Modelling, Simulation and Applications of Complex Systems Mohd Hafiz Mohd, Md Yushalify Misro, Syakila Ahmad, Doanh Nguyen Ngoc, 2021-06-10 This book discusses the latest progresses and developments on complex systems research and intends to give an exposure to prospective readers about the theoretical and practical aspects of mathematical modelling, numerical simulation and agent-based modelling frameworks. The main purpose of this book is to emphasize a unified approach to complex systems analysis, which goes beyond to examine complicated phenomena of numerous real-life systems; this is done by investigating a huge number of components that interact with each other at different (microscopic and macroscopic) scales; new insights and emergent collective behaviours

can evolve from the interactions between individual components and also with their environments. These tools and concepts permit us to better understand the patterns of various real-life systems and help us to comprehend the mechanisms behind which distinct factors shaping some complex systems phenomena being influenced. This book is published in conjunction with the International Workshop on Complex Systems Modelling & Simulation 2019 (CoSMoS 2019): IoT & Big Data Integration. This international event was held at the Universiti Sains Malaysia Main Campus, Penang, Malaysia, from 8 to 11 April 2019. This book appeals to readers interested in complex systems research and other related areas such as mathematical modelling, numerical simulation and agent-based modelling frameworks.

Catalyst Separation, Recovery and Recycling

David J. Cole-Hamilton, Robert P. Tooze, 2006-01-13

This book looks at new ways of tackling the problem of separating reaction products from homogeneous catalytic solutions. The new processes involve low leaching supported catalysts, soluble supports such as polymers and dendrimers and unusual solvents such as water, fluorinated organics, ionic liquids and supercritical fluids. The advantages of the different possibilities are discussed alongside suggestions for further research that will be required for commercialisation. Unlike other books, in addition to the chemistry involved, the book looks at the process design that would be required to bring the new approaches to fruition. Comparisons are given with existing processes that have already been successfully applied and examples are given where these approaches are not suitable. The book includes: - New processes for the separation of products from solutions containing homogeneous catalysts - Catalysts on insoluble or soluble supports - fixed bed catalysts - continuous flow or ultrafiltration - Biphasic systems: water - organic, fluorous - organic, ionic liquid -

organic, supercritical fluids (monophasic or biphasic with water, organic or ionic liquid) - Comparisons with current processes involving atmospheric or low temperature distillation - Consideration of Chemistry and Process Design - Advantages and disadvantages of each process exposed - Consideration of what else is need for commercialisation

Bifurcation and Symmetry

BÖHMER, ALLGOWER, GOLUBITSKY, 2013-03-08 Symmetry is a property which occurs throughout nature and it is therefore natural that symmetry should be considered when attempting to model nature. In many cases, these models are also nonlinear and it is the study of nonlinear symmetric models that has been the basis of much recent work. Although systematic studies of nonlinear problems may be traced back at least to the pioneering contributions of Poincare, this remains an area with challenging problems for mathematicians and scientists. Phenomena whose models exhibit both symmetry and nonlinearity lead to problems which are challenging and rich in complexity, beauty and utility. In recent years, the tools provided by group theory and representation theory have proven to be highly effective in treating nonlinear problems involving symmetry. By these means, highly complex situations may be decomposed into a number of simpler ones which are already understood or are at least easier to handle. In the realm of numerical approximations, the systematic exploitation of symmetry via group representation theory is even more recent. In the hope of stimulating interaction and acquaintance

with results and problems in the various fields of applications, bifurcation theory and numerical analysis, we organized the conference and workshop Bifurcation and Symmetry: Cross Influences between Mathematics and Applications during June 2-7,8-14, 1991 at the Philipps University of Marburg, Germany.

Mental Health and Crime Jill Peay, 2010-10-04

Does mental disorder cause crime? Does crime cause mental disorder? And if either of these could be proved to be true what consequences should stem for those who find themselves deemed mentally disordered offenders? Mental Health and Crime examines the nature of the relationship between mental disorder and crime. It concludes that the broad definition of what is an all too common human condition – mental disorder – and the widespread occurrence of an equally all too common human behaviour – that of offending – would make unlikely any definitive or easy answer to such questions. For those who offend in the context of mental disorder, many aspects of the criminal justice process, and of the disposals that follow, are adapted to take account of a relationship between mental disorder and crime. But if the very relationship is questionable, is the way in which we deal with such offenders discriminatory? Or is it perhaps to their benefit to be thought of as less responsible for their offending than fully culpable offenders? The book thus explores not only the nature of the relationship, but also the human rights and legal issues arising. It also looks at some of the permutations in the therapeutic process that can ensue when those with

mental health problems are treated in the context of their offending behaviour.

Smithells Metals Reference Book E A Brandes,G B Brook,2013-10-22 Reviews of previous editions: 'A publication of no equal that has become an essential reference during its 35 years of publication' ASLIB Book List 'All metallurgists will covet a copy of Smithells' Chemistry and Industry '(It) provides an invaluable reference source for all workers, libraries and research laboratories in the field of engineering and metallurgy' BNF Abstract Smithells is the only single volume that provides all the data and references needed by those practicing metallurgy. The seventh edition of this standard reference work for metallurgists includes important new chapters on powder metallurgy and superconductivity. All chapters have been thoroughly revised to bring them up to date with developments since the last edition in 1983. In all this is the most complete compendium of information for industrial and theoretical metallurgists, and it is now available in a more accessible format including current data to 1997. Also available is Smithells Light Metals Handbook (ISBN 0750636254). THE standard reference work for metallurgists Contains all data for researchers and professional metallurgists Fully updated to the latest revisions of international standards

American Megafaunal Extinctions at the End of the Pleistocene Gary Haynes,2008-12-23 The volume contains summaries of facts, theories, and unsolved problems pertaining to the unexplained

extinction of dozens of genera of mostly large terrestrial mammals, which occurred ca. 13,000 calendar years ago in North America and about 1,000 years later in South America. Another equally mysterious wave of extinctions affected large Caribbean islands around 5,000 years ago. The coupling of these extinctions with the earliest appearance of human beings has led to the suggestion that foraging humans are to blame, although major climatic shifts were also taking place in the Americas during some of the extinctions. The last published volume with similar (but not identical) themes -- Extinctions in Near Time -- appeared in 1999; since then a great deal of innovative, exciting new research has been done but has not yet been compiled and summarized. Different chapters in this volume provide in-depth resumés of the chronology of the extinctions in North and South America, the possible insights into animal ecology provided by studies of stable isotopes and anatomical/physiological characteristics such as growth increments in mammoth and mastodont tusks, the clues from taphonomic research about large-mammal biology, the applications of dating methods to the extinctions debate, and archeological controversies concerning human hunting of large mammals.
