Microaggression Theory Gina C. Torino, David P. Rivera, Christina M. Capodilupo, Kevin L. Nadal, Derald Wing Sue, 2018-10-02 Get to know the sociopolitical context behind

microaggressions Microaggressions are brief, everyday exchanges that send denigrating messages to certain individuals because of their group membership (e.g., race, gender, culture, religion, social class, sexual orientation, etc.). These daily, common manifestations of aggression leave many people feeling vulnerable, targeted, angry, and afraid. How has this become such a pervasive part of our social and political rhetoric, and what is the psychology behind it? In *Microaggression Theory*, the original research team that created the microaggressions taxonomy, Gina Torino, David Rivera, Christina Capodilupo, Kevin Nadal, and Derald Wing Sue, address these issues head-on in a fascinating work that explores the newest findings of microaggressions in their sociopolitical context. It delves into how the often invisible nature of this phenomenon prevents perpetrators from realizing and confronting their own complicity in creating psychological dilemmas for marginalized groups, and discusses how prejudice, privilege, safe spaces, and cultural appropriation have become themes in our contentious social and political discourse. Details the psychological effects of microaggressions in separate chapters covering clinical impact, trauma, related stress syndromes, and the effect on perpetrators Examines how microaggressions affect education, employment, health care, and the media Explores how social policies and practices can minimize the occurrence and impact of microaggressions in a range of environments Investigates how microaggressions relate to larger social movements If you come across the topic of microaggressions in your day-to-day life, you can keep the conversation going in a productive manner—with research to back it up!

Developing Feedback for Pupil Learning Ruth

Dann, 2017-08-21 Feedback is often considered to be one of the pivotal enablers of formative assessment. This key topic has received considerable attention within research literature and has been studied by a number of leading experts in the field. This

book is positioned at the heart of these debates and offers a specific contribution to ‘exploring’ and ‘exploiting’ the learning gap which feedback seeks to shift. *Developing Feedback for Pupil Learning* seeks to synthesise what we know about feedback and learning into more in-depth understandings of what influences both the structure of and changes to the learning gap. This research-informed but accessibly written enquiry is at the very heart of teaching, learning and assessment. It offers a timely contribution to understanding what works (and what doesn’t) for whom and why. Split into three main parts, it covers: Feedback for learning in theory, policy and practice; Conceptualising the ‘learning gap’; New futures for feedback. This text will be essential reading for students, teachers, researchers and all those who engage with issues related to teaching, learning and assessment academically.

Barash, *The Wall Street Journal* It has my vote for science book of the year.” —Parul Sehgal, *The New York Times* Immensely readable, often hilarious...Hands-down one of the best books I’ve read in years. I loved it. —Dina Temple-Raston, *The Washington Post* From the bestselling author of *A Primate’s Memoir* and the forthcoming *Determined: A Science of Life Without Free Will* comes a landmark, genre-defining examination of human behavior and an answer to the question: Why do we do the things we do? *Behave* is one of the most dazzling tours d’horizon of the science of human behavior ever attempted. Moving across a range of disciplines, Sapolsky—a neuroscientist and primatologist—uncovers the hidden story of our actions. Undertaking some of our thorniest questions relating to tribalism and xenophobia, hierarchy and competition, and war and peace, *Behave* is a towering achievement—a majestic

synthesis of cutting-edge research and a heroic exploration of why we ultimately do the things we do . . . for good and for ill.

Deep Learning Ian Goodfellow, Yoshua Bengio, Aaron Courville, 2016-11-10 An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. "Written by three experts in the field, Deep Learning is the only comprehensive book on the subject." —Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning.

The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. A website offers supplementary material for both readers and instructors.

Conditioned Emotional Reactions John B. Watson, Rosalie Rayner, 2013-01-10 Psychology Classics: The Case of Little Albert Conditioned Emotional Reactions by John B. Watson and Rosalie Rayner is one of the most influential, infamous and iconic research articles ever published in the history of psychology. Commonly referred to as The Case of Little Albert this psychology classic attempted to show how fear could be induced in an infant through classical conditioning. Originally published in 1920, Conditioned Emotional Reactions remains among the most frequently cited journal articles in introductory psychology courses and textbooks. A psychology classic is by definition a must read. However, most seminal texts within the discipline remain unread by a majority of psychology students. A detailed, well written description of a classic study is fine to a point, but there is absolutely no substitute for understanding and engaging with the issues under review than by reading the authors unabridged ideas, thoughts and findings in their entirety. Bonus Material: One of the most dramatic aspects of Watson and Rayner's original study was that they had planned to test a number of methods by which they could remove Little Albert's conditioned fear responses. However, as Watson noted Unfortunately Albert was taken from the hospital the day the

above tests were made. Hence the opportunity of building up an experimental technique by means of which we could remove the conditioned emotional responses was denied us. This unforeseen turn of events was something that obviously stayed with Watson, as under his guidance some three years later, Mary Cover Jones conducted a follow-up study - A Laboratory Study of Fear: The Case of Peter - which illustrated how fear may be removed under laboratory conditions. This additional and highly relevant article is also presented in full. The Case of Little Albert has been produced as part of an initiative by the website All About Psychology to make important psychology publications widely available. www.all-about-psychology.com
