The Complete Guide to the Hazardous Waste Regulations Travis P. Wagner, 1999-02-04 A very well-written handbook. --Ground Water (on the Second Edition) Presented in a very readable and understandable format. --The Hazardous Waste Consultant (on the Second Edition) The foremost in-depth survey of federal hazardous waste regulations in the United States--now in a new edition The Complete Guide to the Hazardous Waste Regulations is a proven source of clear information on a regulatory system that many find frustratingly complex. Now updated to include additional compliance checklists, Internet resources, and more, this Third Edition provides vital information on all aspects of hazardous materials, from proper on-site management and transportation to appropriate off-site management and cleanup. Author Travis Wagner, one of the nation's leading experts on the subject, provides a step-by-step approach to compliance that goes beyond summarization to help industry professionals truly understand regulations and how they relate to real-world situations. Complete with dozens of user-friendly checklists, flow charts, text boxes, and tables, this indispensable resource includes: * Information on EPA interpretations of regulations not included in other handbooks * Clear explanations of many state-level hazardous waste requirements * A new chapter on spill reporting, giving a step-by-step explanation with attention to multiple federal laws * An appendix listing the Superfund and EPCRA reportable quantity for each RCRA hazardous waste * Additional appendices covering RCRA hazardous wastes, hazardous constituents, groundwater monitoring constituents, permit modification classifications, additional information sources, and important acronyms

Environmental Cleanup at Navy Facilities Committee on Environmental Remediation at Naval Facilities, Commission on Geosciences, Environment and Resources, Division on Earth and Life Studies, National Research Council, 1999-04-01 The fiscal and technological limitations associated with cleaning up hazardous waste sites to background conditions have prompted responsible parties to turn to risk-based methods for environmental remediation. Environmental Cleanup at Navy Facilities reviews and critiques risk-based methods, including those developed by the U.S. Environmental Protection Agency and the American Society of Testing and Materials. These critiques lead to the identification of eleven criteria that must be part of any risk-based methodology adopted by the Navy, a responsible party with a large number of complex and heavily contaminated waste sites. Military Base Closures: Opportunities Exist to Improve Environmental Cleanup Cost Reporting & to Expedite Transfer of Unneeded Property, 2007 While expected environmental cleanup costs for unneeded property arising from the 2005 BRAC round are not yet fully known, Department of Defense (DOD) data indicate that about \$950 million will be needed to clean up these bases, adding to the estimated \$13.2 billion total cleanup cost for the prior rounds. Although DOD's cleanup program has matured compared to prior BRAC rounds, there are still many unknowns and the cleanup estimate for the 2005 round should be considered preliminary. In fact, environmental cleanup costs are likely to increase as more intensive environmental investigations are undertaken, additional hazardous conditions are discovered, and future reuse plans are finalized. Furthermore, Congress does not have full visibility over the total cost of DOD's BRAC cleanup efforts because none of the four reports DOD prepares on various aspects of environmental cleanup present all types of costs past and future to complete cleanup at each base. Compiling a complete picture of all costs requires extracting information from multiple reports, as GAO has done to estimate the total cleanup cost for the four prior BRAC rounds. More complete and transparent cost information would assist Congress in conducting its oversight responsibilities for this multibillion dollar effort.

Superfund Cleanups, 1994 Discusses EPA's efforts to conduct cleanups of hazardous waste sites. Focuses on the type & extent of actions taken at those sites where remedy construction is complete & at sites deleted from the SUPERFUND priority list. Also evaluates the challenges EPA will face in managing & monitoring these sites. 20 charts & tables.

Strategies for Accelerating Cleanup at Toxic Waste Sites Scott Marshall Payne, 1997-12-29 Accelerating Cleanup at Toxic Waste Sites: Fast-tracking Environmental Actions and Decision

Making presents truly innovative advances in investigative and cleanup technologies, offering valuable solutions that streamline the data collection process, speed up the time it takes to characterize a site, and expedite decision making. Using easy to understand graphic displays, tables, text summaries, and real world case studies, and by synthesizing technical and regulatory reference information crucial to the development of effective cleanup strategies, this book provides the framework for environmental professionals to develop project and program approaches that meet today's needs. An advanced text for those with at least basic understanding of environmental investigation, cleanup, regulations, decision making, and policy development, *Accelerating Cleanup at Toxic Waste Sites* addresses the human side of the environmental industry and why it is perhaps one of the most important considerations for successful accelerated cleanup. This book takes the next step by providing managers, project teams, and other professionals with approaches that bring techniques, regulations, strategies, and people together into one comprehensive package that works.

Best Practices in Data Cleaning Jason W. Osborne, 2013 Many researchers jump straight from data collection to data analysis without realizing how analyses and hypothesis tests can go profoundly wrong without clean data. This book provides a clear, step-by-step process of examining and cleaning data in order to decrease error rates and increase both the power and replicability of results. Jason W. Osborne, author of *Best Practices in Quantitative Methods* (SAGE, 2008) provides easily-implemented suggestions that are research-based and will motivate change in practice by empirically demonstrating, for each topic, the benefits of following best practices and the potential consequences of not following these guidelines. If your goal is to do the best research you can do, draw conclusions that are most likely to be accurate representations of the population(s) you wish to speak about, and report results that are most likely to be replicated by other researchers, then this basic guidebook will be indispensable.

Superfund John B. Stephenson,2011-02 In the 1990s, creosote was discovered under a residential neighborhood in Manville, NJ. Creosote, a mixture of chemicals, is used to preserve wood products. Creosote may cause cancer. Creosote from a former wood-treatment facility had contaminated soil and groundwater at the site. EPA worked with the Army Corps of Engineers to clean up the site. As of May 2009, total site costs were almost \$340 million and remedial construction costs had exceeded original estimates. This report examined: (1) how EPA assessed risks and selected remedies for the site; (2) what factors contributed to the difference between the estimated and actual costs; and (3) how EPA and the Corps divided responsibilities for site work. This is a print on demand report.
