Citroen DS Malcolm Bobbit,1999-06-04 Citroen stunned the automotive world when the DS series was introduced in 1955. Daringly futuristic and amazingly sophisticated mechanically, it made most cars on the road at the time obsolete. John Pressnell recounts the full story of the design, development, and production of these unique cars, and offers specifications plus a wide selection of archive and contemporary photos.

Portable Play in Everyday Life: The Nintendo DS Samuel Tobin,2013-10-16 People play mobile games everywhere and at any time. Tobin examines this media practice through the players directly using the lens of the players and practice of the Nintendo DS system. He argues for the primacy of context for understanding how digital play functions in today's society, emphasizing location, killing-time, and mobile communities.

Down Syndrome (DS) Thomas Mendez,2017 Down syndrome (DS), also known as Trisomy 21, is a chromosomal disorder in which a third copy of the 21st chromosome affects both structural and behavioral development of one in every 800 live births in the United States. DS is a very common cause of mental impairment and children with DS present with a variety of medical issues, including cardiovascular defects, endocrine problems, neurodevelopment disorders, hematological problems, gastrointestinal and sleep dysfunctions, visual and hearing impairment. This book provides new research on the perspectives, challenges and management of DS. Chapter One examines the control of force and timing during finger tapping sequences of adolescents with Down syndrome. Chapter Two reviews the management of executive function following Assisted Cycling Therapy (ACT) in adolescents with DS. Chapter Three evaluates retrospectively the data of auxological and endocrinological parameters in patients with this genetic disorder.

Citroën DS Malcolm Bobbitt,2016-07-15 An in-depth look at Citroen's idiosyncratic DS, for sixty years a design icon and one of the world's most controversial, radical, idiosyncratic and technically advanced motorcars. This popular book has now been re-issued in revised and updated paperback form.

Attracting Science and Mathematics Ph.D.s to Secondary School Education Center for Education,Office of Scientific and Engineering Personnel Advisory Committee,Committee on Attracting Science and Mathematics Ph.D.s to Secondary School Teaching,2000-08-16 The National Research Council conducted a study to identify a set of incentives that state governments and local school districts can use to attract Ph.D. scientists and mathematicians to secondary school teaching positions. This project investigated the career ambitions of Ph.D.s in the physical and life sciences through focus groups and a national survey to determine the kinds of work conditions and compensation packages that would induce them to take positions teaching physics, chemistry, biology, and various electives in public high schools or positions developing secondary school science and mathematics curricula. The study conducted interviews with Ph.D.s who are already teaching in secondary schools to ascertain information from their experiences, with local school district administrators to assess what they are realistically willing to offer Ph.D. scientists to attract them, and with higher education administrators to explore programmatic changes they would need to institute to provide Ph.D.s with skills tailored to secondary school teaching. These investigations led to this report which describes the incentives local school districts could use in establishing pilot programs in this area.

The de Sitter (dS) Group and its Representations Mohammad Enayati, Jean-Pierre Gazeau, Hamed Pejhan, Anzhong Wang, 2022-11-30 This book reviews the construction of elementary systems living in de Sitter (dS) spacetime, in both the classical and quantum senses. Field theories on dS spacetime are among the most studied mathematical models of the Universe, whether for its earlier period (inflationary phase) or for its current phase of expansion acceleration (dark energy or cosmological constant). Classical elementary systems are Hamiltonian phase spaces, which are associated with co-adjoint orbits of the relativity group. On the other hand, quantum elementary systems are associated with (projective) unitary irreducible representations of the (possibly extended) relativity group (or one of its covering). This study emphasizes the conceptual issues arising in the formulation of such systems and discusses known results in a mathematically rigorous way. Particular attention is paid to: “smooth” transition from classical to quantum theory; physical content under vanishing curvature, from the point of view of a local (“tangent”) Minkowskian observer; and thermal interpretation (on the quantum level), in the sense of the Gibbons-Hawking temperature. Such a mathematical construction is of paramount importance to the understanding of the early Universe (due to the critical role that the dS metric plays in the inflationary cosmological scenarii) as well as to the construction of possible models for late-time cosmology (since a small positive cosmological constant or dark energy seems to be required by recent data). In this sense, this book uniquely blends mathematical physics (spacetime symmetry on classical and quantum levels) and theoretical physics (quantization, quantum field theory, and cosmology). Moreover, the

level of exposition varies in different parts of the book so that both experts and beginners alike can utilize the book.

CAMDEX-DS Sarah Ball, Tony Holland, Felicia A. Huppert, Peter Treppner, Karen Dodd, 2006-07-06
CAMDEX-DS is a comprehensive assessment tool for diagnosing dementia in people with Down's syndrome (a group known to be at particular risk of dementia). Based upon *CAMDEX-R*, *CAMDEX-DS* has been modified for use with intellectual disability. In order to differentiate decline due to dementia or other mental disorders from pre-existing impairment, particular emphasis has been placed on establishing change from the individual's best level of functioning. The pack is comprised of a structured informant interview, a direct assessment of the patient/participant (*CAMCOG*), and guidance for diagnosis and post-diagnosis intervention, providing a reliable way to identify dementia (and to differentiate it from other common disorders). It may be used in community settings by mental health professionals as part of the diagnostic process, or to formalize diagnosis in the context of research. Use of the *CAMCOG* provides the means for ongoing neuropsychological evaluation and informs future support and intervention strategies.

D.S. Mirsky Gerald Stanton Smith, 2000 This is the first biography in any language of 'Comrade Prince' D. S. Mirsky (1890-1939), who uniquely participated in three distinctive episodes of modern European culture. In late imperial St Petersburg he was a poet, a student of Oriental languages and ancient history, and also a Guards officer. After fighting in World War I and the Russian Civil War, Mirsky emigrated, taught at London University, and became a literary critic and historian, writing prolifically in English, and also in Russian for the Paris-centred emigration, especially as a leading member of the Eurasian movement. His closest literary relationships were with Marina Tsvetaeva and Aleksei Remizov, and later with Maksim Gorky. In 1926-7 he published *A History of Russian*

Literature, written in English, which remains the standard introduction to the subject. While in London he lived in Bloomsbury and knew the Woolfs; he also knew T. S. Eliot, and was the first Russian critic to write about him. Mirsky became a Communist in 1931 and returned to Stalin's Moscow the following year, becoming a prominent Soviet critic, and in particular championing Boris Pasternak. In 1937 he was arrested, and died in the Gulag. This biography draws on much unpublished material, including Mirsky's NKVD files.

No Second Chance (DS Pete Gayle thrillers, Book 14) Jack Slater, 2024-03-01 A rumour on the streets. A courier caught in the act. Somewhere in or close to Exeter, someone is making guns and selling them on the black market. Someone secretive enough to cover his tracks by any means necessary and ruthless enough to kill without compunction. DS Pete Gayle and his team must work with the National Crime Agency to catch him before he can spread any more death and destruction across the streets of the UK's major cities as well as closer to home. But how can they track down a ghost who works in the shadows and leaves no witnesses when all they have to go on is a cryptic nickname?
