*Housing Estates in Europe* Daniel Baldwin Hess,Tiit Tammaru,Maarten van Ham,2018-08-14 This open access book explores the formation and socio-spatial trajectories of large housing estates in Europe. Are these estates clustered or scattered? Which social groups originally had access to residential space in housing estates? What is the size, scale and geography of housing estates, their architectural and built environment composition, services and neighbourhood amenities, and metropolitan connectivity? How do housing estates contribute to the urban mosaic of neighborhoods by ethnic and socio-economic status? What types of policies and planning initiatives have been implemented in order to prevent the social downgrading of housing estates? The collection of chapters in this book addresses these questions from a new perspective previously unexplored in scholarly literature. The social aspects of housing estates are thoroughly investigated (including socio-demographic and economic characteristics of current and past inhabitants; ethnicity and segregation patterns; population dynamics; etc.), and the physical composition of housing estates is described in significant detail (including building materials; building form; architectural and landscape design; built environment characteristics; etc.). This book is timely because the recent global economic crisis and Europe's immigration crisis demand a thorough investigation of the role large housing estates play in poverty and ethnic concentration. Through case studies of housing estates in 14 European centers, the book also identifies policy measures that have been used to address challenges in housing estates throughout Europe.

**Autonomous Driving** Markus Maurer,J. Christian Gerdes,Barbara Lenz,Hermann Winner,2016-05-21 This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving."

**Semantic Systems. The Power of AI and Knowledge Graphs** Maribel Acosta,Philippe Cudré-Mauroux,Maria Maleshkova,Tassilo Pellegrini,Harald Sack,York Sure-Vetter,2019-11-04 This open access book constitutes the refereed proceedings of the 15th International Conference on Semantic Systems, SEMANTiCS 2019, held in Karlsruhe, Germany, in September 2019. The 20 full papers and 8 short papers presented in this volume were carefully reviewed and selected from 88 submissions. They cover topics such as: web semantics and linked (open) data; machine learning and deep learning techniques; semantic information management and knowledge integration; terminology, thesaurus and ontology management; data mining and knowledge discovery; semantics in blockchain and distributed ledger technologies.

**Women's Issues in Transportation** Susan Herbel,Danena Gaines,2010 September 27-30, 2009. Irvine, California--Title page.

*Knowledge Graphs* Aidan Hogan,Eva Blomqvist,Michael Cochez,Claudia d'Amato,Gerard de Melo,Claudio Gutierrez,Sabrina Kirrane,Jose Emilio Labra Gayo,Roberto Navigli,Sebastian Neumaier,Axel-Cyrille Ngonga Ngomo,Axel Polleres,Sabbir M. Rashid,Anisa Rula,Juan Sequeda,Lukas Schmelzeisen,Steffen Staab,Antoine Zimmermann,2021-11-08 This book provides a comprehensive and accessible introduction to knowledge graphs, which have recently garnered notable attention from both industry and academia. Knowledge graphs are founded on the principle of applying a graph-based abstraction to data, and are now broadly deployed in scenarios that require integrating and extracting value from multiple, diverse sources of data at large scale. The book defines knowledge graphs and provides a high-level overview of how they are used. It presents and contrasts popular graph models that are commonly used to represent data as graphs, and the languages by which they can be queried before describing how the resulting data graph can be enhanced with notions of schema, identity, and context. The book discusses how ontologies and rules can be used to encode knowledge as well as how inductive techniques—based on statistics, graph analytics, machine learning, etc.—can be used to encode and extract knowledge. It covers techniques for the creation, enrichment, assessment, and refinement of knowledge graphs and surveys recent open and enterprise knowledge graphs and the industries or applications within which they have been most widely adopted. The book closes by discussing the current limitations and future directions along which knowledge graphs are likely to evolve. This book is aimed at students, researchers, and practitioners who wish to learn more about knowledge graphs and how they facilitate extracting value from diverse data at large scale. To make the book accessible for newcomers, running examples and graphical notation are used throughout. Formal definitions and extensive references are also provided for those who opt to delve more deeply into specific topics.

**State Security and Mapping in the GDR** Dagmar Unverhau,2006 As of 1958, in the German Democratic Republic (GDR), the Ministry for State Security was responsible for classified material, including topographic maps, which were produced and published by the Administration for Surveying and Mapping in the Ministry of Internal Affairs and by the Military Topographic Service in the Ministry of National Defence. In order to make sure that topographic documents were handled, stored, safeguarded, and administered according to the GDR's security doctrine, the Ministry for State Security maintained its own 'Surveying' Line within Main Department VII (Counter-Intelligence in the Ministry of Internal Affairs / German People's Police). Following the Conference of the Geodetic Services of the Socialist States held in Moscow in 1965, the National Defence Council of the GDR adopted a resolution stating, among other things, that topographic maps in the uniform Co-ordinate System 42 were only allowed to be kept in the offices of the so-called 'armed organs' (the Ministry of National Defence, the Ministry for State Security, and the Ministry of Internal Affairs). Maps used by anyone else were to be recalled and replaced by an Edition for the National Economy (AV), from which the uniform sheet line, geodetic grids, trigonometric points, and quality and quantity details as well as other 'confidential information' had to be removed. Moreover, maps for the general public were to feature distortions of direction and scale, and inaccuracies of up to  $\pm 3$  km. The purpose of this collection is to illuminate both the Ministry for State Security's influence on mapping in the GDR and the ulterior motives behind its practices. Historians, cartographers, and geographers, including expert contemporary witnesses, explore these topics from a variety of viewpoints and provide archivists, map historians, and other map users with information helpful for evaluating and dealing with maps published in the former GDR.

*New Trends in Business Information Systems and Technology* Rolf Dornberger,2020-07-07 This book presents selected examples of digitalization in the age of digital change. It is divided into two sections: "Digital Innovation," which features new technologies that stimulate and enable new business opportunities; and "Digital Business Transformation," comprising business and management concepts that employ specific technological solutions for their practical implementation. Combining new insights from research, teaching and management, including digital transformation, e-business, knowledge representation, human-computer interaction, and business optimization, the book highlights the breadth of research as well as its meaningful and relevant transfer into practice. It is intended for academics seeking inspiration, as well as for leaders wanting to tap the potential of the latest trends to take society and their business to the next level.

*Smart Bioenergy* Daniela Thrän,2015-04-20 Biomass is a vital source of renewable energy, because it offers a wide range of established and potential methods for energy generation. It is also an important facet of the progression toward a sustainable energy future. The need for further development in the provision of bioenergy is underlined by challenges affecting the biomass resource base, including rising demand for biomass for food, feed, materials and fuel. This is underlined by significant concerns over factors relating to land, such as soil, nutrients and biodiversity. This book examines and analyzes Germany's decade-long initiative toward implementation of an active policy for the transition of the energy system to make greater use of renewable energy sources, which has resulted in a significant increase in the amount of biomass used for electricity, heat

and transport fuel. The book begins with a review of market and resource base issues and moves on to analyze the technical options for a more integrated bioenergy use. The analysis spans the entire bioenergy provision chain including solid, liquid and gaseous biofuels. A case study offers a detailed model of the effects of smart biomass energy on the German energy system. The book closes with a view of the most promising fields and an appraisal of needed elements for a successful transition.

**Socio-Economic Segregation in European Capital Cities** Tiit Tammaru, Maarten van Ham, Szymon Marcińczak, Sako Musterd, 2015-07-24 Growing inequalities in Europe are a major challenge threatening the sustainability of urban communities and the competitiveness of European cities. While the levels of socio-economic segregation in European cities are still modest compared to some parts of the world, the poor are increasingly concentrating spatially within capital cities across Europe. An overlooked area of research, this book offers a systematic and representative account of the spatial dimension of rising inequalities in Europe. This book provides rigorous comparative evidence on socio-economic segregation from 13 European cities. Cities include Amsterdam, Athens, Budapest, London, Milan, Madrid, Oslo, Prague, Riga, Stockholm, Tallinn, Vienna and Vilnius. Comparing 2001 and 2011, this multi-factor approach links segregation to four underlying universal structural factors: social inequalities, global city status, welfare regimes and housing systems. Hypothetical segregation levels derived from those factors are compared to actual segregation levels in all cities. Each chapter provides an in-depth and context sensitive discussion of the unique features shaping inequalities and segregation in the case study cities. The main conclusion of the book is that the spatial gap between the poor and the rich is widening in capital cities across Europe, which threatens to harm the social stability of European cities. This book will be a key reference on increasing segregation and will provide valuable insights to students, researchers and policy makers who are interested in the spatial dimension of social inequality in European cities. A PDF version of the introduction and conclusion are available Open Access at [www.tandfebooks.com](http://www.tandfebooks.com). *The Virtual Linguistics Campus* Jürgen Handke, Peter Franke,

*Looking and Acting* Michael Land, Benjamin Tatler, 2009-07-30 The human visual system is amazing in its ability to guide us in a diverse range of everyday tasks - driving, preparing food, reading - in addition to leisurely pursuits such as ball games, or reading music. Somehow, without conscious effort, our eyes find the information we need to negotiate the world around us. Only recently, however, has it become possible to explore just how it is that our eyes can supply the brain systems controlling our limbs with the information they need to carry out these tasks. Thanks to the development of head-mounted eye trackers, we can now explore the strategies that the eye movement system uses in the initiation and guidance of action. *Looking and Acting* explores a wide variety of visually guided activities - from sedentary activities such as reading music, or drawing, to dynamic behaviours such as driving or playing cricket. It proposes that the eye movement system has its own store of knowledge about where to find the most appropriate information for guiding action - information not often available to conscious scrutiny. Thus, every action has its own specific repertoire of linked eye movements. The book starts with a brief background of eye movement studies. Part two reviews observations and analyses of different activities. Finally, the book looks at visual representations, the neurophysiology of the brain systems involved, and the roles of attention and learning. Opening up a whole new field in eye movement research, the fascinating new book will be of great interest to all vision scientists, (psychologists, physiologists, ophthalmologists) whether at professional, graduate, or advanced undergraduate levels.

*PostgreSQL* Bruce Momjian, 2001 The open source PostgreSQL database is soaring in popularity, as thousands of database and web professionals discover its powerful features, transaction support, performance, and industrial-strength scalability. In this book, a founding member of the PostgreSQL development team introduces everything you need to know to succeed with PostgreSQL, from basic SQL commands through database administration and optimization. PostgreSQL assumes no previous database expertise: it establishes a firm foundation of basic concepts and commands before turning to PostgreSQL's advanced, innovative capabilities. Bruce Momjian walks readers step-by-step from their first database queries through the complex queries needed to solve real-world problems. He presents proper query syntax, then explores the value and use of each key SQL commands in working applications. Learn to manipulate and update databases, customize queries, work with SQL aggregates, use joins, combine SELECTs with subqueries, work with triggers and transactions, import and export data, use PostgreSQL query tools, and more. Discover PostgreSQL techniques for server-side programming and multi-user control, and master PostgreSQL's interfaces to C, C++, ODBC, JDBC, Perl, and Tcl/Tk. You'll also find detailed coverage of PostgreSQL administration, including backups, troubleshooting, and access configuration.

**GlobalSoilMap** Dominique Arrouays, Neil McKenzie, Jon Hempel, Anne Richer de Forges, Alex B. McBratney, 2014-01-27 GlobalSoilMap: Basis of the global spatial soil information system contains contributions that were presented at the 1st GlobalSoilMap conference, held 7-9 October 2013 in Orléans, France. These contributions demonstrate the latest developments in the GlobalSoilMap project and digital soil mapping technology for which the ultimate aim is to produce a high resolution digital spatial soil information system of selected soil properties and their uncertainties for the entire world. GlobalSoilMap: Basis of the global spatial soil information system aims to stimulate capacity building and new incentives to develop full GlobalSoilMap products in all parts of the world.

*European Regions* Peter Flora, Franz Kraus, Rick Walton, Daniele Caramani, Jordi Marti-Henneberg, Jürgen Schweikart, 2016-04-27 *European Regions* is a comparative and historical reference handbook with accompanying CD-ROM, giving comprehensive coverage of territorial regions throughout the whole of Europe in the period 1870-2000. The work provides a systematic presentation of state formation and boundary-building, their territorial structure and political-administrative status of regions for each of the 23 countries covered. In addition, the CD-ROM contains a complete set of digital regional maps in GIS format for the single countries and Europe as a whole for various points in time (usually 10 year intervals).

**Beginning MapServer** Bill Kropla, 2006-11-05 \* The first book to cover MapServer. \* Shows readers how to build dynamic maps using popular open source languages including PHP, Perl and Python. \* Shows readers how to pull map information from a MySQL database, to build data-driven mapping applications.

**Introduction to Cartography** Caroline Rivera, 2021-11-16 The study and practice of making maps is referred to as cartography. It is mainly concerned with the modeling of reality such that effective communication can take place regarding spatial information. This discipline can be broadly divided into two categories, namely, general cartography and thematic cartography. General cartography caters to a general audience and thus can contain a variety of different features. Thematic cartography focuses on using specific geographic themes which are aimed at a selected target audience. Modern cartography uses computer software such as CAD, GIS and specialized illustration software for making maps. Some of the symbols which are used in maps are legend, compass rose, bar scale and title. The topics included in this book on cartography are of utmost significance and bound to provide incredible insights to readers. It aims to shed light on some of the unexplored aspects of this field. This book will provide comprehensive knowledge to the readers.
