U.S. Army Engineer School

US Combat Engineer 1941–45 Gordon L. Rottman, 2012-06-20 At its peak in World War II, the United States Army contained over 700 engineer battalions, along with numerous independent brigades and regiments. The specialized soldiers of the Engineers were tasked with a wide variety of crucially important tasks including river bridging, camouflage, airfield construction, and water and petroleum supply. However, despite their important support roles, the engineers were often employed on the front lines fighting beside the general infantry in the desperate battles of the European theatre. This book covers the role of these soldiers, from their recruitment and training, through their various support missions and combat experiences, forming an account of what it was truly like to be a combat engineer in World War II.

Combat Engineer, Pacific Theater Jay Divine, 2016-05-20 Combat Engineer, Pacific Theater looks at the daily lives of ordinary young men who found themselves with a unique job to do at an extraordinary time

and place in history. It tells the mostly untold story of the army's combat engineering battalions in the Pacific in World War II. As their name implies, the role of these soldiers was unique. They were trained both in construction and in combat, and were called upon to do both. With every step of the way contested, their job was to build an infrastructure for crossing the world's biggest ocean, to take the fight to an implacable enemy where he lived. The focus is the experiences of the men in the ranks of the Thirty-Fourth Engineer Combat Battalion. Part of the Army's Twenty-Seventh Infantry Division, the battalion participated in two of the three largest and bloodiest amphibious assaults in military history, those of Saipan and Okinawa.

Combat Engineers of World War II U S Army Command and General Staff Coll,U. S. Army U.S. Army Command and Staff College,2015-04-07 United States Army combat engineers were not properly trained to conduct their mission during World War II. Research of combat engineer training and operations during the interwar period and subsequently in the Pacific, North African, and European theaters revealed the extraordinary efforts required both to train new engineers and to develop selectees into capable combat engineer units. This research demonstrates that significant reductions to military personnel levels and readiness during the interwar period required a hasty fielding of forces in wartime that were not trained to previously established standards. Wartime engineer units consisted of soldiers who did not meet prerequisites for entry into the branch. These factors resulted in officers who were not prepared to lead combat engineer operations and soldiers who lacked basic engineering skills to efficiently conduct their

missions. Shortfalls in selection and training often necessitated remedial training in the theaters of operation.

A Combat Engineer with Patton's Army Lois Lembo, Leon Reed, 2020-06-09 “An engaging and often frightening story” of a member of the 305th Engineering Battalion of the 80th Infantry Division (Andrew Z. Adkins III, coauthor of *You Can't Get Much Closer Than This*). A Combat Engineer with Patton's Army is the untold story of Frank Lembo, one of George Patton's men who helped move the American command in the battle of Argentan in the Normandy Campaign, in the high-speed pursuit of the German Wehrmacht eastward across France, and in the brutal battles waged during the Battle of the Bulge and during the final combats along the borders of the collapsing Reich. Throughout his time in Europe, Lembo maintained a running commentary of his experiences with Betty Craig, his fiancée and future wife. This extensive correspondence provides a unique eyewitness view of the life and work of a combat engineer under wartime conditions. As a squad (and later platoon) leader, Frank and his comrades cleared mines, conducted reconnaissance behind enemy lines, built bridges, and performed other tasks necessary to support the movement of the 317th, 318th, and 319th Infantry Regiments of the Blue Ridge Division—Patton's workhorses, if not his glamour boys. Frank's letters go beyond his direct combat experiences to include the camaraderie among the GIs, living conditions, weather, and the hijinks that helped keep the constant threat of death at bay. His letters also worked to reassure Betty with hopeful dreams for their future together. Including dozens of previously unpublished photographs, *A Combat Engineer with Patton's Army* offers the rare perspective of what day-to-day warfare at the ground-level looked like in the European Theater through the eyes of one of the men spearheading the advance.

Combat Engineer John Racoosin,2021-04-05 In his service along the Mexican border and in both world wars, Colonel H. Wallis Anderson, Army Corps of Engineers, commanded troops in the most critical actions of his generation. This tribute to an unsung American hero weaves through Anderson's life as a Pennsylvania railroad engineer and as an Army combat engineer. Throughout, he endures tragedy and triumph as a shining example of the uniquely American concept of a citizen-soldier. *Combat Engineer* tells the well-known stories of the Bulge and Remagen from a new and different perspective, that of the commander. In both desperate actions, the senior engineer officer provides the steadying hand that inspires the troops to succeed. The story might seem fit for Hollywood, but no fictional account can compare to the real-life drama of *Combat Engineer*.

US Army Combat Engineer Vehicles Jeffrey DeRosa,2021-11-28 The struggle for armored dominance sometimes overshadows the vital and unsung heroes of the battlefield: the engineers. *Combat engineer*

vehicles spearhead armored attacks, breach obstacles, and prepare defenses. Born of necessity, these amazing vehicles have developed from humble beginnings to technological and mechanical marvels. After a slow and unimaginative start, the US Army has developed and fielded some of the most prolific and advanced combat engineer vehicles ever used. This book provides a rare look at these amazing machines and the crews that operated them. Vehicles covered are the M728 Combat Engineer Vehicle; Armored Vehicle Launched Bridge; M9 Armored Combat Earthmover; M9 ACE and M60 AVLB; M1132 Stryker Engineer Squad Vehicle; M2 Bradley, Wolverine, and Assault Breaching Vehicle; and Grizzly and Panther 2, as well as experimental and limited-use vehicles. Along with providing technical information, author Jeffrey DeRosa analyzes the operational effectiveness of each vehicle.

1111th Engineer Group In The Bulge: The Role Of Engineers As Infantry In Airland Battle Major Francis M. Cain III, 2014-08-15 This study examines the role of U.S. Army Engineers fighting as infantry in AirLand Battle by analyzing the actions of the 1111th Engineer Combat Group during the Battle of the Bulge in Dec. 1944. By manning hasty defensive positions at Malmedy, Stavelot, and Trois Ponts, the 291st Engineers and C Company, 51st Engineers delayed the German advance long enough for 30th Infantry and 82d Airborne Divisions to reach the area and wrestle the initiative from Sixth Panzer Army. The defense of the Ourthe River line by elements of the 51st Engineers was instrumental in delaying 116th Panzer Division long enough for 3rd Armored and 84th Infantry Divisions to reach defensive positions in front of the Meuse River. Engineers were successful as infantry against mechanized forces for several reasons: 1) Infantry missions were limited in scope; 2) They were augmented with additional fire power; 3) They

occupied good defensible terrain; 4) World War II engineer units received extensive combat training before deploying overseas. The Battle of the Bulge displays many of the characteristics of a Soviet attack on NATO. Like the Ardennes in Dec. 1944, NATO's Central Front is held by units which are overextended, untested in combat, and locked into a rigid forward defense with limited tactical reserves and no operational reserves. Under these circumstances, if Soviet forces do penetrate the Main Battle Area, engineer units are likely to be committed as infantry to block or contain the penetration. Like the Battle of the Bulge, we can expect a non-linear battlefield with fragmented, isolated units-a battlefield dominated by confusion and uncertainty. It is in exactly this type of situation that the actions of a few brave, determined men can make the difference between victory and defeat. By manning small, isolated defensive positions, the men of the 1111th Engineer Group provided the extra measure of combat power that tipped the scales of victory in favor of the Allies in Dec. 1944.
