Emerging Technologies to Benefit Farmers in Sub-Saharan Africa and South Asia National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on a Study of Technologies to Benefit Farmers in Africa and South Asia, 2009-02-21 Increased agricultural productivity is a major stepping stone on the path out of poverty in sub-Saharan Africa and South Asia, but farmers there face tremendous challenges improving production. Poor soil, inefficient water use, and a lack of access to plant breeding resources, nutritious animal feed, high quality seed, and fuel and electricity—combined with some of the most extreme environmental conditions on Earth—have made yields in crop and animal production far lower in these regions than world averages. Emerging Technologies to Benefit Farmers in Sub-Saharan Africa and South Asia identifies sixty emerging technologies with the potential to significantly improve agricultural productivity in sub-Saharan Africa and South Asia. Eighteen technologies are recommended for immediate development or further exploration. Scientists from all backgrounds have an opportunity to become involved in bringing these and other technologies to fruition. The opportunities suggested in this book offer new approaches that can synergize with each other and with many other activities to transform agriculture in sub-Saharan Africa and South Asia.

Flamin' Hot Richard Montanez, 2021-06-15 Soon to be a Hulu feature film directed by Eva Longoria – scheduled release for Summer 2023 Read the story everyone is talking about: how a janitor struggling to put food on the table invented Flamin' Hot Cheetos in a secret test kitchen, breaking barriers and becoming the first Latino frontline worker promoted to executive at Frito-Lay. Richard Montañez is a man who made a science out of walking through closed doors, and his success story is an empowerment manual for anyone stuck in a dead-end job or facing a system stacked against them. Having taken a job mopping floors at Frito-Lay's California factory to support his family, Montañez took his future into his own hands and created the world's hottest snack food: Flamin' Hot Cheetos. This bold move not only disrupted the food industry with some much-needed spice, but also shook up a corporate culture in which everyone stayed in their lane. When a top food scientist at Frito-Lay sent out a memo telling sales and marketing to kill the new product before it made it to the store shelves—jealous that someone with no formal education beyond the sixth grade could do his job—Montañez was forced to go rogue once again to save his idea. Through creative thinking, community building, and a few powerful mindset shifts, he outsmarted the naysayers who tried to get in his way. Flamin' Hot proves that you can break out of your career rut and that your present circumstances don't have to dictate your future.

Dictionary of Abbreviations in Medical Sciences Rolf Heister, 2012-12-06 Not everyone is a friend of the manifold abbreviations that have by now become a part of the scientific language of medicine. In order to avoid misunderstanding these abbreviations, it is wise to refer to a reliable dictionary, such as this one prepared by Heister. The abbreviation ED means, for instance, effective dose to the pharmacologist. However, it might also stand for emetic dose. Radiologists use the same abbreviation for erythema dose, and ED could also mean ethyl dichlorarsine. A common meaning of ECU is European currency unit, a meaning that might not be very often in scientific medical publications. ECU, however, also means environmental control unit or European Chiropractic Union. Hopefully, those making inventions and discoveries will make use of Heister's dictionary before creating new abbreviations when preparing manuscripts for scientific publications. It is a very worthwhile goal not to use the same abbreviation for several different terms, especially if it is already widely accepted to mean only one of them. It may be impossible, however, to achieve this goal in different scientific disciplines. Therefore, although it is wise for the abbreviations used in a publication to be defined, it is also very helpful for readers and writers to use a dictionary such as this one. The author deserves our warmest thanks since we know that compiling such a comprehensive dictionary is based upon incredibly hard effort.

Dignity in the Workplace Matthijs Bal, 2017-08-01 Introducing a theory of workplace dignity into the field of management studies, this innovative new book presents an alternative paradigm based on principles of human dignity which is integrated into a theoretical approach to the topic. The author addresses and analyses the causes and consequences of the dominant political-economic paradigm within management studies. Further, it presents a theoretical alternative which can constitute a foundation for a new way of thinking about organisations, management, and leadership. Dignity in the Workplace offers scholars ideas for how research in the field of management studies may be enriched by a dignity-paradigm, and goes further to explore the role of a dignity-paradigm in the function of HR-managers and organisational leaders. Thus, the book aims to contribute to the need for alternative conceptualisations of how contemporary organisations can be managed.

Incerto 4-Book Bundle Nassim Nicholas Taleb, 2016-01-26 Nassim Nicholas Taleb's landmark Incerto series is an investigation of luck, uncertainty, probability, opacity, human error, risk, disorder, and decision-making in a world we don't understand, in nonoverlapping and standalone books. All four volumes—Antifragile, The Black Swan, Fooled by Randomness, and the expanded edition of The Bed of Procrustes, updated with more than 50 percent new material—are now together in one ebook bundle. ANTIFRAGILE "Startling . . . richly crammed with insights, stories, fine phrases and intriguing asides."—The Wall Street Journal Just as human bones get stronger when subjected to stress and tension, many things in life benefit from disorder, volatility, and turmoil. What Taleb has identified and calls "antifragile" is that category of things that not only gain from chaos but need it in order to survive and flourish. The resilient resists shocks and stays the same; the antifragile gets better and better. What is crucial is that the antifragile loves errors, as it incurs small harm and large benefits from them. Spanning politics, urban planning, war, personal finance, economic systems, and medicine in an interdisciplinary and erudite style, Antifragile is a blueprint for living in a Black Swan world. THE BLACK SWAN "[A book] that altered modern thinking."—The Times (London) A black swan is a highly improbable event with three principal characteristics: It is unpredictable; it carries a massive impact; and, after the fact, we concoct an explanation that makes it appear less random and more predictable. The astonishing success of Google was a black swan; so was 9/11. In this groundbreaking and prophetic book, Taleb shows that black swan events underlie almost everything about our world, from the rise of religions to events in our own personal lives, and yet we—especially the experts—are blind to them. FOOLED BY RANDOMNESS "[Fooled by Randomness] is to conventional Wall Street wisdom approximately what Martin Luther's ninety-five theses were to the Catholic Church."—Malcolm Gladwell, The New Yorker Are we capable of distinguishing the fortunate charlatan from the genuine visionary? Must we always try to uncover nonexistent messages in random events? Fooled by Randomness is about luck: more precisely, about how we perceive luck in our personal and professional experiences. Set against the backdrop of the most conspicuous forum in which luck is mistaken for skill—the markets—Fooled by Randomness is an irreverent, eye-opening, and endlessly entertaining exploration of one of the least understood forces in our lives. THE BED OF PROCRUSTES "Taleb's crystalline nuggets of thought stand alone like esoteric poems."—Financial Times This collection of aphorisms and meditations expresses Taleb's major ideas in ways you least expect. The Bed of Procrustes takes its title from Greek mythology: the story of a man who made his visitors fit his bed to perfection by either stretching them or cutting their limbs. With a rare combination of pointed wit and potent wisdom, Taleb plows through human illusions, contrasting the classical views of courage, elegance, and erudition against the modern diseases of nerdiness, philistinism, and phoniness.

Noble Metal Nanoparticles Ignác Capek, 2017-07-20 This book introduces the reader the chemistry of reaction approaches by which noble metal nanoparticles are synthesized, including synthetic approaches using the Brust-Schiffrin method, a high-temperature solution-phase synthesis, polymer and biological entities, weak and strong reducing and capping agents, the low and high temperatures, various additives and various novel approaches such as plasma, ionic liquids, UV light and gamma rays and others. This book starts with a brief overview of foundation work concerned with the chapter topics such as nanomaterials, nanoscience, surface-capping molecules, traditional and nontraditional reduction agents. In addition, chemical and physical properties of noble metal nanoparticles with different structures and elements such as monolayered clusters, nanorods, and bimetallic nanoparticles are described comprehensively. The aim is to summarize the fundamentals and mechanistic approaches in the preparation and characterization of metal colloidal nanoparticles and dispersions. In this way the reader is provided with a systematic and coherent picture of the interesting field of nanoscience based on noble metal colloidal nanoparticles. Intended as a wide-ranging overview, the book is a resource for novices in the field as well as for specialists, particularly those scientists working in the area of nanoparticle synthesis. Nanoscience and nanotechnology are discussed from the chemist's point of view. Therefore, this volume describes in detail the terms, definitions, theories, experiments, and techniques dealing with the synthesis of noble metal nanoparticles. The material presented here is essential reading for research chemists, technologists, and engineers in the fields of specialty nanomaterials and metal industries, and also is highly valuable for researchers in university, institutional, and governmental laboratories, especially for those at advanced stages of their careers.

Dynamics of the Pantanal Wetland in South America Ivan Bergier,Mario Luis Assine,2015-11-30 This book provides readers with in-depth insights into the changes in the Pantanal wetland from its formation to the actual and likely future states. It reveals that today’s Pantanal is an evolutionary consequence of geological, ecological and, more recently, man-made events taking place at distinct space-time intervals. Topics include geotectonics and sun-earth interactions, which largely dictate the rate of drastic changes that eventually disrupt ecological stability and radically rebuild the regional landscape. Furthermore, the biota-climate system is discussed as a major driver reshaping the ecohydrology functioning of the landscape on an intermediate timescale. Also covered are major changes in the landscape ecohydrology and biodiversity due to recent land-use and climate changes induced by humankind in the Anthropocene. The ability to recognize how those temporal scales impact the Pantanal wetland provides the opportunity for wise management approaches and the sustainable development of the region.
