Users save money, because Skype charges nothing for telephone calls between Skype users. Only calling a landline or a mobile phone and receiving incoming calls from a conventional phone or mobile phone are charged (Skype Fast Facts, 2005). This idea is supposed to revolutionize the whole phone market (Powell, 2005). VoIP is the future telecommunications media in Germany. What is Skype's future in Germany?

Skype: Bodies, Screens, Space Robyn Longhurst, 2016-09-13 Despite the popularity of Skype with video many of us are still figuring out how to 'do' it. Interviews reveal that we can now run the programme but we are less certain about how to 'perform' in front of the webcam. Seeing ourselves in the box on the side can feel strange. We are not quite sure which bits of our bodies to display on the screen, how much to move around the room, or move the device around the room. Is it acceptable to use Skype with video at a funeral, in crowded spaces or while in bed? This book addresses how people are emotionally and affectually connecting with others audio-synchronously on the screen in a variety of different spatial contexts. Topics include Skype with video being used by grandparents to connect with grandchildren, friends and family using it for special occasions, and partners

using it for romance and sex. Theories addressing bodies, gender, queerness, phenomenology and orientation inform the research. It concludes that while Skype does not offer some kind of utopian future, it does open up possibilities for existing power relations to be filtered through new lines of sight/site which are shaping what bodies can do and where.

Technologies, , language: English, abstract: In the present paper, various ways of virtual communication will be illustrated. This is supposed to figure out the most effective, efficient, useful and safe communication instant messaging tool. Further, it aims at figuring out which tool(s) will prevail in the future and therefore stand(s) the test of time. In today's world, the possibilities for communication via Internet have become very common both in private and business matters. Messages can be sent from one corner of the world to the other in the blink of an eye, be it via e-mail, as the technological advanced version of letters, instant messaging with the frequent extra opportunity of a video talk and Internet telephony (VoIP) as a much more inexpensive way of phoning via Internet. In a rapidly increasing globalized world now more than ever, time is money when it comes to entrepreneurial actions and at the same time of essence for private purposes as we have got used to rapid communication. As an inevitable consequence, people's attention span as well as patience related to communication or demanding access to information has been reducing drastically.
