang uses data, illustrations, maps, and photos to delineate between two types of suburban office development—bounded and edgeless. The book covers the evolving geography of rental office space in thirteen of the country's largest markets, which together contain more than 2.6 billion square feet of office space and 26,000 buildings: Atlanta, Boston, Chicago, Dallas, Denver, Detroit, Houston, Los Angeles, Miami, New York, Philadelphia, San Francisco, and Washington. Lang discusses how edgeless cities differ from traditional office areas. He also provides an overview of national, regional, and metropolitan office markets, covers ways to map and measure them, and discusses the challenges urban policymakers and practitioners will face as this new suburban form continues to spread. Until now, edgeless cities have been the unstudied phenomena of the new metropolis. Lang's conceptual approach reframes the current thinking on suburban sprawl and provides a valuable resource for future policy discussions surrounding smart growth issues.

**Cities for People** Jan Gehl,2013-03-05 For more than forty years Jan Gehl has helped to transform urban environments around the world based on his research into the ways people actually use—or could use—the spaces where they live and work. In this revolutionary book, Gehl presents his latest work creating (or recreating) cityscapes on a human scale. He clearly explains the methods and tools he uses to reconfigure unworkable cityscapes into the landscapes he believes they should be: cities for people. Taking into account changing demographics and changing lifestyles, Gehl emphasizes four human issues that he sees as essential to successful city planning. He explains how to develop cities that are Lively, Safe, Sustainable, and Healthy. Focusing on these issues leads Gehl to think of even the largest city on a very small scale. For Gehl, the urban landscape must be considered through the five human senses and experienced at the speed of walking rather than at the speed of riding in a car or bus or train. This small-scale view, he argues, is too frequently neglected in contemporary projects. In a final chapter, Gehl makes a plea for city planning on a human scale in the fast-growing cities of developing countries. A “Toolbox,” presenting key principles, overviews of methods, and keyword lists, concludes the book. The book is extensively illustrated with over 700 photos and drawings of examples from Gehl’s work around the globe.

**October Cities** Carlo Rotella,2023-09-01 Returning to his native Chicago after World War II, Nelson Algren found a city transformed. The flourishing industry, culture, and literature that had placed prewar Chicago at center stage in American life were entering a time of crisis. The middle class and economic opportunity were leaving the inner city, and Black Southerners arriving in Chicago found themselves increasingly estranged from the nation's economic and cultural resources. For Algren, Chicago was becoming an October sort of city even in the spring, and as Carlo Rotella demonstrates, this metaphorical landscape of fall led Algren and others to forge a literary form that traced the American city's transformation. Narratives of decline, like the complementary narratives of black migration and inner-city life written by Claude Brown and Gwendolyn Brooks, became building blocks of the postindustrial urban literature. *October Cities* examines these narratives as they played out in Chicago, Philadelphia, and Manhattan. Through the work of Algren, Brown, Brooks, and other urban writers, Rotella explores the relationship of this new literature to the cities it draws upon for inspiration. The stories told are of neighborhoods and families molded by dramatic urban transformation on a grand scale with vast movements of capital and people, racial succession, and an intensely changing urban landscape.

*Smart Cities: Big Data, Civic Hackers, and the Quest for a New Utopia* Anthony M. Townsend,2013-10-07 An unflinching look at the aspiring city-builders of our smart, mobile, connected future. From Beijing to Boston, cities are deploying smart technology—sensors embedded in streets and subways, Wi-Fi broadcast airports and green spaces—to address the basic challenges faced by massive, interconnected metropolitan centers. In *Smart Cities*, Anthony M. Townsend documents this emerging futuristic landscape while considering the motivations, aspirations, and shortcomings of the key actors—entrepreneurs, mayors, philanthropists, and software developers—at work in shaping the new urban frontier.

**The Crisis of America's Cities** Randall Bartlett,1998 A thoroughly unique perspective to the study of cities, this is the only available book that discusses how space is used in America and how it changes as the logic of location evolves historically. Bartlett starts with the assumption that cities are fundamentally unnatural phenomena and unravels the interactions of technological advances that have made cities possible and the policies that have given them shape. Bartlett examines --how current policies respond to and affect the organization of space (covering housing, transportation, government, and other urban issues) --the future of American cities: how they will impact and be impacted on by changing commercial and labor markets and by the problems of poverty and cultural change --the difficulties in and possibilities for overcoming social dilemmas where the best choices for individuals may lead to outcomes that are collectively worse. Anyone concerned about the future of America's cities will find this book invaluable.

**How Cities Work** Alex Marshall,2000-12-31 “Marshall writes with wit, reason, and style . . . An excellent resource on the history and future of American cities.” —Library Journal Do cities work anymore? How did they get to be such sprawling conglomerations of lookalike subdivisions, mega freeways, and “big box” superstores surrounded by acres of parking lots? And why, most of all, don't they feel like real communities? These are the questions that Alex Marshall tackles in this hard-hitting, highly readable look at what makes cities work. Marshall argues that urban life has broken down because of our basic ignorance of the real forces that shape cities—transportation systems, industry and business, and political decision-making. He explores how these forces have built four very different urban environments: the decentralized sprawl of California’s Silicon Valley; the crowded streets of New York City’s Jackson Heights neighborhood; the controlled growth of Portland, Oregon; and the stage-set facades of Disney’s planned community, Celebration, Florida. To build better cities, Marshall asserts, we must understand and intelligently direct the forces that shape them. Without prescribing any one solution, he defines the key issues facing all concerned citizens who are trying to control urban sprawl and build real communities. His timely book is important reading for a wide public and professional audience.

*The Model Cities Program* Marshall Kaplan, Gans, and Kahn,United States. Office of Community Development,United States. Office of Community Development. Evaluation Division,United States. Department of Housing and Urban Development,1973 Describes the characteristics of a wide variety of rodents--mice, rats, squirrels, marmots, prairie dogs, lemmings, beavers, and others--and discusses their suitability as pets.
