Weather Jenny Offill, 2021-01-19 NEW YORK TIMES BESTSELLER • From the beloved author of the nationwide best seller *Dept. of Speculation* comes a “darkly funny and urgent” (NPR) tour de force about a family, and a nation, in crisis. Lizzie works in the library of a university where she was once a promising graduate student. Her side hustle is answering the letters that come in to *Hell and High Water*, the doom-laden podcast hosted by her former mentor. At first it suits her, this chance to practice her other calling as an unofficial shrink—she has always played this role to her divorced mother and brother recovering from addiction—but soon Lizzie finds herself struggling to strike the obligatory note of hope in her responses. The reassuring rhythms of her life as a wife and mother begin to falter as her obsession with disaster psychology and people preparing for the end of the world grows. A marvelous feat of compression, a mix of great feeling and wry humor, *Weather* is an electrifying encounter with one of the most gifted writers at work today.

Wisconsin's Weather and Climate Joseph M. Moran, Edward J. Hopkins, 2002 The land that is now called Wisconsin has a place in weather history. Its climate has ranged from tropical to polar over hundreds of millions of years--and even today, that's the seeming difference between July and January here. And Wisconsinites have played key roles in advancing the science of meteorology and climatology: Increase Lapham helped found the National Weather Service in the nineteenth century; Eric Miller was the first to broadcast regular weather reports on the radio in the 1920s; Verner Suomi pioneered tracking weather by satellite; and Reid Bryson has been a leader in studying global climate change. Wisconsin's Weather and Climate is written for weather buffs, teachers, students, outdoor enthusiasts, and those working in fields, lakes, and forests for whom the weather is a daily force to be reckoned with. It examines the physical features of Wisconsin that shape the state's climate--topography, mid-latitude location, and proximity to Lakes Superior and Michigan--and meteorological phenomena that affect climate, such as atmospheric circulation and air mass frequency. Authors Joseph M. Moran and Edward J. Hopkins trace the evolution of methods of weather observation and forecasting that are so important for agriculture and Great Lakes commerce, and they explain how Wisconsin scientists use weather balloons, radar, and satellites to improve forecasting and track climate changes. They take readers through the seasonal changes in weather in Wisconsin and give an overview of what past climate changes might tell us about the future. Appendices provide

climatic data for Wisconsin, including extremes of temperature, snowfall, and precipitation at selected stations in the state. The authors also list sources for further information. Vignettes throughout the book provide fascinating weather lore: o Why there are cacti in Wisconsin o The famous Green Bay Packers-Dallas Cowboys Ice Bowl game of 1967 o The Army Signal Corps' ban on the word tornado o Advances in snow-making technology o The decline of the Great Lakes ice industry

Weather Services for the Nation National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on the Assessment of the National Weather Service's Modernization Program, 2012-11-02 During the 1980s and 1990s, the National Weather Service (NWS) undertook a major program called the Modernization and Associated Restructuring (MAR). The MAR was officially completed in 2000. No comprehensive assessment of the execution of the MAR plan, or comparison of the promised benefits of the MAR to its actual impact, had ever been conducted. Therefore, Congress asked the National Academy of Sciences to conduct an end-to-end assessment. That report, *The National Weather Service Modernization and Associated Restructuring: A Retrospective Assessment*, concluded that the MAR was a success. Now, twelve years after the official completion of the MAR, the challenges faced by the NWS are no less important than those of the pre-MAR era. The three key challenges are: 1) Keeping Pace with accelerating scientific and technological advancement, 2) Meeting Expanding and Evolving User Needs in an increasingly information centric society, and 3) Partnering with an Increasingly Capable Enterprise that has grown considerably since the time of the MAR. *Weather Services for the Nation* presents three main recommendations for responding to these challenges. These recommendations will help the NWS address these challenges, making it more agile and effective. This will put it on a path to becoming second to none at integrating advances in science and technology into its operations and at meeting user needs, leading in some areas and keeping pace in others. It will have the highest quality core capabilities among national weather services. It will have a more agile

organizational structure and workforce that allow it to directly or indirectly reach more end-users, save more lives, and help more businesses. And it will have leveraged these capabilities through the broader enterprise. This approach will make possible societal benefits beyond what the NWS budget alone allows.
