**Watching the Internet** José M. Alvarez-Monzoncillo, 2022-03-03 This book deals with the Internet's influence on television. The traditional value chain has been transformed, giving rise to new forms of television that foster user generated content. We no longer dream about interactivity, but participation. Accordingly, the "digital natives" like to tag programs and films in the cyberspace, each conveniently tagged so that other users can find it. Although many questions have yet to be answered, this decade's motto may be "the tag is the medium". However, on-demand television is unlikely to replace mass TV. The Web 2.0 has brought an end to the "my TV" concept of the dotcom age and may put "our TV" in its place. These changes pose serious problems. The industry is facing the real threat of revenue cannibalization because current online business models are not financially rewarding. The Internet is not yet a profitable market for programs that require additional revenues to advertising. To date, the box office, video and premium television have been the main sources of revenue of the audiovisual industry. This book explores the factors at play in this shift.

*Internet Television* Eli M. Noam, Jo Groebel, Darcy Gerbarg, 2003-09-12 Internet TV is the quintessential digital convergence medium, linking television, telecommunications, the Internet, computer applications, games, and more. Soon, venturing beyond the convenience of viewer choice and control, Internet TV will enable and encourage new types of entertainment, education, and games that take advantage of the Internet's interactive capabilities. What Internet TV is today and can be in the future forms the context for this book. Arising from collaboration between the Columbia Institute for Tele-Information (CITI) and the European Institute for the Media (EIM), this volume investigates the advent of widely available individual broadband Internet communications and their impact on the development of Internet TV. Editors Eli Noam, Jo Groebel, and Darcy Gerbarg have collected seminal papers by leaders from the U.S. and European media and technology industries that offer a critical look at the impact of interactivity on television content, and address the need for media organizations to create interactive programming in this untapped realm with unclear consumer interest and desires. Each section of the volume fleshes out key issues and concepts of television and the Internet: \*Part I, Infrastructure Implications of Internet TV, discusses questions about the required network capacity for various quality grades to deliver individualized broadband to homes. \*Part II, Network Business Models and Strategies, addresses the business challenges of making Internet TV a financial success. \*Part III, Policy, examines policy issues, including copyright and regulation. \*Part IV, Content and Culture, reviews available content, those creating it, and how consumers view Internet TV content. \*Part V, Future Impacts, considers future global prospects for Internet TV content creation and distribution. Internet Television is an essential resource for professionals and scholars in new technology and media studies, media policy, telecommunication, broadcasting, and related areas. It is also appropriate for graduate seminars in telecommunications, media and new technologies, and broadcasting and the Internet.

**Online TV** Catherine Johnson,2019-01-04 With growth in access to high-speed broadband and 4G, and increased ownership of smartphones, tablets and internet-connected television sets, the internet has simultaneously begun to compete with and transform television. Online TV argues that these changes create the conditions for an emergent internet era that challenges the language and concepts that we have to talk about television as a medium. In a wide-ranging analysis, Catherine Johnson sets out a series of conceptual frameworks designed to provide a clearer language with which to analyse the changes to television in the internet era and to bring into focus the power dynamics of the online TV industry. From providing definitions of online TV and the online TV industry, to examining the ways in which technology, rights, interfaces and algorithms are used to control and constrain access to audiovisual content, Online TV is a timely intervention into debates about contemporary internet and television cultures. A must-read for any students, scholars and practitioners who want to understand and analyse the ways in which television is intertwining with and being transformed by the internet.
