The Evolution of Military Power in the West and Asia Pauline Eadie, Wyn Rees, 2015-09-16 This book investigates how states in both the West and Asia have responded to multi-dimensional security challenges since the end of the Cold War, focusing on military transformation. Looking at a cross-section of different countries, this volume assesses how their armed forces have responded to a changing international security context. The book investigates two main themes. First, how the process of military 'transformation' - in terms of technological advances and new ways of conducting warfare - has impacted on the militaries of various countries. These technologies are hugely expensive and the extent to which different states can afford them, and the ability of these states to utilise these technologies, differs greatly. Second, the volume investigates the social dimensions of military transformation. It reveals the expanding breadth of tasks that contemporary armed forces have been required to address. This includes the need for military forces to work with other actors, such as non-governmental agencies and humanitarian organisations, and the ability of armed forces to fight asymmetric opponents and conduct post-conflict reconstruction tasks. The conflicts in Iraq and Afghanistan exemplified how important the relationship between technological and social transformation has become. This book will be of much interest to students of strategic studies, military innovation, Asian politics, security studies and International Relations.

Beria Amy Knight, 2020-06-16 This is the first comprehensive biography of Lavrentii Beria, Stalin's notorious police chief and for many years his most powerful lieutenant. Beria has long symbolized all the evils of Stalinism, haunting the public imagination both in the West and in the former Soviet Union. Yet because his political opponents expunged his name from public memory after his dramatic arrest and execution in 1953, little has been previously published about his long and tumultuous career.

Intelligence and Cultural Environment (Psychology Revivals) Philip E. Vernon, 2014-01-27 Originally published in 1969, *Intelligence and Cultural Environment* looks at the concept of intelligence and the factors influencing the mental development of children, including health and nutrition, as well as child-rearing practices. It goes on to discuss the application of intelligence tests in non-Western countries and includes both British and cross-cultural studies to illustrate this. Inevitably a product of the time in which it was written, this book nonetheless makes a valuable contribution to intelligence theory as we know it today.

Geologically Storing Carbon Peter Cook, 2014-08-18 Carbon capture and geological storage (CCS) is presently the only way that we can make deep cuts in emissions from fossil fuel-based, large-scale sources of CO₂ such as power stations and industrial plants. But if this technology is to be acceptable to the community, it is essential that it is credibly demonstrated by world-class scientists and engineers in an open and transparent manner at a commercially significant scale. The aim of the Otway Project was to do just this. *Geologically Storing Carbon* provides a detailed account of the CO₂CRC Otway Project, one of the most comprehensive demonstrations of the deep geological storage or geosequestration of carbon dioxide undertaken anywhere. This book of 18 comprehensive chapters written by leading experts in the field is concerned with outstanding science, but it is not just a collection of scientific papers - it is about 'learning by doing'. For example, it explains how the project was organised, managed, funded and constructed, as well as the approach taken to community issues, regulations and approvals. It also describes how to understand the site: Are the rocks mechanically suitable? Will the CO₂ leak? Is there enough storage capacity? Is monitoring effective? This is the book for geologists, engineers, regulators, project developers, industry, communities or anyone who wants to better understand how a carbon storage project really 'works'. It is also for people concerned with obtaining an in-depth appreciation of one of the key technology options for decreasing greenhouse emissions to the atmosphere.

Learning from Shanghai Charlene Tan, 2012-11-27 The Shanghai school system has attracted worldwide attention since its impressive performance in the Programme for International Student Assessment (PISA) in 2009. The system ranks as a 'stunning success' according to standards of the Organisation for Economic Co-operation and Development (OECD). Shanghai also stands out for having the world's highest percentage of 'resilient students' - students from socio-economically disadvantaged backgrounds who emerge as top performers. *Learning From Shanghai: Lessons on Educational Success* offers a close-up view of the people and the policies that have achieved such world-class performance. Based on research and personal observation gathered during the author's recent field work with school principals, teachers and students, this book explores the factors that explain Shanghai's exceptional success in education. The approach combines high standards of scholarly research and analysis with the author's unique personal insights, as evidenced by chapters entitled *Education is Filling a Bucket* and *Lighting a Fire* and *Tiger Mothers, Dragon Children*. Drawing on her experience as an education professional and a teacher of teachers, Charlene Tan thoroughly examines and analyzes the people, the policies and the practices that distinguish Shanghai educators. The contents include comprehensive details on the Shanghai approach to quality education, from discussion of the balance between centralization and decentralization, to school autonomy and accountability, to testing policy and professional development for teachers. The book includes detailed tables on curriculum and school performance targets, sample appraisal forms for teachers and students, and dozens of photographs. The author is an Associate Professor at the National Institute of Education, Nanyang Technological University, Singapore.

Robustness Tests for Quantitative Research Eric Neumayer, Thomas Plümper, 2017-08-11 The uncertainty that researchers face in specifying their estimation model threatens the validity of their inferences. In regression analyses of observational data, the 'true model' remains unknown, and researchers face a choice between plausible alternative specifications. Robustness testing allows researchers to explore the stability of their main estimates to plausible variations in model specifications. This highly accessible book presents the logic of robustness testing, provides an operational definition of robustness that can be applied in all quantitative research, and introduces readers to diverse types of robustness tests. Focusing on each dimension of model uncertainty in separate chapters, the authors provide a systematic overview of existing tests and develop many new ones. Whether it be uncertainty about the population or sample, measurement, the set of explanatory variables and their functional form, causal or temporal heterogeneity, or effect dynamics or spatial dependence, this book provides

guidance and offers tests that researchers from across the social sciences can employ in their own research.

Advances in Nonlinear Dynamos Antonio Ferriz-Mas,Manuel Nunez,2019-07-17 Nonlinear dynamo theory is central to understanding the magnetic structures of planets, stars and galaxies. In chapters contributed by some of the leading scientists in the field, this text explores some of the recent advances in the field. Both kinetic and dynamic approaches to the subject are considered, including fast dynamos, topological methods in dynamo theory, physics of the solar cycle and the fundamentals of mean field dynamo. Advances in Nonlinear Dynamos is ideal for graduate students and researchers in theoretical astrophysics and applied mathematics, particularly those interested in cosmic magnetism and related topics, such as turbulence, convection, and more general nonlinear physics.

A Feast of Flowers Christopher Krupa,2022-04-05 In A Feast of Flowers, Christopher Krupa focuses on Ecuador's booming cut-flower sector and shows how capitalist expansion bound the Global South to new modes of financial dependency and subjected indigenous workers to elaborate forms of racial improvement and uplift.

Health Care in Crisis Theresa Morris,2018-07-17 More and more not-for-profit hospitals are becoming financially unstable and being acquired by large hospital systems. The effects range from not having necessary life-saving equipment to losing the most experienced nurses to better jobs at other hospitals. In Health Care in Crisis, Theresa Morris takes an in-depth look at how this unintended consequence of the Affordable Care Act plays out in a non-profit hospital's obstetrical ward. Based on ethnographic observations of and in-depth interviews with obstetrical nurses and hospital administrators at a community, not-for-profit hospital in New England, Health Care in Crisis examines how nurses' care of patients changed over the three-year period in which the Affordable Care Act was implemented, state Medicaid funds to hospitals were slashed, and hospitals were being acquired by a for-profit hospital system. Morris explains how the tumultuous political-economic changes have challenged obstetrical nurses, who are at the front lines of providing care for women during labor and birth. --
