**Gibraltar Roy Adkins,Lesley Adkins,2018-03-13** A rip-roaring account of the dramatic four-year siege of Britain's Mediterranean garrison by Spain and France—an overlooked key to the British loss in the American Revolution For more than three and a half years, from 1779 to 1783, the tiny territory of Gibraltar was besieged and blockaded, on land and at sea, by the overwhelming forces of Spain and France. It became the longest siege in British history, and the obsession with saving Gibraltar was blamed for the loss of the American colonies in the War of Independence. Located between the Mediterranean and Atlantic, on the very edge of Europe, Gibraltar was a place of varied nationalities, languages, religions, and social classes. During the siege, thousands of soldiers, civilians, and their families withstood terrifying bombardments, starvation, and disease. Very ordinary people lived

through extraordinary events, from shipwrecks and naval battles to an attempted invasion of England and a daring sortie out of Gibraltar into Spain. Deadly innovations included red-hot shot, shrapnel shells, and a barrage from immense floating batteries. This is military and social history at its best, a story of soldiers, sailors, and civilians, with royalty and rank and file, workmen and engineers, priests, prisoners of war, spies, and surgeons, all caught up in a struggle for a fortress located on little more than two square miles of awe-inspiring rock. Gibraltar: The Greatest Siege in British History is an epic page-turner, rich in dramatic human detail—a tale of courage, endurance, intrigue, desperation, greed, and humanity. The everyday experiences of all those involved are brought vividly to life with eyewitness accounts and expert research.

Valmohammadi,2024-01-27 This is an open access book. In the current situation of rapid economic development, the competition in the market is increasingly fierce. The drawbacks of traditional enterprise management and the backward management concept have seriously hindered the normal development of enterprises. In order to improve their competitive advantages and market share, enterprises must optimize their management methods and build a modern business administration system. In this situation, enterprises can only promote their development process by improving their business management mode and formulating scientific business management policies. Data science is one of the most important tools for optimizing business administration. Data science is an interdisciplinary field that uses scientific methods,

processes, algorithms and systems to extract value from data. Data scientists use a combination of skills (including statistics, computer science and business knowledge) to analyze data collected from the Web, smartphones, customers, sensors and other sources. Data is the cornerstone of innovation, and data scientists gather information from data, discovering hidden trends from raw data and generating insights that companies can use to transform business problems into research projects that can then be translated back into practical solutions. Based on this, BADS 2023 discusses the state of modern business administration and the corresponding improvement measures in the context of the current reality, and It also provides a platform for scholars in related fields to exchange and share information, discuss how the two affect each other, and promote the modernization of business administration by studying certain business administration issues. To open new perspectives, broaden horizons, and examine the issues being discussed by the participants. Create an international-level forum for sharing, research and exchange that will expose participants to the latest research directions, results and content in different fields, thus inspiring them to come up with new research ideas.
