**File Management Made Simple, Windows Edition** Joseph Moran,2015-11-24 Managing data is an essential skill that every PC user should have. Surprisingly though, a large number of users--even highly experienced users--exhibit poor file management skills, resulting in frustration and lost data. This brief but invaluable book, File Management Made Simple can resolve this by providing you with the skills and best practices needed for creating, managing and protecting your data. Do any of the following scenarios sound familiar to you? You've downloaded an attachment from your e-mail, but aren't sure where you downloaded it to. You spent an entire evening working on a document only to discover the next morning that you didn't save it to your flash drive like you thought you had? Maybe you had a guest visiting and wanted to share with them the pictures you took of your kids recital, yet when you went to get them you were unable to recall where you stored them on your PC. Or you scanned your receipts for your expense reports on day and came back the next day and scanned some for another report only to find that the new ones numbered Scan 1, Scan 2,... still exist. Unfortunately, for a vast number of PC users, scenarios like these are all too common. These situations are not only extremely frustrating for the user, but also tend to discourage them from ever wanting to touch a PC again! Why is that? What is the common factor? It's simple really. Each of these issues can be attributed to poor file management skills. In my experience, the people with the worst file management skills are simply the ones that lack an understanding of how to navigate the Windows operating system. However this situation can be easily rectified. And once you can successfully navigate your computer's drive and folder structure, you'll be hard pressed to misplace anything. Although this process can seem daunting to the uninitiated, this isn't black magic. In fact, it's actually quite simple. Keeping your files and folders organized on the computer is no more difficult than keeping them organized in real life. There is a place for everything and everything has its place. We will show you how to navigate Windows correctly and efficiently. Where specific types of files should be stored. We'll also show you how best to name and manage your files; such as using descriptive folders to identify files, implementing the best naming conventions for files and directories, and how to group various types of data together; ensuring that the data you need is always readily available. Finally we'll introduce you to some of the best options for transporting and protecting your data. We will show you the skills you need to easily manage your data, using clear and simple English, without the confusing technical jargon. All this and more can be accomplished with File Management Made Simple by your side.

**Easy and Secure Real Time File Sharing System** Meenu M.,Dhawaleswar Rao C. H.,2012-08 In a nutshell this was an attempt to develop a system, which would be more efficient than the existing system in The Exams for whom this project is meant. Afterwards, we come on the feasibility study of the proposed system. That is we considered how far our system is feasible in the different terms likewise the economic feasibility, the behavioral feasibility, technical feasibility as well as management and social feasibility. Then we analyzed whole system whether it was existing system or the proposed one. That is we considered all the problems of the existing system and all those benefits of proposed system, which will overcome the earlier system's pitfalls. Then we finally reached the most important phase in the system development i.e. he design phase. Here we first designed through the flow charts and DFD's. Then we designed the system using the software tools proposed in our project. It will be designed to offer easy accessible to all records to provide better maintainability and to enable the user to make the required modification as and when necessary. Execution of this project would enable the user to seek use and manipulation the records pertaining to every client.
