Anaesthesia and the Practice of Medicine: Historical Perspectives Keith Sykes, John P Bunker, 2021-08-20 Written by two anaesthetists, one British and one American, this unique book focuses on the transatlantic story of anaesthesia. The authors have both worked at the two hospitals where the first general anaesthetics for surgery were given in 1846, Massachusetts General Hospital in Boston, Massachusetts and University College Hospital, London. Each with more than fifty years' experience of working in anaesthesia, they combine their knowledge and expertise to offer a fresh outlook on the development of anaesthesia through the ages. This highly informative and intriguing text details the origins of anaesthesia, outlines the different techniques of anaesthesia and traces its progress with illuminating and enlightening commentaries. This is a fascinating book which considers the role key figures have played in developing anaesthesia including, Queen Victoria, William Morris, La Condamine, Bjorn Ibsen and Henry Beecher. Broken down into four sections, which are divided into easy-to-read chapters and filled with top quality photographs, this book makes compelling reading. It is recommended to all those interested in the history and development of medicine through the ages, and is of particular interest to anaesthetists. More than just the science of anaesthesia, this is the story about the people and personalities who have made anaesthesia what it is today.

Anaesthesia Joseph Rupreht, M.J. van Lieburg, J.A. Lee, W. Erdmann, 2012-12-06 Thesiologist, were not included. Perhaps the next symposium will have a paper on his many contributions. Even though his dates are not quite modern (1813-1858), his accomplishments were, especially his book *On Chloroform and Other Anaesthetics* (1858), the first comprehensive textbook on anaesthesia [2]. There has been a real renaissance of interest in the history of anaesthesia. Among those responsible for this rebirth, besides Dr. Rupreht and Dr. Erdmann, are Dr. Selma Calmes and Dr. Rod Calverley, now on the Board of the new American society, the Anesthesia History Association. It held its inaugural meeting in Atlanta, Georgia, during the annual meeting of the American Society of Anesthesiologists, on 9 October 1983.

The meeting was well attended, and the evening was profitable and delightful. Mention should also be made of the accomplishments of the nurse anaesthetists [3]. They are many in number, and generally they work under the direction of a physician anaesthesiologist. Although modern anaesthesia was America's first great medical discovery, it soon traversed the globe and found worldwide acceptance. The British, for example, have made many coeval and historic contributions. Besides Dr. Duncum one thinks of Prof. T. Cecil Gray, who pioneered the British use of ether [4], and Dr. J. Alfred Lee, who was a pioneer in the use of spinal anaesthesia and is currently working on the fifth edition of a textbook on spinal analgesia [7]. Dr.

Davies, Richard Stuart Atkinson, 1996 The exciting developments since the 1840s have been professionally collated in this historical textbook. These were part of an explosion of new science and technology, altering forever the direction of progress in medicine.

Principles of anaesthesia for the undergraduate student Andr, Coetzee, 2012-06-30 The overall objective of the book is to assist students in understanding the science of anaesthesia rather than subject them to recipes, which will turn doctors into technicians.

Anaesthesia for Day Case Surgery Jan Jakobsson, 2012-05-24 The use of ambulatory or 'day case' surgery has grown tremendously in Western countries in recent years at the expense of more traditional in-hospital surgical care. In the US, up to 70-80% of all surgical procedures are currently performed on an ambulatory basis. The adaptation of day case surgery still

varies considerably between countries and even within countries in Europe. The transition from traditional in-hospital care to day case surgery or ambulatory procedure calls for vigilant planning of steps in preoperative care and a team effort to optimise all parts of patient care as well as care logistics. Drug selection, drug combination, drug administration and preparation of patients are all substantially different in the day case surgery setting than in the traditional in-hospital care setting. It is therefore crucial that anaesthetists, surgeons and other clinicians involved in administering day case surgery are aware of these differences to ensure safe and effective delivery of care. Part of the Oxford Anaesthesia Library, this practical pocketbook provides an overview of the scope of day surgical anaesthesia and features simple and ready-to-use suggestions for the selection of drugs, techniques, and protocols to follow in everyday day-case surgical clinical practice.
