**Encyclopedia of Geography Terms, Themes, and Concepts** Reuel R. Hanks,2011-10-17 This text provides an essential reference handbook for students of geography and related social sciences. How did the Greek geographer Eratosthenes make an accurate calculation of the earth's circumference more than 1,500 years before the first voyage of Columbus to the New World? What are the green belts of England that dominate its rural landscape? And what is regarded as the driest continent on the planet? This handbook offers a broad coverage of terminology and concepts, serving as both an encyclopedic dictionary of geography terms and an approachable overview to the human and physical aspects of world geography. Approximately 150 geographic terms and concepts are defined and discussed, providing an accessible reference for anyone who requires a deeper knowledge of the language and ideas that are important to geography as a discipline. Helpful sidebars are provided to shed light on unusual or controversial theories and concepts. All major geographic concepts and terms are addressed and comprehensively explained using examples.

**Interpreting Our World** Joseph J. Kerski,2016-10-17 This important book demonstrates why geography matters in the modern-day world through its examination of 100 moments throughout history that had a significant impact on the study of geography--literally, writing about the earth. Geography is not simply accounts of the lands of earth and their features; it's about discovering everything there is to know about our planet. This book shows why geography is of critical importance to our world's 21st-century inhabitants through an exploration of the past and present discoveries that have been made about the earth. It pinpoints 100 moments throughout history that had a significant impact on the study of geography and the understanding of our world, including widely accepted maps of the ancient world, writings and discoveries of key thinkers and philosophers, key exploration events and findings during the Age of Discovery, the foundations of important geographic organizations, and new inventions in digital mapping today. The book begins with a clear explanation of geography as a discipline, a framework, and a way of viewing the world, followed by coverage of each of the 100 discoveries and innovations that provides sufficient background and content for readers to understand each topic. The book concludes with a concise synopsis of why it all matters and a look forward to 10 possible future discoveries in the next 50 years of geography. Students will gain a clear sense of what is truly revolutionary about geography, perhaps challenging their preconceived notion of what geography actually is, and grasp how important discoveries revolutionized not only the past but the present day as well.

Encyclopedia of Geographic Information Science Karen Kemp,2007-12-26 The Encyclopedia of Geographic Information Science covers the essence of this exciting, new, and expanding field in an easily understood but richly detailed style. In addition to contributions from some of the best recognized scholars in GIScience, this volume contains contributions from experts in GIS' supporting disciplines who explore how their disciplinary perspectives are expanded within the context of GIScience--what changes when consideration of location is added, what complexities in analytical procedures are added when we consider objects in 2, 3 or even 4 dimensions, what can we gain by visualizing our analytical results on a map or 3D display?

*The Photo Ark* Joel Sartore,2017 This book of photography represents National Geographic's Photo Ark, a major cross-platform initiative and lifelong project by photographer Joel Sartore to make portraits of the world's animals -- especially those that are endangered. His message: to know these animals is to save them. Sartore intends to photograph every animal in captivity in the world. He is circling the globe, visiting zoos and wildlife rescue centers to create studio portraits of 12,000 species, with an emphasis on those facing extinction. He has photographed more than 6,000 already and now, thanks to a multi-year partnership with National Geographic, he may reach his goal. This book showcases his animal portraits: from tiny to mammoth, from the Florida grasshopper sparrow to the greater one-horned rhinoceros. Paired with the prose of veteran wildlife writer Douglas Chadwick, this book presents an argument for saving all the species of our planet.

*Encyclopedia of Animals* Jules Howard,2024-04-04 Meet the tiny-but-tough tardigrade and the awe-inspiring blue whale in this illustrated introduction to invertebrates, fish, amphibians, reptiles, birds and mammals. Learn everything about more than 275 species, specially selected by natural historian Jules Howard and brought to life by the detailed artwork of Jarom Vogel. With fact panels breaking down each animal's most unique traits, as well as its habitat, size and diet, every page in Encyclopedia of Animals is sure to introduce young readers to their new favourite critter. Beloved species like the African elephant, great white shark and western gorilla get their own dedicated feature page, while more unusual species include the hellbender, Chan's megastick and pink fairy armadillo. Discover the shrimp that punches its prey with superheated water, marvel at the frog whose beating heart can be seen through its skin, and learn about the rarest turtle on the planet. If it bites, crawls, hops, flies, swings from the treetops or dives to the bottom of the ocean, there's a good chance you'll find it in this encyclopedia! And be sure to check out Encyclopedia of Insects, a go-to guide crawling with incredible facts about this huge and diverse class of animal.
