The Politics of Global Competitiveness Paul

Cammack, 2022 This book documents the recent developments of what Marx called the 'general law of social production', and the leading roles of the Organisation for Economic Cooperation and Development and the World Bank as advocates of a single global model of capitalist development. Marx's 'general law of social production', proposed in *Capital* (1867), suggests that as the capitalist system of production becomes global, and competition between capitalists becomes more intense, workers are compelled to be versatile (multi-skilled), flexible, and mobile in order to survive. This general law, resulting from scientific and technological innovation and continuous advances in the division of labour generated by competition between capitalists, has given rise to global production chains, 'zero hours' contracts, and the breaking down of production processes into smaller and smaller individual steps, increasingly supported by advanced machines and digital platforms. This book identifies the universal policy framework that promotes these developments as the politics of global competitiveness, and shows that the Washington-based World Bank and the Paris-based Organisation for Economic Cooperation and Development (OECD), working together, are its principal advocates. They do not narrowly promote the interests of the advanced capitalist economies, or the 'West' and its transnational corporations, but rather the unlimited development of the global capitalist system and the world market as a whole. When their policies are examined together and compared, they reveal a single, shared programme, focused not on the relationship between the developed and the developing world, but on the global relationship between capital and labour. Put at its simplest, their aim is to ensure that as many people as possible across the world have the potential to be productive workers, and to propose reforms to welfare or social protection that will oblige them to offer themselves to capitalists for work.

Hot Wired Style Jeffrey Veen,1997 The web has its own language, aesthetics, issues, and problems; yet the infrastructure and rules of web site design are still in their infancy. Here, the author discusses how Web designers should collaborate with editors and engineers, have an acute understanding of the concept of real-time, master hypertext, know their audience, be wary of multimedia, and create sites that emphasize simplicity and clarity and that users can move through quickly. Includes numerous color reproductions of web pages. Annotation copyrighted by Book News, Inc., Portland, OR

Managing Quality Fads Robert E. Cole,1999 A longtime student of the Japanese and American quality movements, Cole focuses on the response of American industry to the challenge posed in the early 1980s by high quality goods from Japan. While most American managers view this challenge as slowly but successfully met, many academics see the quality movement that emerged from it as just another fad. In seeking to reconcile these two views, Cole explores the reasons behind American industry's slow response to Japanese quality, arguing that a variety of institutional factors inhibited management action in the early 1980s. He then describes the reshaping of institutions that allowed American companies to close the quality gap and to achieve sustained quality improvements in the 1990s.

The New International Division of Labour Guido Starosta,2016-06-02 This book revisits the debate over the new

international division of labour (NIDL) that dominated discussions in international political economy and development studies until the early 1990s. It submits that a revised NIDL thesis can shed light on the specificities of capitalist development in various parts of the world today. Taken together, the contributions amount to a novel value-theoretical approach to understanding the NIDL. This rests upon the distinction between the global economic content that determines the constitution and dynamics of the NIDL and the evolving national political forms that mediate its development. More specifically, the authors argue that uneven development is an expression of the underlying essential unity of the production of relative surplus-value on a world scale. They substantiate and illustrate this argument through several international case studies, including Argentina, Brazil, Ecuador, Ireland, South Korea, Spain and Venezuela.
