Advanced Analytics and Artificial Intelligence

Applications Ali Soofastaei,2019-11-13 Computers and machines were developed to reduce time consumption and manual human efforts to complete projects efficiently. With fast-growing technologies in the field, we have finally reached a stage where almost everyone in the world has access to these high technologies. However, this is just a starting phase because future development is taking a more advanced route in the shape of artificial intelligence (AI). Although AI is under the computer science umbrella, nowadays there is no field unaffected by this high technology. The overall aim of using intelligence learning methods is to train machines to think intelligently and make decisions in different situations the same as humans. Previously, machines were doing what they were programmed to do, but now with AI, devices can think and behave like a human being. This book aims to present the application of advanced analytics and AI in different industries as practical tools to develop prediction, optimization, and make decision models.

Inside OrCAD Chris Schroeder,1996-06-21 Inside OrCAD goes beyond the reference guide supplied by OrCAD. It contains an overview and introduction to modern schematic drafting, with exercises intended to help the reader master the use of OrCAD via a 'hands-on' learning experience - information that has been de-emphasized in the manuals for recent OrCAD versions.This introduction to OrCAD is designed to give easy access to practical information. The command reference is a complete listing

and explanation of the OrCAD commands and functions. A series of appendices provide important tips and techniques and information about linking OrCAD to other Computer Aided Design and Computer Aided Engineering tools used in the electronics design process. The enclosed disk contains a parts library for the tutorial exercises and several useful utilities, making this book a valuable tool for the design engineer or engineering student. Chris Schroeder is the Technical Director, Electronics, For Crane Technologies Group, Inc., Daytona Beach, Florida, a leading automotive aftermarket and original equipment supplier. He has 19 years of engineering, marketing, and management experience in the electronics industry and has a broad, yet in-depth technical knowledge of both design and manufacturing. His specialized areas of design expertise include: embedded controls using RISC microcontroller technology, assembly language programming, magnetic design for switching power supplies and ignition coils, and printed circuit board design, including the use of surface mount technology. Provides a detailed tutorial. Contains tips and techniques for design engineers. Includes a library and utilities disc.

Advanced Materials and Technologies for Micro/Nano-Devices, Sensors and Actuators Evgeni Gusev, Eric Garfunkel, Arthur Dideikin, 2010-03-15 A NATO Advanced Research Workshop (ARW) entitled "Advanced Materials and Technologies for Micro/Nano Devices, Sensors and Actuators" was held in St. Petersburg, Russia, from June 29 to July 2, 2009. The main goal of the Workshop was to examine (at a fundamental level) the very complex scientific issues that pertain to the use of micro- and nano-electromechanical systems (MEMS and NEMS), devices and technologies in next generation commercial and defense-related applications. Micro- and nano-electromechanical

systems represent rather broad and diverse technological areas, such as optical systems (micromirrors, waveguides, optical sensors, integrated subsystems), life sciences and lab equipment (micropumps, membranes, lab-on-chip, membranes, microfluidics), sensors (bio-sensors, chemical sensors, gas-phase sensors, sensors integrated with electronics) and RF applications for signal transmission (variable capacitors, tunable filters and antennas, switches, resonators). From a scientific viewpoint, this is a very multidisciplinary field, including micro- and nano-mechanics (such as stresses in structural materials), electronic effects (e. g. charge transfer), general electrostatics, materials science, surface chemistry, interface science, (nano)tribology, and optics. It is obvious that in order to overcome the problems surrounding next-generation MEMS/NEMS devices and applications it is necessary to tackle them from different angles: theoreticians need to speak with mechanical engineers, and device engineers and modelers to listen to surface physicists. It was therefore one of the main objectives of the workshop to bring together a multidisciplinary team of distinguished researchers.

Electronic Supply Chain Collaboration for Small Job Shop Manufacturers Thomas Magnuson Coe, 2005-03 Driven to

improve their competitive advantages, manufacturers are looking to electronic supply chain collaboration (ESCC). The benefits of ESCC have long been described in the literature, but only recently, after considerable advances in the capability of information technology, have these benefits been verified by empirical studies. The high cost of ESCC has limited its early application to larger companies. Although interest in ESCC is high in business and information systems circles, the large group of small manufacturers has received meager attention. Theory suggests, however, that ESCC benefits are maximized as more supply chain partners integrate their information systems into a supply chain network. This exploratory triangulation study considered the current state and future implications of ESCC for the small job shop manufacturer. Three lines of research addressed the problem in terms of the SJSM business environment, ESCC technology, and success cases studies. The study found that ESCC integration is proceeding slowly, impeded primarily by a lack of standards for data integration. Advances in the Internet and related technology have, however, eliminated all but the last few barriers to ESCC. The remaining barriers are likely to fall pending acceptance of new ESCC standards such as RosettaNet. ESCC is already well established in select industries and will accelerate into other industries as standards develop. Currently, most ESCC activity is between top- and mid-tier manufacturers, but this activity will eventually spread down to third-tier small manufacturers. The study found no evidence that true integration, or the exchange of data between trading partners without retyping, is currently practical for most SJSMs. The study did find that low-integration ESCC is currently practical for SJSMs. In low-integration ESCC, manufacturers use Web portals to remotely access their

trading partners' information systems. Low-integration ESCC can be implemented at low cost and offers advantages such as positive return on investment, competitive advantage, and a head start toward advanced ESCC. At the time of the study, only a few SJSMs had attempted even low-integration ESCC. SJSMs have, however, widely adopted the Internet for static Web sites, for email, and for exchanging electronic documents, including CAD drawings. Although neither haste nor large investment are called for, the study recommends that SJSMs take measured steps toward truly integrated ESCC and concludes that skills in ESCC will be necessary for SJSMs to protect their competitive advantages within the next four to eight years.
