Learning XML Erik T. Ray, 2003-09-22 This second edition of the bestselling *Learning XML* provides web developers with a concise but grounded understanding of XML (the Extensible Markup Language) and its potential-- not just a whirlwind tour of XML. The author explains the important and relevant XML technologies and their capabilities clearly and succinctly with plenty of real-life projects and useful examples. He outlines the elements of markup--demystifying concepts such as attributes, entities, and namespaces--and provides enough depth and examples to get started. *Learning XML* is a reliable source for anyone who needs to know XML, but doesn't want to waste time wading through hundreds of web sites or 800 pages of bloated text. For writers producing XML documents, this book clarifies files and the process of creating them with the appropriate structure and format. Designers will learn what parts of XML are most helpful to their team and will get started on creating Document Type Definitions. For programmers, the book makes syntax and structures clear. *Learning XML* also discusses the stylesheets needed for viewing documents in the next generation of browsers, databases, and other devices. *Learning XML* illustrates the core XML concepts and language syntax, in addition to important related tools such as the CSS and XSL styling languages and the XLink and XPointer specifications for creating rich link structures. It includes information about three schema languages for validation: W3C Schema, Schematron, and RELAX-NG, which are gaining widespread support from people who need to validate documents but aren't satisfied with DTDs. Also new in this edition is a chapter on XSL-FO, a powerful formatting language for XML. If you need to wade through the acronym soup of XML and start to really use this powerful tool, *Learning XML*, will give you the roadmap you need.

MindXpres: Conceptual and Technical Foundations for Next Generation Presentation Solutions Reinout Roels, 2019-05-27

Presentation tools such as PowerPoint were initially created to simulate physical slides and have inherited a lot of their limitations. In this dissertation we identify the shortcomings and unmet user needs in presentation software by means of literature study, observations, a survey and the programmatic analysis of over 12000 PowerPoint documents. The results indicate that user needs are slowly evolving while existing software has hardly changed over the last 30 years. We motivate the need to rethink the concept of a presentation and we provide conceptual and technical foundations that can enable interoperable and well-integrated solutions for the identified shortcomings. The resulting MindXpres platform consists of a new conceptual framework, content model, information system and presentation engine. We present MindXpres as a presentation platform that enables researchers and developers to build innovative presentation solutions that cannot be implemented in the existing tools. We further demonstrate the flexibility of the MindXpres platform by discussing a wide range of proof-of-concept plug-in solutions for the identified shortcomings and unmet user needs.
