Learning SQL on SQL Server 2005 Sikha Saha Bagui,Richard Walsh Earp,2006-04-26 Anyone who interacts with today's modern databases needs to know SQL (Structured Query Language), the standard language for generating, manipulating, and retrieving database information. In recent years, the dramatic rise in the popularity of relational databases and multi-user databases has fueled a healthy demand for application developers and others who can write SQL code efficiently and correctly. If you're new to databases, or need a SQL refresher, Learning SQL on SQL Server 2005 is an ideal step-by-step introduction to this database query tool, with everything you need for programming SQL using Microsoft's SQL Server 2005-one of the most powerful and popular database engines used today. Plenty of books explain database theory. This guide lets you apply the theory as you learn SQL. You don't need prior database knowledge, or even prior computer knowledge. Based on a popular university-level course designed by authors Sikha Saha Bagui and Richard Walsh Earp, Learning SQL on SQL Server 2005 starts with very simple SQL concepts, and slowly builds into more

complex query development. Every topic, concept, and idea comes with examples of code and output, along with exercises to help you gain proficiency in SQL and SQL Server 2005. With this book, you'll learn: Beginning SQL commands, such as how and where to type an SQL query, and how to create, populate, alter and delete tables How to customize SQL Server 2005's settings and about SQL Server 2005's functions About joins, a common database mechanism for combining tables Query development, the use of views and other derived structures, and simple set operations Subqueries, aggregate functions and correlated subqueries, as well as indexes and constraints that can be added to tables in SQL Server 2005 Whether you're an undergraduate computer science or MIS student, a self-learner who has access to the new Microsoft database, or work for your company's IT department, Learning SQL on SQL Server 2005 will get you up to speed on SQL in no time.

SQL Database Reporting Simon Smart,2019-11-11 If you're a beginner and want to learn practical SQL reporting skills in the shortest time possible, this is the course for you. The course's examples use free software, meaning you don't need to make any additional purchases. To follow the course's examples, you will need a Windows computer. Unlike many other courses, this book works entirely with practical examples. You won't be slowed down by long explanations of database theory and instead will get started doing useful work immediately and will be able to begin creating reports from SQL databases after just a few lessons. Almost any modern organization can benefit from a staff member who knows how to generate database reports using the SQL language, but SQL is a rare skill among most office staff. Part of the reason that few people have SQL skills is that most related

courses try to teach every aspect of database theory, including database design and server administration. This course is different. It focuses entirely on database reporting and won't slow you down by trying to teach skills that you don't need. This course also focuses on skills that will be useful on many different types of database rather than teaching obscure commands that will only work on a certain type of database. Course Outline Lesson 1: Install SQL Server Express Lesson 2: Connect to SQL Server Lesson 3: Install the sample database Lesson 4: Explore a database Lesson 5: Write your first database query Lesson 6: Understand the SELECT statement and save a query Lesson 7: Sort with ORDER BY and export query results Lesson 8: Use the TOP and DISTINCT keywords Lesson 9: Filter results with WHERE Lesson 10: Use the LIKE keyword for inexact filters Lesson 11: Use simple mathematical operators and custom column names Lesson 12: Concatenate text and numbers Lesson 13: Understand dates and use the CONVERT function Lesson 14: Use logical operators and filter by date Lesson 15: Use aggregate functions and GROUP BY Lesson 16: Work with NULL values and the IN keyword Lesson 17: Use the HAVING statement to filter aggregate results Lesson 18: Use date

functions Lesson 19: Work with text functions Lesson 20: Understand relationships Lesson 21: Use inner joins to extract data from multiple tables Lesson 22: Use outer joins Lesson 23: Use full joins Lesson 24: Use cross joins Lesson 25: Use the CASE function Lesson 26: Work with subqueries Lesson 27: Use IN and EXISTS Lesson 28: Use UNION to append the results of multiple queries together Lesson 29: Create a View Lesson 30: Analyze and optimize a query
