**Multi-Fractal Traffic and Anomaly Detection in Computer Communications**

Ming Li,2023-01-09 This book provides a comprehensive theory of mono- and multi-fractal traffic, including the basics of long-range dependent time series and  $1/f$  noise, ergodicity and predictability of traffic, traffic modeling and simulation, stationarity tests of traffic, traffic measurement and the anomaly detection of traffic in communications networks. Proving that mono-fractal LRD time series is ergodic, the book exhibits that LRD traffic is stationary. The author shows that the stationarity of multi-fractal traffic relies on observation time scales, and proposes multi-fractional generalized Cauchy processes and modified multi-fractional Gaussian noise. The book also establishes a set of guidelines for determining the record length of traffic in measurement. Moreover, it presents an approach of traffic simulation, as well as the anomaly detection of traffic under distributed-denial-of-service attacks. Scholars and graduates studying network traffic in computer science will find the book beneficial.
