Eva's Story Eva Schloss,2012-06-07 In March 1938 the Germans invaded Austria and young Eva Geiringer and her family became refugees. Like many Jews they fled to Amsterdam where they hid from the Nazis until they were betrayed and arrested in May 1944. Eva was fifteen years old when she was sent to Auschwitz - the same age as her friend Anne Frank. Together with her mother she endured the daily degradation that robbed so many of their lives - including her father and brother. After the war her mother married Otto Frank, the only surviving member of the Frank family. Only after forty years was Eva able to tell her story. . .

Gabriel's Inferno Sylvain Reynard,2012-07-31 From New York Times bestselling author Sylvain Reynard comes the first novel in the Gabriel's Inferno series, a haunting, unforgettable tale of one man's salvation and one woman's sensual awakening—NOW A FILM FROM PASSIONFLIX! Enigmatic and sexy, Professor Gabriel Emerson is a well-respected Dante specialist by day, but by night he devotes himself to an uninhibited life of pleasure. He uses his notorious good looks and sophisticated charm to gratify his every whim, but is secretly tortured by his dark past and consumed by the profound belief that he is beyond all hope of redemption. When the sweet and innocent Julia Mitchell enrolls as his graduate student, his attraction and mysterious connection to her not only jeopardizes his career, but sends him on a journey in which his past and his present collide. An intriguing and sinful exploration of seduction, forbidden love, and redemption, Gabriel's Inferno is a captivating and wildly passionate tale of one man's escape from his own personal hell as he tries to earn the impossible—forgiveness and love.

Advancing Geographic Information Science: The Past and Next Twenty Years Harlan Onsrud,Werner Kuhn,2016-02-22 This book is the result of invited and competitive submissions to a 2015 academic institute on Advancing Geographic Information Science: The Past and Next Twenty Years. A core goal of the institute was to review the research challenges of the past twenty years and discuss emerging challenges of the next twenty.

Gabriel's Redemption Sylvain Reynard,2013-12-03 The New York Times bestselling Gabriel's Inferno series reaches new heights as Gabriel and Julia's relationship is challenged by past secrets and present foes in this captivating novel—SOON TO BE A FILM FROM PASSIONFLIX! Professor Gabriel Emerson has left his position at the University of Toronto to embark on a new life with his beloved Julia. Together, he's confident that they can face any challenge. And he's eager to become a father. But Julia's graduate program threatens Gabriel's plans, as the pressures of being a student become all consuming. When she is given the honor of presenting an academic lecture at Oxford, Gabriel is forced to confront Julia about the subject of her presentation—research that conflicts with his own. And in Oxford, several individuals from their past appear, including an old nemesis intent on humiliating Julia and exposing one of Gabriel's darkest secrets. In an effort to confront his remaining demons, Gabriel begins a quest to discover more about his biological parents, beginning a chain of events that has startling repercussions for himself, Julianne, and his hope of having a family.

Gabriel's Promise Sylvain Reynard,2020-01-07 New York Times bestselling author Sylvain Reynard returns with the fourth installment of the beloved Gabriel's Inferno series. When Gabriel and Julia Emerson first lay eyes on their newborn daughter, Clare, they realize life as they know it will never be the same. Gabriel has vowed to be a good father when he suddenly receives an invitation to give a series of lectures in Edinburgh, Scotland-- an opportunity of high prestige—but that would mean leaving his wife and child in Boston. Hesitant to bring it up, he keeps the opportunity from Julia as long as he can, not knowing she has a secret of her own. When a frightening situation arises that threatens their new family, both parents must make sacrifices. With the family in danger, the looming question

remains: Will Gabriel pursue his lectureship in Edinburgh, leaving Julia and Clare vulnerable in Boston, or will he abandon the chance of a lifetime in order to ensure his family's safety?

Cognitive and Linguistic Aspects of Geographic Space Martin Raubal,David M Mark,Andrew U. Frank,2013-01-30 20 years ago, from July 8 to 20, 1990, 60 researchers gathered for two weeks at Castillo-Palacio Magalia in Las Navas del Marques (Avila Province, Spain) to discuss cognitive and linguistic aspects of geographic space. This meeting was the start of successful research on cognitive issues in geographic information science, produced an edited book (D. M. Mark and A. U. Frank, Eds., 1991, Cognitive and Linguistic Aspects of Geographic Space. NATO ASI Series D: Behavioural and Social Sciences 63. Kluwer, Dordrecht/Boston/London), and led to a biannual conference (COSIT), a refereed journal (Spatial Cognition and Computation), and a substantial and still growing research community. It appeared worthwhile to assess the achievements and to reconsider the research challenges twenty years later. What has changed in the age of computational ontologies and cyber-infrastructures? Consider that 1990 the web was only about to emerge and the very first laptops had just appeared! The 2010 meeting brought together many of the original participants, but was also open to others, and invited contributions from all who are researching these topics. Early-career scientists, engineers, and humanists working at the intersection of cognitive science and geographic information science were invited to help with the re-assessment of research needs and approaches. The meeting was very successful and compared the research agenda laid out in the 1990 book with achievements over the past twenty years and then turned to the future: What are the challenges today? What are worthwhile goals for basic research? What can be achieved in the next 20 years? What are the lessons learned? This edited book will assess the current state of the field through chapters by participants in the 1990 and 2010 meetings and will also document an interdisciplinary research agenda for the future.

Spatial Information Theory Andrew U. Frank,Werner Kuhn,1995-09-13 This book constitutes the refereed proceedings of the International Conference on Spatial Information Theory, COSIT'95, held near Vienna, Austria, in September 1995. Spatial Information Theory brings together three fields of research of paramount importance for geographic information systems technology, namely spatial reasoning, representation of space, and human understanding of space. The book contains 36 fully revised papers selected from a total of 78 submissions and gives a comprehensive state-of-the-art report on this exciting multidisciplinary - and highly interdisciplinary - area of research and development.

Geographic Information Research Massimo Craglia,H Onsrud,2004-01-14 Geographic Information Research is a broad discipline, and is being actively pursued world-wide. A group of researchers in both North America and Europe have come together as contributors to this volume as a way of combining their expertise. The emphasis is on matters of political, strategic and organizational importance, rather than on technology or systems, and covers the theory and social and political practice which goes hand-in-hand with GIS.

GeoSensor Networks Silvia Nittel,Alexandros Labrinidis,Anthony Stefanidis,2008-08-15 This volume serves as the post-conference proceedings for the Second GeoSensor Networks Conference that was held in Boston, Massachusetts in October 2006. The conference addressed issues related to the collection, management, processing, ana- sis, and delivery of real-time geospatial data using distributed geosensor networks. This represents an evolution of the traditional static and centralized geocomputational paradigm, to support the collection of both temporally and spatially high-resolution, up-to-date data over a broad geographic area, and to use sensor networks as actuators in geographic space. Sensors in these environments can be static or mobile, and can be used to passively collect information about the environment or, eventually, to actively influence

it. The research challenges behind this novel paradigm extend the frontiers of tra- tional GIS research further into computer science, addressing issues like data stream processing, mobile computing, location-based services, temporal-spatial queries over geosensor networks, adaptable middleware, sensor data integration and mining, au- mated updating of geospatial databases, VR modeling, and computer vision. In order to address these topics, the GSN 2006 conference brought together leading experts in these fields, and provided a three-day forum to present papers and exchange ideas.

Uncertainty in Geographical Information Jingxiong Zhang,Michael F. Goodchild,2002-03-29 As Geographic Information Systems (GIS) have developed and their applications have been extended, the issue of uncertainty has become increasingly recognized. It is highlighted by the need to demystify the inherently complex geographical world to facilitate computerization in GIS, by the inaccuracies that emerge from man-machine interactions in dat

Geographic Information Research Massimo Craglia,H. Couclelis,1997-01-28 The contributors to this edited collection demonstrate that geographic information research is truly global in character, cutting across a wide range of disciplines and addressing conceptual, methodological, technical, ethical and political issues alike. Of the six themes, two are broadly concerned with data integration (geographic data infrastructures, GIS diffusion and implementation); two are more technical and conceptual in nature (generalisation, concepts and paradigms), and two reflect to a larger extent the application-driven nature of GIS technology (spatial analysis and multimedia). Each section is introduced by chapters highlighting the key research issues. Further chapters explore these issues in greater depth, and benefit from the international collaboration. Through the comparison of results included in this book, the prospects for advancing the field and addressing the challenges of GIS research are greatly improved.

Spatial Databases Philippe Rigaux,Michel Scholl,Agnès Voisard,2002 The authors explore and explain current techniques for handling the specialised data that describes geographical phenomena in a study that will be of great value to computer scientists and geographers working with spatial databases.

The Cognition of Geographic Space Rob Kitchin,Marc Blades,2002 This engaging book looks at how humans think and behave in geographic space. The authors analyze what people know about spatial geographical relationships, and how this knowledge is used in everyday life. They synthesize a variety of perspectives from various disciplines, providing a critical appraisal of geographic space. In doing so, the authors put forth new ideas and theories concerning cognitive mapping, and outline an agenda for future research.

A Research Agenda for Geographic Information Science Robert B. McMaster,E. Lynn Usery,2004-08-30 A close relationship exists between GIS and numerous applications, including cartography, photogrammetry, geodesy, surveying, computer and information science, and statistics, among others. Scientists coined the term geographic information science (GIScience) to describe the theory behind these fields. A Research Agenda for Geographic Information Science extensively details the issues and fundamental scientific problems that must be solved if the use of GIS in these and other fields is to advance. Immediately following the founding of the University Consortium for Geographic Information Science (UCGIS), the group identified in a Research Agenda the topics that represented major challenges to the GIS research community. The first chapter of this book delivers an introduction to the agenda and to the collective guidance that the agenda provides to researchers. Chapters 2-10 discuss nine original research challenges. Chapters 11-14 provide the basis of the agenda's four Emerging Themes. Each chapter, written by researchers involved in the conception of the topics, discusses basic research elements, the UCGIS approach, the need for the National research agenda, contributions to knowledge

and society, and offers a complete set of references. The final section draws general conclusions about the UCGIS approach and the defined research challenges.

GIS Algorithms Ningchuan Xiao,2015-11-09 Geographic information systems (GIS) have become increasingly important in helping us understand complex social, economic, and natural dynamics where spatial components play a key role. The critical algorithms used in GIS, however, are notoriously difficult to both teach and understand, in part due to the lack of a coherent representation. GIS Algorithms attempts to address this problem by combining rigorous formal language with example case studies and student exercises. Using Python code throughout, Xiao breaks the subject down into three fundamental areas: Geometric Algorithms Spatial Indexing Spatial Analysis and Modelling With its comprehensive coverage of the many algorithms involved, GIS Algorithms is a key new textbook in this complex and critical area of geography.

Principles of Knowledge Representation and Reasoning Bernhard Nebel,Charles Rich,William R. Swartout,1992 Stringently reviewed papers presented at the October 1992 meeting held in Cambridge, Mass., address such topics as nonmonotonic logic; taxonomic logic; specialized algorithms for temporal, spatial, and numerical reasoning; and knowledge representation issues in planning, diagnosis, and natural langu
