Genetic Glass Ceilings Jonathan Gressel,2020-03-03 As the world's population rises to an expected ten billion in the next few generations, the challenges of feeding humanity and maintaining an ecological balance will dramatically increase. Today we rely on just four crops for 80 percent of all consumed calories: wheat, rice, corn, and soybeans. Indeed, reliance on these four crops may also mean we are one global plant disease outbreak away from major famine. In this revolutionary and controversial book, Jonathan Gressel argues that alternative plant crops lack the genetic diversity necessary for wider domestication and that even the Big Four have reached a "genetic glass ceiling": no matter how much they are bred, there is simply not enough genetic diversity available to significantly improve their agricultural value. Gressel points the way through the glass ceiling by advocating transgenics—a technique where genes from one species are transferred to another. He maintains that with simple safeguards the technique is a safe solution to the genetic glass ceiling conundrum. Analyzing alternative crops—including palm oil, papaya, buckwheat, tef, and sorghum—Gressel demonstrates how gene manipulation could enhance their potential for widespread domestication and reduce our dependency on the Big Four. He also describes a number of ecological benefits that could be derived with the aid of transgenics. A compelling synthesis of ideas from agronomy, medicine, breeding, physiology, population genetics, molecular biology, and biotechnology, *Genetic Glass Ceilings* presents transgenics as an inevitable and desperately necessary approach to securing and diversifying the world's food supply.

Dressing for Altitude Dennis R. Jenkins,2012-08-27 Since its earliest days, flight has been about pushing the limits of technology and, in many cases, pushing the limits of human endurance. The human body can be the limiting factor in the design of aircraft and spacecraft. Humans cannot survive unaided at high altitudes. There have been a number of books written on the subject of spacesuits, but the literature on the high-altitude pressure suits is lacking. This volume provides a high-level summary of the technological development and operational use of partial- and full-pressure suits, from the earliest models to the current high altitude, full-pressure suits used for modern aviation, as well as those that were used for launch and entry on the Space Shuttle. The goal of this work is to provide a resource on the technology for suits designed to keep humans alive at the edge of space.-- NTRS Web site.

Anything of Which a Woman Is Capable Mary M. McGlone,2017-12-15 The title, Anything of Which a Woman is Capable, comes from Father Jean Pierre Médaille, the Jesuit who brought together the first Sisters of St. Joseph in the mid-seventeenth century. Since 1650, congregations of St. Joseph have grown in Europe, the Americas, India and the Orient, all attracting women who are called to do anything of which they are capable to serve their dear neighbor. This volume tells stories of the foundations of congregations in France and then, beginning in 1836, in the United States. It introduces the reader to intrepid women whose willingness to serve knew no boundaries and whose strong personalities provided an ample match for Church leaders who either encouraged or tried to control their zeal. The copious footnotes make this a valuable addition to the history of Catholic women religious in the United States as well as to the history of Catholicism.

Conserving Bogs Rob E. Stoneman,Stuart Brooks,1997 Bogs are fascinating landscapes for ecologists, climatologists, archaeologists, environmental historians and water managers. But many bogs have been damaged, and legislative protection - as 29 case studies demonstrate - is not enough to conserve the rest.
