Leo Geo and His Miraculous Journey Through the Center of the Earth Jon Chad,2012-03-13 An intrepid explorer climbs down, down, down the page as he voyages through the center of the earth in this unusually inventive comic adventure. Intrepid explorer Leo Geo is heading off on a mission into the unknown. With science as his sidekick, he intends to tunnel his way to the center of the earth. Of course, things never turn out quite the way you expect when you're burrowing your way through the earth's layers. Before long, Leo is forced to leave his tunneling machine behind, and he climbs, crawls, and falls to his destination while dodging giant centipedes, man-eating quadclops, and an evil army of subterranean malvisors bent on invading the surface. Kids will be drawn in by the unusual format of this inventive comic, following Leo as he climbs deeper and deeper into a very long and skinny book—and they may just learn a few things about geology as they go.

Getting Started with GEO, CouchDB, and Node.js Mick Thompson,2011-07-29 Today's mobile devices have GPS and standard APIs to give you access to coordinates—but what can you do with that data? With this concise book, application developers learn how to work with location data quickly and easily, using Node.js, CouchDB, and other open source tools and libraries. Node.js makes it simple to run event code on the Web, and the CouchDB document-oriented database lets you store location data and perform complex queries on it quickly. You'll learn how to get started with these tools, and then use them together to build an example project called MapChat, using HTML and JavaScript code samples. Learn how to serve dynamic content with Node.js, and use its asynchronous IO to handle several requests at once Become familiar with GeoJSON, Geohash, and the Geospatial Data Abstraction Library (GDAL) for working with spatial data Build geospatial indexes using the GeoCouch branch of CouchDB Combine these tools to build a project that lets users post real-time chat messages tagged with their current map location

La+ Geo Karen M'Closkey,2020-11 GEO--Earth--is a word that simultaneously signifies something vast and elemental. It refers to both the planet on which we live and the soil that sustains us. GEO is the physical and representational bedrock of landscape architecture--the foundation of many disciplines from which we draw our knowledge. Geography, Geology, and Geometry, in particular, are fundamental to our discipline's intellectual core. And now, we seem ever more entangled in GEO as some scholars across the sciences and humanities argue that humans should be recognized as agents of change at geologic time scales. * Guest editors Karen M'Closkey and Keith VanDerSys explore site surveying and sensing technologies as part of an expanded toolkit for landscape architects to bring environmental patterns down to earth and into view. * Designer Robert Gerard Pietrusko reveals the covert militaristic agendas of early aerial land cover interpretation.* Geographer Matthew W. Wilson revisits the rise of critical cartography within geography in the 1980s and '90s.* Media scholar Lisa Parks describes the politics of vertical mediation by recounting the importance of activists' use of drone-captured video to document both the protests against the construction of an oil pipeline through tribal lands, as well as the aggressive countermeasures taken by law enforcement to squelch the protests. * Jeffrey S. Nesbit and David Salomon, rocket launch pads provide a vehicle to unpack the relationship between terrestrial and extraterrestrial territories.* Geographers Douglas Robb and Karen Bakker caution against the voyeuristic tendencies enabled by the satellite gaze.* Through illustrated Geostories, Rania Ghosn imaginatively engages the global commons of outer space and oceans.* Designer Matthew Ransom examines the tension between grassroots organizations and fracking industries in Pennsylvania.* Author and activist Lucy R. Lippard takes us on an aerial journey across the United States.* Historian and geographer B.W. Higman traces our modern predilections towards flatness.* Through a remaking of Eugène Viollet-le-Duc's Mont Blanc studies, landscape architect Aisling O'Carroll exposes the imposition of geometric rationalization on nature. * Noah Heringman revisits the sublime in 18th-century landscape design, offering parallels to today's Anthropocene discourses about environmental depletion.* Shannon Mattern examines how rocks are collected, examined, and displayed as objects of spectacular brilliance - objects that ultimately reflect back on us by illuminating the histories of oppression embedded in their extraction.* LA+ GEO also includes interviews with the celebrated author of After the Map, William Rankin, author and citizen-sensing visionary Jennifer Gabrys, and New Zealand-based media artist and author Janine Randerson.

Introduction to Integrated Geo-information Management Seppe Cassettari,2012-12-06 This book was inspired by the revolution in geographical information systems during the late 1970s and 1980s which introduced to many the concept of computer-based information systems for spatially referenced data. The map, the aerial photograph and the satellite image were wedded to a database of textual information through the rapidly developing technology of powerful graphics workstations. This brought the skills of the geographer to a wide range of disciplines and specialists. But this book is not about the basic concepts of geographical information systems themselves. It is not about hardware or software per se, nor the integral concepts of geo-referenced data handling built into such systems; these are to be found in a growing number of introductory texts on the subject. Instead the focus of this book is on of geo-information management. the much wider issues While an understanding of the systems, their capabilities and limitations is necessary, of greater importance to the long term application of geographical understanding to problem solving is the wider context of information handling. Spatial data are becoming increasingly important in understanding the issues that confront the world. Chapter 1 is a discussion of the general issues which relate to management and information systems. It concludes with review of spatial decision support systems which are of increasing importance to the GIS community.

Geo-information Mathias Lemmens,2013-11-11 Geomatics, the handling and processing of information and data about the Earth, is one geoscience discipline that has seen major changes in the last decade, as mapping and observation systems become ever more sensitive and sophisticated. This book is a unique and in-depth survey of the field, which has a central role to play in tackling a host of environmental issues faced by society. Covering all three strands of geomatics - applications, information technology and surveying - the chapters cover the history and background of the subject, the technology employed both to collect and disseminate data, and the varied applications to which geomatics can be put, including urban planning, assessment of biodiversity, disaster management and land administration. Relevant professionals, as well as students in a variety of disciplines such as geography and surveying, will find this book required reading. This rapidly developing field uses increasingly complex and accurate systems. Today, technology enables us to capture geo-data in full 3D as well as to disseminate it via the Web at the speed of light. We are able to continuously image the world from space at resolutions of up to 50 cm. Airborne LiDAR (laser surveying) sensors can be combined with digital camera technology to produce geometrically correct images of the Earth's surface, while integrating these with large-scale topographic maps and terrestrial as well as aerial images to produce 3D cityscapes that computer users can explore from their desktops.

Geo-Information Technology in Earth Resources Monitoring and Management Varun Narayan Mishra,Praveen Kumar Rai,Prafull Sigh,2021 Earth resources are the precious assets that provide living space for human beings. In the last few decades, the pressure on earth resources has increased due to anthropogenic activities and rapid industrialization. The sustainable management of earth resources requires reliable, accurate, and timely information at different observational scales. Geo-information technology is an efficient tool for acquiring information required for environmental protection, earth resources monitoring, and addressing the issues associated with sustainable development and management. It offers an influential and capable tool for mapping, monitoring, modeling, and management of earth resources. Many researchers have reported their findings and operational applications of direct relevance to the management of earth resources with the launch of imaging satellites in the 1970s. However, few studies have been reported to understand the core science and research basics, as there are larger issues of capacity building to use geo-information technology in sustainable development and management of earth resources. There is also a fundamental gap between the theoretical concepts and the operational use of these advanced tools. This could be resolved by providing a broad range of applications of this technology to the scientific and research community in the field of geospatial technologies and allied subjects. This book, entitled Geo-Information Technology in Earth Resources Monitoring and Management, deals with the challenges for sustainable management and development of earth resources with a focus on India and other countries around the world. The chapters are written by prominent academicians, researchers, and experts in the field of geo-information technology and

related subjects. This book is a collection of chapters providing a multi-disciplinary overview for academicians, researchers, scientists, administrators, policymakers, social scientists, and professionals involved in the various aspects of earth resources development, planning, and management. The aim of this book is to replenish the gap in the available literature on the subject by bringing together the concepts, theories, and experiences of specialists and professionals in this field--

Geo-data John McCoy,2003 Contains alphabetically arranged entries that describe the physical geography of 207 countries or dependencies, each with a relief map, a collection of key facts, an overview of geography and geology, discussion of specific geographic features, a look at human population, and a list of further readings.

Introduction to Integrated Geo-Information Management Seppe Cassettari,1993-08-19

A History of Spaces John Pickles,2004 It also considers the use of maps for military purposes, maps that have coded modern conceptions of health, disease and social character, and maps of the transparent human body and the transparent earth. The final chapters of the book turn to the rapid pace of change in mapping technologies, the forms of visualization and representation that are now possible, and what the author refers to as 'the possibilities for post-representational cartographies'.--Jacket.

Global Environment Outlook - GEO-6: Healthy Planet, Healthy People UN Environment,2019-06-06 Published to coincide with the Fourth United Nations Environmental Assembly, UN Environment's sixth Global Environment Outlook calls on decision makers to take bold and urgent action to address pressing environmental issues in order to protect the planet and human health. By bringing together hundreds of scientists, peer reviewers and collaborating institutions and partners, the GEO reports build on sound scientific knowledge to provide governments, local authorities, businesses and individual citizens with the information needed to guide societies to a truly sustainable world by 2050. GEO-6 outlines the current state of the environment, illustrates possible future environmental trends and analyses the effectiveness of policies. This flagship report shows how governments can put us on the path to a truly sustainable future - emphasising that urgent and inclusive action is needed to achieve a healthy planet with healthy people. This title is also available as Open Access on Cambridge Core.

Geo-Topology Fivos Papadimitrou,2024-01-05 Geo-Topology is an exploration of the depth and breadth of the relationships between Geography and Topology, with applications ranging from Landscape Geography to Social Geography and from Spatial Analysis to Geospatial Technologies. It shows how topics of geographical research (landscapes, borders, spatial social relationships etc) can be examined by using mathematical concepts and methods of Topology, exposing the realm of geo-topological modelling and visualization through Point-Set Topology, Knot Theory, Reeb graphs, Topological Surfaces (i.e. Möbius bands and Klein bottles), Differential Topology, Network Analysis, Combinatorial Topology, Braid Theory and Ultrametric Topology. Besides geographers, this book is a trove of new ideas for landscape ecologists, mathematicians, data scientists, sociologists, psychologists, anthropologists and educators. Geo-Topology is a systematic introduction to topological thinking in Geography, also by highlighting the significance of Topology for Geographical Education, as well as for the Philosophy and Epistemology of Geography.

The Incredible Plate Tectonics Comic Kanani K. M. Lee,Adam Wallenta,2014-09-14 The Incredible Plate Tectonics Comic is a wild adventure in earth science. Follow Geo and his robot dog, Rocky, as they travel back in time to Pangea, surf a tsunami, and escape an erupting volcano—all in time for Geo’s first-period science test! The journey starts 200 million years ago and takes you to modern-day Hawai’i, the ocean floor, and deep inside the Earth. You’ll learn: -How scientists developed the theory of plate tectonics -Why the Earth shakes -What’s in the center of the Earth -How volcanoes can form islands The Incredible Plate Tectonics Comic will teach you about geology in a fun, lively, and visual way. Ages 8+. Recommended for grade 6 and up

Large-Scale Visual Geo-Localization Amir R. Zamir,Asaad Hakeem,Luc Van Gool,Mubarak Shah,Richard Szeliski,2016-07-05 This timely and authoritative volume explores the bidirectional relationship between images and locations. The text presents a comprehensive review of the state of the art in large-scale visual geo-localization, and discusses the emerging trends in this area. Valuable insights are supplied by a pre-eminent selection of experts in the field, into a varied range of real-world applications of geo-localization. Topics and features: discusses the latest methods to exploit internet-scale image databases for devising geographically rich features and geo-localizing query images at different scales; investigates geo-localization techniques that are built upon high-level and semantic cues; describes methods that perform precise localization by geometrically aligning the query image against a 3D model; reviews techniques that accomplish image understanding assisted by the geo-location, as well as several approaches for geo-localization under practical, real-world settings.

Shaking the Foundations of Geo-engineering Education Bryan McCabe,Marina Pantazidou,Declan Phillips,2012-06-12 This book comprises the proceedings of the international conference Shaking the Foundations of Geo-engineering Education (NUI Galway, Ireland, 4-6 July 2012), a major initiative of the International Society of Soil Mechanics and Geotechnical Engineering (ISSMGE) Technical Committee (TC306) on Geo-engineering Education. Geo-Spatial Technologies in Urban Environments Ryan R. Jensen,Jay D. Gatrell,Daniel McLean,2007-05-11 This book expands the current frame of reference of remote sensing and geographic information specialists to include an array of socio-economic and related planning issues. Using remotely sensed data, the project explores the efficacy and policy implications of new approaches toward analyzing data, integrates approaches from human geography and explores the utility of employing geo-technologies to further the politics of local growth and smart growth coalitions, as in green space programs.

GEO-X John F. Raffensperger,2023-06-27 This book is for executives who genuinely want to help end global warming and who believe in the power of markets. Executives understand the difficulties in ending global warming. Policymakers haven’t been able to make the necessary global deal for 50 years, because making the deal is too hard. Carbon pricing mechanisms are weak and partial. The market for carbon removal is fragmented, complex, and rife with moral hazard. Executives with sustainability objectives must use annoying internal carbon accounting or pricing as poor substitutes for economy-wide carbon pricing. Suppliers are subject to different regulations, complicating supply chain sustainability goals. Executives spend time and money to buy carbon offsets in good faith, only to discover – sometimes in the headlines – that their offsets are fraudulent. This book proposes a brave roadmap for a coalition of companies to solve these problems. The coalition can start a new institution, the Global Emissions and Offset Exchange (GEO-X). GEO-X would operate a unified two-sided market for emissions permits and carbon offsets. GEO-X would enforce those offsets with contracts and a standing cadre of scientists and lawyers. It has powerful incentives for participation. And it would use the most efficient cap-and-trade mechanism ever designed, with the ability to put a deadline on global warming. The book draws on classic economic principles, market design, game theory, and supply chain management. If you want to help end global warming and if you believe in the power of markets, get this book for your next plane flight.

Geological and Geo-Environmental Processes on Earth Arun Kumar Shandilya,Vinod Kumar Singh,Suresh Chandra Bhatt,Chandra Shekhar Dubey,2021 This edited volume dedicated to late Prof. P.S. Saklani addresses the multidisciplinary themes pertaining to role of tectonism and magmatism in Crustal Evolution and global distribution of metallic and non metallic mineral deposits. It gives valuable information on geodynamic evolution, structural, petrological, isotopic, metamorphic, geochemical and geochronological attributes of continental and oceanic crust and is challenging reassessments of the existing paradigms. It

addresses the implication of magmatism, metallogeny and application of geochronological ages (U-Pb SHRIMP age, Lu-Hf isotopic system; detrital zircons). This book also advocates the role of tectonics in contamination of ground water, and control on drainage pattern and geothermal systems. It explores the vulnerability of earth towards natural hazards viz. earthquakes, floods, cyclones, tsunamis, volcanism, cyclones and drought. This volume throws light on the applications of remote sensing, GIS (Geographical Information System) and SRTM data for evaluation of the morphometric and morphotectonic parameters and exploring the susceptibility of river basins toward erosion and flood. It will be beneficial to graduate and post-graduate students as well as professionals and researchers.

Geo-Architecture and Landscape in China’s Geographic and Historic Context Fang Wang, 2016-08-16 This book approaches the concept of geo-architecture from the perspective of functions of architectures by analyzing the cases of traditional Chinese houses and tombs as well as palaces and places of worship. Houses and tombs, the ‘Yang’ dwellings and ‘Yin’ dwellings of human beings in traditional Chinese interpretation, are the two types of architectures that reveal the wisdom with which different ethnic groups adapted to different geographic environments at different times throughout the long history. Palaces are connected with various religious architectures throughout the Chinese history. The connection between imperial power and religion, along with its geographic and cultural connotations, are implicated in the pattern and layout of religious and imperial architectures. This book is the second of a 4-volume book series. The series develops the innovative concept of “geo-architecture” by exploring the myriad influences of natural, human and historical factors upon architecture. These influences are considered in three categories, namely, interaction between architecture and nature, interaction between architecture and its human users and change in architecture over time--each category serves as a lens. Augmenting these lenses is the Time-Person-Place concept applied differently to different geographic. The analysis ultimately focuses on two aspects: geographic influence on architecture and architectural response to geography. The over 1000 pictures of case architectures enriches the study with stunning and unique visual angles. This unprecedented work will be a unique and valuable contribution to the literature. Integrating as it does the disciplines of architecture, landscape architecture, and geography, Wang Fang’s voice is original, compelling, and will be much appreciated by English-speaking readers (and inside China, too, I can only imagine.) Stephen M Ervin Assistant Dean Graduate School of Design, Harvard University July 2nd, 2013 One reason for why there would be interest is because her research would fill some significant gaps in the literature. What is novel about Dr. Wang’s series is that she further extends this intellectual project of looking at Chinese architecture through Chinese eyes, by taking it one provocative step further. Annette M. Kim Associate Professor Department of Urban Studies and Planning, M.I.T. July 1st, 2013
