Parametric Building Design Using Autodesk Maya Ming Tang,2014-03-26 Due to its comprehensive tool-set and great potential for 3D modeling, more and more architectural design and interior design firms are adapting Autodesk Maya and integrating it into their practice. There has been no book aimed at architects and designers who wish to harness the opportunities presented by this software, until now..... The book promotes parametric design. It integrates the theoretical research of computational design and Maya non-linear modeling techniques associated with simulation, animation, digital fabrication and form-finding within 2D & 3D design. Readers will learn: How to use Maya polygon and NURBS modeling tools to create non-linear procedural model. How to use Maya driver keys and relationship tools to generate parametrically negotiable solutions across various design professions. The design logic and generative processes, as well as the potential of parametric thinking as a resourceful tool for achieving diversity and complexity in form generation and fabrication. How to use Maya to prepare files for rapid prototyping and the integration of Maya into various fabrication techniques such as laser cutting, CNC milling, and 3D printing. How to create a digital simulation to simulate all aspects of surface properties and dynamic forces with Maya physics engine. How to use Maya skeleton system and animation tools to control complex architectural forms. How to create photo-realistic renderings with Maya lighting, material and texture mapping. Using several real projects as examples, the

book will go through the entire rendering process step by step. How to combine Maya with various CAD/BIM tools to create an efficient design pipeline. How to use Maya MEL script to create customized tools and interface. The book includes case studies from Zaha Hadid Architects, Greg Lynn Form, Gage Clemenceau Architects, Tang & Yang Architects, as well as step by step exercises, demonstration projects and crucially a fantastic online resource which includes video tutorials, scripts, and Maya source files.

A JOURNEY THROUGH ARCHITECTURE SCHOOL FOR FRESHERS Ar. ARUN KUMAR KOOTTHARASAN NADAR,2020-04-02 The book will run you through the experience of a typical architecture college in India. if you have finished 12th grade and are confused and looking for higher studies, and do not about what happens in architecture college then this book is for you. when I graduated 12th board exam and was looking for admissions in architecture I had no idea what the college experience would be like and what are the required things. there is kind of like no guide to prepare for the unknown. after getting into academics and experiencing and exploring things. I have a chance to tell the world through this book. The book is subjective and it doesn't violate any academic laws. also, the syllabus used in the book is the old syllabus and differs from different universities.

Blender 3D 2.49 Allan Brito,2010 Annotation Every type of construction_such as building a house, a movie set, or a virtual set_needs a project. These projects are made of a lot of documents and technical drawings, which help in the construction of those buildings. These technical drawings and documents are just fine, but when you need to make a presentation of these projects for people who can't read technical drawings, things can get a little difficult. To make presentations for people who can't read technical drawings, we use tools like Blender. With Blender we can create, texture, and generate photo-real images of a project. These images are helpful to architects or companies to

explain their projects in a better way. This book will show you how to generate real-looking architectural models quickly using Blender. You can also create natural scenery, landscapes, plants, various weather conditions, environmental factors, building materials such as wood, metal, brick, and more using Blender. As you walk through the chapters you will see that Blender is a tool, designed to give you high productivity and fast access to tools and menus helping you to create 3D models quickly for 3D visualization. You will learn how to add people to different scenes as well as other objects to an already existing photograph or a video making it easier to increase its realism. The process begins by learning how Blender user interface works then moves on and starts to deal with 3D modeling. In the 3D modeling chapters you will learn how to work with polygon-based modeling for architecture, creating walls and other architectural elements. But, a project is not only made of large scale models and this is the reason why you also learn to create 3D furniture. In the section about advanced lighting for architecture, you learn how to work with YafaRay to use global illumination techniques such as Photon Mapping and Path Tracing, and create photo-real renderings. In the last section of the book, dedicated to animation, we will create linear animation based on keyframes and interactive 3D applications. Create realistic models of building exteriors and interiors, the surrounding environment, and scenery.
