*Characterization and Properties of Petroleum Fractions* M. R. Riazi, 2005 The last three chapters of this book deal with application of methods presented in previous chapters to estimate various thermodynamic, physical, and transport properties of petroleum fractions. In this chapter, various methods for prediction of physical and thermodynamic properties of pure hydrocarbons and their mixtures, petroleum fractions, crude oils, natural gases, and reservoir fluids are presented. As it was discussed in Chapters 5 and 6, properties of gases may be estimated more accurately than properties of liquids. Theoretical methods of Chapters 5 and 6 for estimation of thermophysical properties generally can be applied to both liquids and gases; however, more accurate properties can be predicted through empirical correlations particularly developed for liquids. When these correlations are developed with some theoretical basis, they are more accurate and have wider range of applications. In this chapter some of these semitheoretical correlations are presented. Methods presented in Chapters 5 and 6 can be used to estimate properties such as density, enthalpy, heat capacity, heat of

vaporization, and vapor pressure. Characterization methods of Chapters 2-4 are used to determine the input parameters needed for various predictive methods. One important part of this chapter is prediction of vapor pressure that is needed for vapor-liquid equilibrium calculations of Chapter 9.

**Butterflies on a Sea Wind** Anne Rudloe, 2012-11-06 This memoir by a marine biologist "sings the life of a beginning Zen practitioner. . . . [with] a haunting, beautiful appreciation of the natural world." (Publishers Weekly) Anne Rudloe was attracted to Zen as a college student. But it seemed premature for a twenty-one-year-old to focus on the difficulties of life when she'd hardly begun to live. Twenty-five years later, she was ready to explore the spiritual discipline that originated in Asian monasteries more than a millennium ago. Rudloe's quest is compellingly chronicled in *Butterflies on a Sea Wind*, which combines the rigor of formal monastic Zen practice with the challenges of integrating Zen concepts into modern daily life. Her narrative describes both the physical and mental demands of Zen retreats and how she applied what she learned there to her work as a marine biologist in Florida, as well as to the rigors of raising children and caring for an elderly grandmother. In words that intimately draw in her readers, she describes how Zen helps us look inward and use the wisdom we find there to reach out to others. During the 1990s, the number of organized Buddhist centers in this country grew more than 40 percent, from 429 to 1,062. While there are many books about Zen on the market today, few give a clear picture of what it's

like to actually sit down and begin a meditation practice and then apply it to a daily life. Likewise, few books discuss the types of issues most people face every day: raising a family and earning a living. *Butterflies on a Sea Wind* does all this and more.

Gatsby Bob Batchelor, 2013-11-07 In 1925, F. Scott Fitzgerald produced his third novel, a slim work for which he had high expectations. Despite such hopes, the novel received mixed reviews and lackluster sales. Over the decades, however, the reputation of *The Great Gatsby* has grown and millions of copies have been sold. One of the bestselling novels of all time, it is also considered one of the most significant achievements in twentieth-century

fiction. But what makes *Gatsby* great? Why do we still care about this book more than eighty-five years after it was published? And how does *Gatsby* help us make sense of our own lives and times? In *Gatsby: The Cultural History of the Great American Novel*, Bob Batchelor explores the birth, life, and enduring influence of *The Great Gatsby*—from the book’s publication in 1925 through today’s headlines filled with celebrity intrigue, corporate greed, and a roller-coaster economy. A cultural historian, Batchelor explains why and how the novel has become part of the fiber of the American ethos and an important tool in helping readers to better comprehend their lives and the broader world around them. A “biography” of F. Scott Fitzgerald’s masterpiece, this book examines *The Great Gatsby*’s evolution from a nearly-forgotten 1920s time capsule to a revered cultural touchstone. Batchelor explores how this embodiment of the American Dream has become an iconic part of our national folklore, how the central themes and ideas emerging from the book—from the fulfillment of the American Dream to the role of wealth in society—resonate with contemporary readers who struggle with similar uncertainties today. By exploring the timeless elements of reinvention, romanticism, and relentless pursuit of the unattainable, Batchelor confirms the novel’s status as “The Great American Novel” and, more importantly, explains to students, scholars, and fans alike what makes *Gatsby* so great.

**The Bioregional Imagination** Tom Lynch, Cheryll Glotfelty, Karla Armbruster, 2012 Bioregionalism is an innovative way of thinking about place and planet from an ecological perspective. Although bioregional ideas occur regularly in ecocritical writing, until now no systematic effort has been made to outline the principles of bioregional literary criticism and to use it as a way to read, write, understand, and teach literature. The twenty-four original essays here are written by an outstanding selection of international scholars. The range of bioregions covered is global and includes such diverse places as British Columbia's Meldrum Creek and Italy's Po River Valley, the Arctic and the Outback. There are even forays into cyberspace and outer space. In their comprehensive introduction, the editors map the terrain of the bioregional movement, including its history and potential to inspire and invigorate place-based and environmental literary criticism. Responding to

bioregional tenets, this volume is divided into four sections. The essays in the “Reinhabiting” section narrate experiments in living-in-place and restoring damaged environments. The “Rereading” essays practice bioregional literary criticism, both by examining texts with strong ties to bioregional paradigms and by opening other, less-obvious texts to bioregional analysis. In “Reimagining,” the essays push bioregionalism to evolve—by expanding its corpus of texts, coupling its perspectives with other approaches, or challenging its core constructs. Essays in the “Renewal” section address bioregional pedagogy, beginning with local habitat studies and concluding with musings about the Internet. In response to the environmental crisis, we must reimagine our relationship to the places we inhabit. This volume shows how literature and literary studies are fundamental tools to such a reimagining.

*Analysis and Simulation of Electrical and Computer Systems* Damian Mazur, Marek Gołębiowski, Mariusz Korkosz, 2018-08-31 This book addresses selected topics in electrical engineering, electronics and mechatronics that have posed serious challenges for both the scientific and engineering communities in recent years. The topics covered range from mathematical models of electrical and electronic components and systems, to simulation tools implemented for their analysis and further developments; and from multidisciplinary optimization, signal processing methods and numerical results, to control and diagnostic techniques. By bridging theory and

practice in the modeling, design and optimization of electrical, electromechanical and electronic systems, and by adopting a multidisciplinary perspective, the book provides researchers and practitioners with timely and extensive information on the state of the art in the field – and a source of new, exciting ideas for further developments and collaborations. The book presents selected results of the XIII Scientific Conference on Selected Issues of Electrical Engineering and Electronics (WZEE 2016), held on May 04–08, 2016, in Rzeszów, Poland. The Conference was organized by the Rzeszów Division of Polish Association of Theoretical and Applied Electrical Engineering (PTETiS) in cooperation with the Faculty of Electrical and Computer Engineering of the Rzeszów University of Technology.
