Automated Software and Service Composition Felix Mohr, 2016-06-17 This book is by far the most systematic and comprehensive review of the field of automated software composition. Based on a formally described and reproducible methodology, it critically discusses the approaches, which are relevant for experts interested in an organized overview of related work. It also provides an introduction and intuitive classification system for researchers new to the field. In order to create this survey, several dozen papers were analyzed with respect to the concrete problems they tackle and the proposed solutions. It delivers both an overview and a qualitative comparison of the approaches, and answers three research questions: What types of automated software composition problems exist? In which use cases do these problems typically occur? And what are the most prominent solution paradigms for the different types? Overall, this book saves a great deal of time for everyone pursuing research in the area of automated software composition who needs a comprehensive guide that helps them understand the field, and that relates new approaches to existing ones.

Automation and Collaborative Robotics Peter Matthews, Steven Greenspan, 2020-06-30

Understand the current and future research into technologies that underpin the increasing capabilities of automation technologies and their impact on the working world of the future. Rapid advances in automation and robotics technologies are often reported in the trade and general media, often relying on scary headlines such as “Jobs Lost to Robots.” It is certainly true that work will change with the advent of smarter and faster automated workers; however, the scope and scale of the changes is still unknown. Automation may seem to be here already, but we are only at the early stages. Automation and Collaborative Robotics explores the output of current research projects that are improving the building blocks of an automated world. Research into collaborative robotics (cobotics) is merging digital, audio, and visual data to generate a commonly held view between cobots and their human collaborators. Low-power machine learning at the edge of the network can deliver decision making on cobots or to their manipulations. Topics covered in this book include: Robotic process automation, chatbots, and their impact in the near future The hype of automation and headlines leading to concerns over the future of work Component technologies that are still in the research labs Foundational technologies and collaboration that will enable many tasks to be automated with human workers being re-skilled and displaced rather than replaced What You Will Learn Be aware of the technologies currently being researched to improve or deliver automation Understand the impact of robotics, other automation technologies, and the impact of AI on automation Get an idea of how far we are from implementation of an automated future Know what work will look like in the future with the deployment of these technologies Who This Book Is For Technical and business managers interested in the future of automation and robotics, and the impact it will have on their organizations,

customers, and the business world in general

Building Trustworthy Digital Repositories Philip C. Bantin,2016-07-01 Building Trustworthy Digital Repositories: Theory and Implementation combines information on both theory and practice related to creating trustworthy repositories for records into one up-to-date source. This book will bring all the credible theories into one place where they will be summarized, brought up to date, and footnoted. Moreover, the book will be international in its scope, and will discuss ideas coming from such important sources as Australia, Canada, and Western Europe. Until about five years ago, there were very few implementation projects in this area. This book brings together information on implementation projects that answer these questions: What is a trustworthy repository for digital records? Who is building these repositories, and what have been the results? How are institutions building or creating these repositories? How are institutions addressing the essential requirement related to the ingest or capture of records? How are institutions automatically and manually capturing essential metadata and audit trails? How are institutions implementing retention and disposal decisions within these systems? How are institutions implementing preservation strategies to ensure that digital objects are accessible over long periods of time? What is the current status of trustworthy repositories, and what will these systems look like in the future?
