Essentials of Materials Management Prabhakar Ramachandra Gokarn, Moolamattom Varkey Pylee, 1970

Materials Management Rajendra Mishra, 2009 Materials management is an essential business function. It is concerned with managing materials, one of the four basic resources (labour, material, equipment, capital). Until recently, it was concerned with purchasing raw materials and very few parts from local markets. Raw materials were used to make most of the parts for making end products. Materials management was regarded as a routine function and was given less importance. But over the years, firms began to procure more and more parts and subassemblies from local as well as global markets. Today over 50% of the revenue of the firms goes for procuring materials, parts and subassemblies from outside. As a result, materials management function has evolved from a clerical buying function into a strategic business function that helps firms to survive and grow. It creates competitive edge by creating superior value by delivering quality product or service on time and offering lower cost by cutting its own cost as well as cutting purchased item cost. Very few of the available texts offer a comprehensive view of the subject & data and examples and cases in the context of Indian industries are limited. The contents of the subject are undergoing rapid changes. Earlier, purchasing was mostly confined to raw materials by manufacturing firms whereas now a large part of it consists of parts, subassemblies and assemblies, beside raw materials. A smaller number of suppliers are preferred now-a-days. Global sourcing is an accepted norm. A change in supplier relations from adversarial to partnership is evident. Lot sizes and lead-times are smaller and there is greater use of information technology. The book is designed to provide comprehensive coverage of the field of materials management by including emerging concepts, practices, tools, techniques, heuristics and quantitative models. Other features of the book include: v Important topics like outsourcing, purchase strategies and enterprise resource planning. v Cases from Indian industries on vendor managed inventory, outsourcing, and spare parts inventory. v Definition of key terms. v Questions at the end of each chapter and answers of selected questions. The book can serve as a text for undergraduate and postgraduate level courses on materials management in the institutes of management, engineering and technology, materials, industrial engineering, operations research and others. It can also serve as a reference for managers, engineers, consultants, and others interested in the field.

Purchasing and Materials Management Lamar Lee, Donald W. Dobler, 1977

Principles of Inventory and Materials Management Richard J. Tersine, 1988 This text/reference addresses the unprecedented changes occurring in manufacturing that are being brought about by quality management philosophy -- lower inventory, reduced lead-time, preventive maintenance, and increased emphasis on customer satisfaction. Combining theory and practice, it presents alternative systems (models) for managing materials (inventory) -- their use, transformation, distribution, and sale -- and their flow to, within, and from the organization. Covers

forecasting and marketing analysis; independent demand systems (deterministic models/probabilistic models); discrete demand systems (deterministic models/materials requirements planning - MRP); inventory system changes and limitations; single order quantities; in-process inventory, just-in-time, and theory of constraints; distribution inventory systems; inventory valuation and measurement; simulation; and aggregate inventory control. Content progresses from simple systems to more complex models; numerous examples of solved problems and short case studies explore a variety of situations and organizational settings; and appendices provide additional extensions and supporting logic on particular topics. For practitioners and advanced students involved in operations, inventory control, production control, and physical supply in manufacturing.
