*Just for Clicks* Kara McDowell,2019-02-19 Mommy blogs are great . . . unless the blog happens to belong to your mom. Twin sisters Claire & Poppy are accidental social media stars thanks to Mom going viral when they were babies. Now, as teens, they're expected to contribute by building their own brand. Attending a NY fashion week and receiving fan mail is a blast. Fending off internet trolls and would-be kidnappers? Not so much. Poppy embraces it. Claire hates it. Will anybody accept her as just Claire? And what should Claire do about Mom's old journals? The handwritten entries definitely don't sound like Mom's perfect blog persona. Worse, one of them divulges a secret that leaves Claire wondering what else in her life might be nothing but a sham . . .

**Auditory Temporal Processing and its Disorders** Jos J. Eggermont,2015-04-30 'Auditory temporal processing' determines our understanding of speech, our appreciation of music, our ability to localize a sound source, and even to listen to a person in a noisy crowd. Sound is dynamic and as such has temporal and spectral content. In disorders such as auditory neuropathy and MS, problems can occur with these temporal representations of sound, leading to a mismatch between auditory sensitivity and speech discrimination. In dyslexia, specific language impairment, and auditory processing disorders, similar problems occur early in life and set up additional cognitive speech processing problems. It has also been found that in disorders such as autism, schizophrenia and epilepsy, temporal processing deficits can occur. This book reviews comprehensively the mechanisms for temporal processing in the auditory system, looking at how these underlie specific clinical disorders, with implications for their treatment. Written by a prolific researcher in auditory neuroscience, this book is valuable for auditory neuroscientists, audiologist, neurologists, and speech language pathologists.

An Introduction to African Languages George Tucker Childs,2003-01-01 This book introduces beginning students and non-specialists to the diversity and richness of African languages. In addition to providing a solid background to the study of African languages, the book presents linguistic phenomena not found in European languages. A goal of this book is to stimulate interest in African languages and address the question: What makes African languages so fascinating? The orientation adopted throughout the book is a descriptive one, which seeks to characterize African languages in a relatively succinct and neutral manner, and to make the facts accessible to a wide variety of readers. The author's lengthy acquaintance with the continent and field experiences in western, eastern, and southern Africa allow for both a broad perspective and considerable depth in selected areas. The original examples are often the author's own but also come from other sources and languages not often referenced in the literature. This text also includes a set of sound files illustrating the phenomena under discussion, be they the clicks of Khoisan, talking drums, or the ideophones (words like English lickety-split) found almost everywhere, which will make this book a valuable resource for teacher and student alike.

**Echolocation in Bats and Dolphins** Jeanette A. Thomas,Cynthia F. Moss,Marianne Vater,2004 Although bats and dolphins live in very different environments, are vastly different in size, and hunt different kinds of prey, both groups have evolved similar sonar systems, known as echolocation, to locate food and navigate the skies and seas. While much research has been conducted over the past thirty years on echolocation in bats and dolphins, this volume is the first to compare what is known about echolocation in each group, to point out what information is missing, and to identify future areas of research. Echolocation in Bats and Dolphins consists of six sections: mechanisms of echolocation signal production; the anatomy and physiology of signal reception and interpretation; performance and cognition; ecological and evolutionary aspects of echolocation mammals; theoretical and methodological topics; and possible echolocation capabilities in other mammals, including shrews, seals, and baleen whales. Animal behaviorists, ecologists, physiologists, and both scientists and engineers who work in the field of bioacoustics will benefit from this book.
