Artifacts Charles R. Ewen,2003 The Archaeologist's Toolkit is an integrated set of seven volumes designed to teach novice archaeologists and students the basics of doing archaeological fieldwork, analysis, and presentation. Students are led through the process of designing a study, doing survey work, excavating, properly working with artifacts and biological remains, curating their materials, and presenting findings to various audiences. The volumes-written by experienced field archaeologists-are full of practical advice, tips, case studies, and illustrations to help the reader. All of this is done with careful attention to promoting a conservation ethic and an understanding of the legal and practical environment of contemporary American cultural resource laws and regulations. The Toolkit is an essential resource for anyone working in the field and ideal for training archaeology students in classrooms and field schools.

Artifacts in Behavioral Research Robert Rosenthal,Ralph L. Rosnow,2009-08-03 This new combination volume of three-books-in-one, dealing with the topic of artifacts in behavioral research, was designed as both introduction and reminder. It was designed as an introduction to the topic for graduate students, advanced undergraduates, and younger researchers. It was designed as a reminder to more experienced researchers, in and out of academia, that the problems of artifacts in behavioral research, that they may have learned about as beginning researchers, have not gone away. For example, problems of experimenter effects have not been solved. Experimenters still differ in the ways in which they see, interpret, and manipulate their data. Experimenters still obtain different responses from research participants (human or infrahuman) as a function of experimenters' states and traits of biosocial, psychosocial, and situational origins. Experimenters' expectations still serve too often as self-fulfilling prophecies, a problem that biomedical researchers have acknowledged and guarded against better than have behavioral researchers; e.g., many biomedical studies would be considered of unpublishable quality had their experimenters not been blind to experimental condition. Problems of participant or subject effects have also not been solved. We usually still draw our research samples from a population of volunteers that differ along many dimensions from those not finding their way into our research. Research participants are still often suspicious of experimenters' intent, try to figure out what experimenters are after, and are concerned about what the experimenter thinks of them.

Certain Artifacts From San Miguel Island, California Volume No. 4; Volume 7 George G (George Gustav) 1874 Heye,2023-07-18 This archaeological study examines the artifacts found on San Miguel Island, off the coast of California, and provides insights into the lives and culture of the Native American people who lived there. Teggart and Heye analyze the materials and techniques used to create these artifacts, such as stone tools and shell ornaments, to infer the social and economic structures of these communities. A fascinating look at the pre-colonial history of California. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Ornaments and Other Ambiguous Artifacts from Franchthi Catherine Perlès, 2023-12-05 The famous Franchthi Cave excavations in Greece brought to light an exceptionally long sequence of ornaments, spanning from the earliest Upper Paleolithic to the end of the Neolithic. This volume focuses on the Neolithic, whose assemblages are far more diversified than those of earlier times. The introduction during the Neolithic of entirely artificial shapes, geometric and anthropomorphic, creates a marked departure from earlier periods and shows new directions in creativity by the bead makers. It also denotes a conceptual break in the treatment of shell, no longer solely a natural element barely modified by perforation, but now also a raw material rendered anonymous by workmanship. Due to the systematic sieving of the sediments and its location by the sea, the Franchthi cave and its outdoor settlement, the Paralia, yielded one of the richest collection of ornaments for Neolithic Greece.

How Artifacts Afford Jenny L. Davis, 2020-08-11 A conceptual update of affordance theory that introduces the mechanisms and conditions framework, providing a vocabulary and critical perspective. Technological affordances mediate between the features of a technology and the outcomes of engagement with that technology. The concept of affordances, which migrated from psychology to design with Donald Norman's influential 1988 book, *The Design of Everyday Things*, offers a useful analytical tool in technology studies—but, Jenny Davis argues in *How Artifacts Afford*, it is in need of a conceptual update. Davis provides just such an update, introducing the mechanisms and conditions framework, which offers both a vocabulary and necessary critical perspective for affordance analyses. The mechanisms and conditions framework shifts the question from what objects afford to how objects afford, for whom, and under what circumstances. Davis shows that through this framework, analyses can account for the power and politics of technological artifacts. She situates the framework within a critical approach that views technology as materialized action. She explains how request, demand, encourage, discourage, refuse, and allow are mechanisms of affordance, and shows how these mechanisms take shape through variable conditions—perception, dexterity, and cultural and institutional legitimacy. Putting the framework into action, Davis identifies existing methodological approaches that complement it, including critical technocultural discourse analysis (CTDA), app feature analysis, and adversarial design. In today's rapidly changing sociotechnical landscape, the stakes of affordance analyses are high. Davis's mechanisms and conditions framework offers a timely theoretical reboot, providing tools for the crucial tasks of both analysis and design.

Analysis of Artifacts from Four Duke Point Area Sites, Near Nanaimo, B.C. Rebecca Anne Wukasch Murray, 1982-01-01 Using artifact data collected and analyzed in 1978 from 4 sites in the Duke Point area and comparable data from other sites in the southern Gulf of Georgia region, it is demonstrated that perceived differences in artifact assemblages, particularly on a presence/absence basis, are not as clear-cut as they were once considered to be. Rather, the significant differences lie in the relative frequencies and percentages of certain artifact types. The utility of the current three-part framework for archaeological analysis, which has encouraged the interpretation of migration, diffusion, and independent invention to explain the origins and temporal variation of culture in the southern Gulf of Georgia region, is critically examined.

Objects of Liberty Pamela Buck, 2024-03-15 *Objects of Liberty* explores the prevalence of souvenirs in British women's writing during the French Revolution and Napoleonic era. It argues that women writers employed the material and memorial object of the souvenir to circulate revolutionary ideas and engage in the masculine realm of political debate. While souvenir collecting was a standard practice of privileged men on the eighteenth-century Grand Tour, women began to partake in this endeavor as political events in France heightened interest in travel to the Continent. Looking at travel accounts by Helen Maria Williams, Mary Wollstonecraft, Catherine and Martha Wilmot, Charlotte Eaton, and Mary Shelley, this study reveals how they used souvenirs to affect political thought in Britain and contribute to conversations about individual and national identity. At a time when gendered beliefs precluded women from full citizenship, they used souvenirs to redefine themselves as legitimate political actors. *Objects of Liberty* is a story about the ways that women established political power and agency through material culture.

Artifacts Versus Nature Body Masayuki Matsui, 2023-12-30 This book proposes a wealth-additive scheme of managing and maximizing (win-win and sharing) the marginal value (eco-entropy) of artifacts by humanizing the artifacts' enterprise and their economics with nature. This type of clockwork would be achieved on a base of the science of nature versus artifacts and the body of science in my Springer books since 2008. My books are advancing factory science, economics, and the science of artifacts and play their role in the sandwich theory and its pair-map microcosm of the 3D-type, toward the development of body science. Then, the wealth-additive goal of the "body" is not only similar to the marginal profit, GDP, and value in economics, but also means the marginal diversity (eco-entropy) and its wealth of economics versus reliability (sustainability) in the body of the world. The modern world, for example, is faced with deadlocked negotiations over the Sustainable Development Goals (SDGs) bodies at the United Nations. Thus, the forthcoming world of SDGs would be much better and more constructive at transforming traditional bodies of the 3M&I class (human, material, money, and information) as some nano (gene/therblig)-transformation toward eco-entropy (marginal value/diversity) on earth. This semi-visible world is traditionally limited to a molecular size and is too rough at the practical rig-level. Thus, any unsolved and invisible contradictions left behind on earth are subject to SDGs in the practical world. This approach proposes a visible method that could find and solve these contradictions (angles) by transforming the artifact's body, consisting of the 3M&I gene. The pair-map microcosm and its Matsui's M-equation have been designed mainly based on nature and science books on artifacts (in 2016 and 2019). Following these visible methods, our well-being subject might be able to make a breakthrough or make such unsolved contradictions or stalemates subside as any SDGs society of individuals in the near future. Finally, the book will explore and construct a new academic discipline involving 3M&I body science versus cybernetics. And, the study introduces validation cases of convenience stores, self-driving cars, and robotization (individualization) of artificial objects as the realization of the supply-demand system and the ideal form of artificial and natural bodies. Based on this perspective, the dialogue is conducted

according to a creative structure of six parts, twelve chapters, and two appendices.
