Sustainability in Energy Business and Finance Hasan Dinçer,Serhat Yüksel,2022-02-20 This edited volume seeks to identify the sustainability issues currently affecting the energy business and finance. For this purpose, a broad range of perspectives on sustainability issues in the energy business and finance are taken into consideration in the context of renewable business projects. In turn, several novel strategies from the energy business and finance are illustrated with regard to sustainable organizational factors, technological infrastructure, financial facilities, economic development, and investment potential. Comparing and contrasting different sustainability perspectives can help to develop the most appropriate and successful business strategies for the sustainable energy business and finance. This book presents multidimensional analyses of sustainability issues with regard to renewable energy projects and identifies the most promising strategies, as well as efficient market conditions for the energy business.

Economic Development and the Environmental Ecosystem Hasan Dincer,Serhat Yüksel,2023-04-17 This volume illustrates the relationship between environmental factors and economic development of countries from various angles. Global warming has become a problem that threatens the whole world, especially in recent years. It is known that the main reason for this is carbon emissions. On the other hand, carbon emissions generally consist of fossil fuel-based energy consumption. This situation creates very serious environmental problems. Because of this problem, the concept of carbon zero has become very popular, especially in recent years. Many countries take some actions to minimize carbon emissions. Especially in the coming years, carbon emissions will become a competitive factor for countries and businesses. In this respect, countries with low carbon emissions will be preferred more in foreign trade. In addition, businesses that do not generate carbon emissions in the production process will also gain a significant competitive advantage in international trade. The contributions take a multidimensional outlook to energy investments and offer solutions for decision-making for energy projects in risky business ecosystems.

Clean Energy Investments for Zero Emission Projects Hasan Dinçer,Serhat Yüksel,2022-08-31 This contributed volume analyses and discusses how atmospheric carbon emissions can be prevented using carbon capture and removal technology and how renewable energies can be used to reduce carbon emissions. Both approaches have their disadvantages. First of all, both involve high costs. Secondly, both require the use of advanced technology. As a result, many countries continue to use fossil fuels. The book seeks to address these problems by identifying strategies to increase countries' use of clean energy. The authors discuss the dilemmas of zero emission and competition in the energy industry and illustrate cross-country applications of the current trends in the form of zero-emission business projects.

Circular Economy and the Energy Market Hasan Dinçer,Serhat Yüksel,2022-10-28 Energy policies play a pivotal part in helping countries achieve their sustainable development goals. Further, energy is one of the critical raw materials in companies' production processes. Therefore, ensuring a steady energy supply is essential to increasing production; otherwise, countries will inevitably slide into recession. In this context, countries should select their energy policies on the basis of a comprehensive analysis. In order to achieve this goal, many different factors must be considered at the same time. The aim of this book is to determine the right energy policies for the sustainable economic development of countries. In this framework,

effective strategies for different types of energy will be presented and vital issues such as determining the right locations for nuclear power plants, providing optimal government incentives to increase clean energy investments, and determining appropriate energy policies to reduce energy dependence will be examined. Thus, country-specific optimal energy policies will be outlined, contributing to the achievement of the UN's sustainable development goals (SDG).
