The Greatest Lie on Earth (Expanded Edition) Edward Hendrie,2018-09-12 This book reveals the mother of all conspiracies. It sets forth biblical proof and irrefutable evidence that will cause the scales to fall from your eyes and reveal that the world you thought existed is a myth. The most universally accepted scientific belief today is that the earth is a globe, spinning on its axis at a speed of approximately 1,000 miles per hour at the equator, while at the same time it is orbiting the sun at approximately 66,600 miles per hour. All of this is happening as the sun, in turn, is supposed to be hurtling through the Milky Way galaxy at approximately 500,000 miles per hour. The Milky Way galaxy, itself, is alleged to be racing through space at a speed ranging from 300,000 to 1,340,000 miles per hour. What most people are not told is that the purported spinning, orbiting, and speeding through space has never been proven. In fact, every scientific experiment that has ever been performed to determine the motion of the earth has proven that the earth is stationary. Yet, textbooks ignore the scientific proof that contradicts the myth of a spinning and orbiting globe. Christian schools have been hoodwinked into teaching heliocentrism, despite the clear teaching in the bible that the earth is not a sphere and does not move. This book reveals the evil forces behind the heliocentric deception, and why scientists and the Christian churches have gone along with it.

Fall of Ice from the Sky BIMAL K SRIVASTAVA,2021-06-06 Reports of the Incidents of fall of large ice blocks from the sky have been appearing in media since times. These ice chunks, also known as "Blue ice" or "Aircraft Ice" happen to be the frozen mixture of human bio-waste and liquid disinfectant, that emerge in the form of the leakage from the defective toilet lines from a commercial airliner or any other transport category aircraft carrying passengers. The book gives an account of more than 600 such cases of ice fall worldwide extracted from various languages. Many people believe that the colour of ice blocks fallen from the aircraft toilets must be Blue or Green, but as a matter of fact, it could be of any colour, blue, green, yellowish, rusty, muddy, ash, white, dirty, or colourless. These ice blocks are potential hazards that are likely to endanger the lives and properties on the ground. As, the incidents are generally viewed from the perspective of weather and therefore, no preventive measures are contemplated against them. However, a majority of

them are actually found to be aviation-related, and thus there appears to be some possibility of minimising them provided appropriate precautionary measures are taken and implemented in the matter by the airlines, regulatory authorities for aviation and other concerned. This is the first occasion that a book on the topic of ice-fall from the sky has been written by an aviation expert, who has done it after conducting high-quality research work considering various aeronautical aspects as well as the facts & figures related to aviation - Satendra Singh, Former DGCA, India

Applied Data-Centric Social Sciences Aki-Hiro Sato,2014-07-29 Applied data-centric social sciences aim to develop both methodology and practical applications of various fields of social sciences and businesses with rich data. Specifically, in the social sciences, a vast amount of data on human activities may be useful for understanding collective human nature. In this book, the author introduces several mathematical techniques for handling a huge volume of data and analysing collective human behaviour. The book is constructed from data-oriented investigation, with mathematical methods and expressions used for dealing with data for several specific problems. The fundamental philosophy underlying the book is that both mathematical and physical concepts are determined by the purposes of data analysis. This philosophy is shown throughout exemplar studies of several fields in socio-economic systems. From a data-centric point of view, the author proposes a concept that may change people's minds and cause them to start thinking from the basis of data. Several goals underlie the chapters of the book. The first is to describe mathematical and statistical methods for data analysis, and toward that end the author delineates methods with actual data in each chapter. The second is to find a cyber-physical link between data and data-generating mechanisms, as data are always provided by some kind of data-generating process in the real world. The third goal is to provide an impetus for the concepts and methodology set forth in this book to be applied to socio-economic systems.

Big Data Analytics for Time-Critical Mobility Forecasting George A. Vouros,Gennady Andrienko,Christos Doulkeridis,Nikolaos Pelekis,Alexander Artikis,Anne-Laure Jousselme,Cyril Ray,Jose Manuel Cordero,David Scarlatti,2020-06-23 This book provides detailed descriptions of big data solutions for activity detection and forecasting of very large numbers of moving entities spread across large geographical areas. It presents state-of-the-art methods for processing, managing, detecting and predicting trajectories and important events related to moving entities, together with advanced visual analytics methods, over multiple heterogeneous, voluminous, fluctuating and noisy data streams from moving entities, correlating them with data from archived data sources expressing e.g. entities' characteristics, geographical information, mobility patterns, mobility regulations and intentional data. The book is divided into six parts: Part I discusses the motivation and background of mobility forecasting supported by trajectory-oriented analytics, and includes specific problems and challenges in the aviation (air-traffic management) and the maritime domains. Part II focuses on big data quality assessment and processing, and presents novel technologies suitable for mobility analytics components. Next, Part III describes solutions toward processing and managing big spatio-temporal data, particularly enriching data streams and integrating streamed and archival data to provide coherent views of mobility, and storing of integrated mobility data in large distributed knowledge graphs for efficient query-answering. Part IV focuses on mobility

analytics methods exploiting (online) processed, synopsized and enriched data streams as well as (offline) integrated, archived mobility data, and highlights future location and trajectory prediction methods, distinguishing between short-term and more challenging long-term predictions. Part V examines how methods addressing data management, data processing and mobility analytics are integrated in big data architectures with distinctive characteristics compared to other known big data paradigmatic architectures. Lastly, Part VI covers important ethical issues that research on mobility analytics should address. Providing novel approaches and methodologies related to mobility detection and forecasting needs based on big data exploration, processing, storage, and analysis, this book will appeal to computer scientists and stakeholders in various application domains.

Flat Earth Clues Mark Sargent,2023-12-04 The Flat Earth Clues book gives you 14 compelling reasons why you should rethink the globe model that you have been taught. Before you were born, before your parents, your grandparents, before you even had a family line... there was the illusion, the trick, the lie... That you lived on a small spinning rock, flying through space. What if, after centuries of preaching the globe as a religious icon, the powers that be found out that it was actually not a sphere, but instead something much different? Would they risk unravelling 500 years of science doctrine by informing the public? Could a government still retain it's authority if there were actually proof of a higher power? It's about proving the Flat Earth, but more importantly, it's about disproving the globe, and that shouldn't be possible, but there are several big questions which science has a difficult time with. Why was there only one blue marble image used for 43 years? Where are the videos of the earth rotating from space? Astronauts can't turn around in space with the camera running? Not even by accident? Are the Van Allen radiation belts dangerous? Why does the Orion Trial by Fire video exist? Why was the space shuttle program cancelled? Why does the Mars mission keep getting postponed? Why are they closing down the ISS? Why is Psalm 19:1 on Werner Von Braun's headstone? Why is the moon generating a light that is sometimes 12 degrees colder than the moon shade? How is that possible if it's reflecting the suns rays? And if the moon is generating it's own light source, then what was that dark grey thing we landed on? We can beam back crystal clear photos of Pluto, but the Global Positioning System doesn't track planes in the Southern oceans? And why does this topic, compared to ANY other, conspiracy or not, make people excited, angry, or scared? Some of you are getting anxious just listening! Why? Because it's the greatest trick of all, and we all fell for it. You should be excited, because it's going to change the world. You should be angry, because you were fooled your entire life, and you should be a little scared, because this is uncharted territory. This is the Flat Earth theory, that the world is easy to understand, more intimate, and very deliberate. It didn't just happen, it was built, and more importantly built for you. Open your eyes and smile. You have never been alone. Published by Booglez Limited, UK - Flat Earth Clues is digestible nuggets of information broken down in a very reader-friendly way. Author Mark Sargent is located in the USA. He features in the Netflix documentary Behind The Curve (2018). Mark runs a regular radio show on Truth Frequency Radio where you can phone in and discuss the topic.
