**Colloquies** Desiderius Erasmus,1997-01-01 Erasmus' Familiar Colloquies grew from a small collection of phrases, sentences, and snatches of dialogue written in Paris about 1497 to help his private pupils improve their command of Latin. Twenty years later the material was published by Johann Froben (Basel 1518). It was an immediate success and was reprinted thirty times in the next four years. For the edition of March 1522 Erasmus began to add fully developed dialogues, and a book designed to improve boys' use of Latin (and their deportment) soon became a work of literature for adults, although it retained traces of its original purposes. The final Froben edition (March, 1533) had about sixty parts, most of them dialogues. It was in the last form that the Colloquies were read and enjoyed for four centuries. For modern readers it is one of the best introductions to European society of the Renaissance and Reformation periods, with lively descriptions of daily life and provocative discussions of political, religious, social, and literary topics, presented with Erasmus's characteristic wit and verve. Each colloquy has its own introduction and full explanatory, historical, and biographical notes. Volumes 39 and 40 of

**Law and Ethics in Greek and Roman Declamation** Eugenio Amato, Francesco Citti, Bart Huelsenbeck, 2015-03-10 Ancient declamation—the practice of delivering speeches on the basis of fictitious scenarios—defies easy categorization. It stands at the crossroads of several modern disciplines. It is only within the past few decades that the full complexity of declamation, and the promise inherent in its study, have come to be recognized. This volume, which contains thirteen essays from an international team of scholars, engages with the multidisciplinary nature of declamation, focusing in particular on the various interactions in declamation between rhetoric, literature, law, and ethics. Contributions pursue a range of topics, but also complement each other. Separate essays by Brescia, Lentano, and Lupi explore social roles—their tensions and expectations—as defined through declamation. With similar emphasis on historical circumstances, Quiroga Puertas and Tomassi consider the adaptation of rhetorical material to frame contemporary realities. Schwartz draws attention to the sometimes hazy borderline between declamation and the courtroom. The relationship between laws and declamation, a topic of abiding importance, is examined in studies by Berti, Breij, and Johansson. Also with an eye to the complex interaction between laws and declamation, Pasetti offers a narratological analysis of cases of poisoning. Citti discovers the concept of natural law represented in declamatory material. While looking at a case of extreme cruelty, Huelsenbeck evaluates the nature of declamatory language, emphasizing its use as an integral instrument of performance events. Zinsmaier looks at discourse on the topic of torture in rhetorical and legal contexts.

**Multiobjective Heuristic Search** Pallab Dasgupta, P. P. Chakrabarti, S. C. DeSarkar, 1999-06-29 Solutions to most real-world optimization problems involve a trade-off between multiple conflicting and non-commensurate objectives. Some of the most challenging ones are area-delay trade-off in VLSI synthesis and design space exploration, time-space trade-off in computation, and multi-strategy games. Conventional search techniques are not equipped to

handle the partial order state spaces of multiobjective problems since they inherently assume a single scalar objective function. Multiobjective heuristic search techniques have been developed to specifically address multicriteria combinatorial optimization problems. This text describes the multiobjective search model and develops the theoretical foundations of the subject, including complexity results. The fundamental algorithms for three major problem formulation schemes, namely state-space formulations, problem-reduction formulations, and game-tree formulations are developed with the support of illustrative examples. Applications of multiobjective search techniques to synthesis problems in VLSI, and operations research are considered. This text provides a complete picture on contemporary research on multiobjective search, most of which is the contribution of the authors.

*Microbial Ecology of Arid Terrestrial Systems* Thulani P. Makhalanyane, Don Cowan, Jean-Baptiste Ramond, 2016-09-14

Water is usually referred to as the 'Molecule of Life'. It constitutes the most abundant molecule in living (micro)organisms and is also essential for critical biochemical reactions, both for the global functioning and maintenance of Ecosystems (e.g., Photosynthesis) and individual (microbial) cells (e.g., ATP hydrolysis). However, most of Earth's terrestrial environments present deficiencies in bioavailable water. Arid environments cover around a third of the land's surface, are found on the six continents and, with the anthropogenic desertification phenomenon, will increase. Commonly defined by having a ratio of precipitation to potential evapotranspiration (P/PET) below 1, arid environments, being either hot or cold, are characterized by scant and erratic plant growth and low densities in macro-fauna. Consequently, these ecosystems are microbially mediated with microbial communities particularly driving the essential N and C biogeochemical cycles. Due to the relatively simple trophic structure of these biomes, arid terrestrial environments have subsequently been used as ideal ecosystems to capture and model interactions in edaphic microbial communities. To date, we have been able to demonstrate that edaphic microorganisms (i.e., Fungi, Bacteria, Archaea, and Viruses) in arid environments are abundant, highly diverse, different from those of other terrestrial systems (both in terms of diversity and function), and are important for the stability and productivity of these ecosystems. Moreover, arid terrestrial systems are generally considered Mars-like environments. Thus, they have been the favored destination for astro(micro)biologists aiming to better understand life's potential distribution and adaptation strategies in the Universe and develop terraforming approaches. Altogether, these points demonstrate the importance of significantly improving our knowledge in the microbial community composition (particularly for Fungi, Archaea and Viruses), assembly processes and functional potentials of arid terrestrial systems, as well as their adaptation mechanisms to aridity (and generally to various other environmental stresses). This Research Topic was proposed to provide further insights on the microbial ecology of hot and cold arid edaphic systems. We provide a detailed review and nine research articles, spanning hot and cold deserts, edaphic, rhizospheric, BSC and endolithic environments as well as culture-dependent and -independent approaches.
