Graphic Design Theory Helen Armstrong,2012-08-10 Graphic Design Theory is organized in three sections: Creating the Field traces the evolution of graphic design over the course of the early 1900s, including influential avant-garde ideas of futurism, constructivism, and the Bauhaus; Building on Success covers the mid- to late twentieth century and considers the International Style, modernism, and postmodernism; and Mapping the Future opens at the end of the last century and includes current discussions on legibility, social responsibility, and new media. Striking color images illustrate each of the movements discussed and demonstrate the ongoing relationship between theory and practice. A brief commentary prefaces each text, providing a cultural and historical framework through which the work can be evaluated. Authors include such influential designers as Herbert Bayer, L'szlo Moholy-Nagy, Karl Gerstner, Katherine McCoy, Michael Rock, Lev Manovich, Ellen Lupton, and Lorraine Wild. Additional features include a timeline, glossary, and bibliography for further reading. A must-have survey for graduate and undergraduate courses in design history, theory, and contemporary issues, Graphic Design Theory invites designers and interested readers of all levels to plunge into the world of design discourse.

Post-Digital Print Alessandro Ludovico,2019-04-23 Digital technology is now a normal part of everyday life. The mutation of music and film into bits and bytes, downloads and streams is now taken for granted. For the world of book and magazine publishing however, this transformation has only just begun. Still, the vision of this transformation is far from new. For more than a century now, avant-garde artists, activists and technologists have been anticipating the development of networked and electronic publishing. Although in hindsight the reports of the death of paper were greatly exaggerated, electronic publishing has now certainly become a reality. How will the analog and the digital coexist in the post-digital age of publishing? How will they transition, mix and cross over? In this book, Alessandro Ludovico rereads the history of the avant-garde arts as a prehistory of cutting through the so-called dichotomy between paper and electronics. Ludovico is the editor and publisher of Neural, a magazine for critical digital culture and media arts. For more than 20 years now, he has been working at the cutting edge (and the outer fringes) of both print publishing and politically engaged digital art.

Multimedia Applications, Services and Techniques - ECMAST'99 Helmut Leopold,Narciso Garcia,2003-06-26 The liberalisation in the telecommunication market and thus the advent of competition has had a tremendous impact on business in this area. New operators have started to offer telecommunication services in competition with the classical national network operators. This in turn will have an impact on the market share, the tariff structure, the Quality of Service (QoS) and the services offered to the end customers. A way to maintain or increase revenue for network operators is to additionally offer new services to the customers. The final target is a so-called Full Service Network (FSN), which is capable of offering all types of bi-directional multimedia services. The provisioning of new telecommunication services in general and new multimedia services in particular is made possible by the availability of several new technologies as well as through advances in standardisation. R&D policies world-wide but especially in Europe have forced the development of new networking technologies such as ATM, xDSL and HFC as well as new video technologies as defined by DVB and DAVIC.

Processing, second edition Casey Reas,Ben Fry,2014-12-19 The new edition of an introduction to computer programming within the context of the visual arts, using the open-source programming language Processing; thoroughly updated throughout. The visual arts are rapidly changing as media moves into the web, mobile devices, and architecture. When designers and artists learn the basics of writing software, they develop a new form of literacy that enables them to create new media for the present, and to imagine future media that are beyond the capacities of current software tools. This book introduces this new literacy by teaching computer programming within the context of the visual arts. It offers a comprehensive reference and text for Processing (www.processing.org), an open-source programming language that can be used by students, artists, designers, architects, researchers, and anyone who wants to program images, animation, and interactivity. Written by Processing's cofounders, the book offers a definitive reference for students and professionals. Tutorial chapters make up the bulk of the book; advanced professional projects from such domains as animation, performance, and installation are discussed in interviews with their creators. This second edition has been thoroughly updated. It is the first book to offer in-depth coverage of Processing 2.0 and 3.0, and all examples have been updated for the new syntax. Every chapter has been revised, and new chapters introduce new ways to work with data and geometry. New "synthesis" chapters offer discussion and worked examples of such topics as sketching with code, modularity, and algorithms. New interviews have been added that cover a wider range of projects. "Extension" chapters are now offered online so they can be updated to keep pace with technological developments in such fields as computer vision and electronics. Interviews SUE.C, Larry Cuba, Mark Hansen, Lynn Hershman Leeson, Jürg Lehni, LettError, Golan Levin and Zachary Lieberman, Benjamin Maus, Manfred Mohr, Ash Nehru, Josh On, Bob Sabiston, Jennifer Steinkamp, Jared Tarbell, Steph Thirion, Robert Winter

Mystic Isles of the South Seas Frederick O'Brien,1921 Most people have heard of Charles Bernard Nordhoff and James Norman Hall who came out to Tahiti and wrote Mutiny on the Bounty and its sequels, as well as Faery Lands of the South Seas, another installment in the Resnick Library of Worldwide Adventure. But there was another American, all but forgotten today, who traveled to the South Seas, fell in love with what he saw, and took pen to paper to share his experiences with those back home. His name was Frederick J. O'Brien, and, after working for a time for the Manila Times, he wrote a trio of books about what he had seen and experienced. Before the dust had cleared, he had written White Shadows in the South Seas, Mystic Isles of the

South Seas, and Atolls of the Sun -- all classics in the field, and until now all long out of print. Not meant to be in any way academic, these books are quite simply love poems written to the tropical paradise that was French Polynesia in the early years of the 20 th Century. As the author himself puts it in his foreword: It is for those who stay at home yet dream of foreign places that I have written this book, a record of one happy year spent among the simple, friendly cannibals....There is little of profound research. Nothing, I fear, to startle the anthropologist or to revise encyclopedias; such expectation was far from my thoughts when I sailed from Papeite on the Morning Star. I went to see what I should see, and to learn whatever should be taught me by the days as they came. What I saw and what I learned the reader will see and learn, and no more. With plenty of photographs to illustrate his text, O'Brien has given readers a glimpse of South Seas life the way it used to be -- and through hisown words, we feel as though we have been there.

Introduction to Gauge Field Theory Revised Edition D. Bailin,Alexander Love,1993-01-01 Introduction to Gauge Field Theory provides comprehensive coverage of modern relativistic quantum field theory, emphasizing the details of actual calculations rather than the phenomenology of the applications. Forming a foundation in the subject, the book assumes knowledge of relativistic quantum mechanics, but not of quantum field theory. The book is ideal for graduate students, advanced undergraduates, and researchers in the field of particle physics.
