Internet Research Skills Niall O'Dochartaigh,Niall Ó Dochartaigh,2007 Internet Research Skills is a clear and concise guide to the effective use of the Internet for students in the social sciences. The open web is becoming central to student research practice, not least because of its accessibility, and this clear text describes search strategies and outlines the critical skills necessary to deal with such diverse and disorganized materials. This book covers all of the essential aspects of Internet research, with each chapter containing a number of illustrations, inset boxes, and short exercises.

Great Scouts! Nora Paul,Margot Williams,1999 The most common complaint about the World Wide Web is its enormity and the time it takes to sift through its vast resources. This book highlights specific subject areas and outlines the best starting points for finding information quickly.

Internet Research Ned L. Fielden,2001-01-01 To many people, the use of computers and the Internet as research tools is not a new concept. To others, though, computers are a relatively recent if necessary addition to their research toolkit. A lack of experience presents many difficulties for first-time users and others with limited computer know-how. This work, a second edition to the acclaimed Internet Research: Theory and Practice provides useful information for anyone who wants to broaden the range and scope of their research tools or anyone who wants to increase their knowledge about what is available electronically. The author discusses the following: basic methods of research using Internet protocols, Internet history, techniques for online searching, research theory and suggestions for maximizing results, mechanisms helpful in distinguishing good from bad or mediocre information, and ways for individuals to improve their research skills. Also included is an expanded discussion of Internet search engines and their operation, issues in scholarly communication and other emerging matters, and an enlarged and updated bibliography.

Using the Internet, Online Services & CD-ROMs for Writing Research and Term Papers Charles Harmon,1963 This is a basic guide to researching, writing and documentation for term papers which should be particularly useful for high school and college students. This text explains how to use: the Internet for subject searches, finding the most useful sites for popular topics and printing out hard copies (attention is also paid to browsing the Web and tapping into library resources); CD-ROMs for searching indexes, databases, full-text sources (such as electronic encyclopaedias) and learning about the most helpful CD-ROMs that are generally available; and online services such as America Online, Compuserve and Prodigy efficiently and economically to find information.

Internet Research Annual Mia Consalvo,Kate O'Riordan,2005 This peer-reviewed collection represents some of the finest research presented at the 2004 Association of Internet Researchers Conference held in Sussex in 2004. Responding to the theme of ubiquity, papers collected here represent a diverse range of inquiries into the development, as well as perceived development, of the Internet. Offering new and important work about blogs, online games, users, norms and access, to name just a few topics, this collection is a must-read for Internet scholars intent on keeping pace with a rapidly expanding field.

Doing Internet Research Steve Jones,1998-11-03 The Internet is a medium with great consequences for social and economic life. This book is written to help people discern in what ways it has commanded the public imagination, and the methodological issues that arise when one tries to study and understand the social processes occurring within it. The contributors offer original responses in the search for, and critique of, methods with which to study the Internet and the social, political, economic, artistic, and communicative phenomena occurring within and around it.

The Ethics of Internet Research Heidi A. McKee,James E. Porter,2009 Drawing from interviews with Internet researchers from across the globe who work in diverse disciplines and in a wide array of online venues, this book examines ethical issues and questions that Internet researchers may encounter throughout the research process. Although the ethics of Internet research are complex, the aim of the book is to provide a rhetorical, case-based process to aid researchers in ethical decision making. In doing so, the book provides Internet researchers with useful resources and heuristics for engaging in ethical practices, interactions, and problem solving for their research.

Internet Research Annual Mia Consalvo,Matthew Allen,2005 This collection brings together the most interesting and outstanding papers from the Internet Research Conference held in Toronto in 2003. Taken individually, each paper makes an important contribution to the emerging field of Internet research, but the collection as a whole presents key perspectives on the most significant directions in the field. In particular, the papers discuss how we must now consider the relationship of Internet-based activities to those «offline», rather than concentrating exclusively on the virtual. Papers advance important ideas and present research findings in relation to information theory, the Internet at home, theorizing time and the Internet, online activism, the digital divide, and more. This annual, the second in the series, demonstrates the vibrant and diverse nature of Internet scholarship fostered by the Association of Internet Researchers.

A Guide to Conducting Online Research Ted J Gaiser,Anthony E Schreiner,2009-03-18 A Guide to Conducting Online Research is designed to support students, academics and research practitioners in using technology to conduct their research. The book begins by looking at what questions to ask and how to prepare to conduct online research, then concentrates on particular technologies and how to employ them effectively, before concluding with a discussion of the peculiarities of conducting research in the online environment. Practical advice is offered on common issues and problems, such as: – How to decide which application is best for your research purposes? – What can be done to guarantee the anonymity of research participants? – What kinds of challenges do firewalls present and how can they be mitigated? A Guide to Conducting Online Research provides a wealth of advice, explanation, instruction, self-help tips and examples, making this a helpful resource for anyone using technology in conducting their research.

Information Trapping Tara Calishain,2006-12-07 How many times have you run a Google search that resulted in thousands of results? With over 8 billion pages online and more posted every day, the Web more than likely contains the information you're looking for – if only you could find it. In Information Trapping: Real-Time Research on the Web, Internet-search-engine expert Tara Calishain makes researching more efficient and rewarding for anyone for whom the Web is an indispensable tool – academics, journalists, scientists, and professionals, as well as bloggers, genealogists, and hobbyists. She does so by teaching the latest techniques for building automated information-gathering systems. As an alternative to the typical one-time search for information, Tara demonstrates how readers can use RSS feeds, page monitoring tools, and other software to set up information streams of many different data types – from text to multimedia to conversations – for capture and review.

What is Online Research? Tristram Hooley,Jane Wellens,John Marriott,2012-06-21 The massive expansion of the internet into every aspect of our lives creates a challenge for social researchers: can they simply transfer their traditional methods and techniques online or do they need to reinvent research methods for the new environment? As online research becomes increasingly prevalent it becomes more important for researchers to have an answer to these questions and an approach to conducting research online. This book is a straightforward, accessible introduction to social research online. It covers the key issues and concerns for social scientists: online surveys, focus groups, interviews, ethnographies and experiments, as well as discussing the implications of social media, and of online research ethics. It provides a detailed, up-to-date glossary and bibliography for those new to the area. Short, clear case studies throughout allow students to see examples of

the research in practice. Wide-ranging and interdisciplinary, *What is Online Research?* shows social scientists of all levels - from undergraduates to established researchers - how to engage in the online environment in appropriate ways, and points the way forward for future research.

The Internet Research Guide Timothy K. Maloy, 1999 This guide to the Internet has been revised to reflect the latest developments in Web technology and to bring readers up-to-date on techniques for hunting down information in cyberspace. Rather than focusing on connection and navigation, the book explains how to research specific subject areas. Providing information on using browsers, Newsgroups and Listservs, it covers researching for general, corporate, small business, finance, law, journalism, academic, literature and the social and hard sciences. Individual chapters for national, big city and regional reporters are included, as well as detailed sections on specialized research, libraries, newspaper archives, Usenet and e-mail.

Children, Risk and Safety on the Internet Livingstone, Sonia, Haddon, Leslie, 2012-07-18 As internet use is extending to younger children, there is an increasing need for research focus on the risks young users are experiencing, as well as the opportunities, and how they should cope. With expert contributions from diverse disciplines and a uniquely cross-national breadth, this timely book examines the prospect of enhanced opportunities for learning, creativity and communication set against the fear of cyberbullying, pornography and invaded privacy by both strangers and peers. Based on an impressive in-depth survey of 25,000 children carried out by the EU Kids Online network, it offers wholly new findings that extend previous research and counter both the optimistic and the pessimistic hype. It argues that, in the main, children are gaining the digital skills, coping strategies and social support they need to navigate this fast-changing terrain. But it also identifies the struggles they encounter, pinpointing those for whom harm can follow from risky online encounters. Each chapter presents new findings and analyses to inform both researchers and students in the social sciences and policy makers in government, industry or child welfare who are working to enhance children's digital experiences.

SAGE Internet Research Methods Jason Hughes, 2012-06-25 Historically, social researchers have shown a willingness to exploit new technologies to enhance, facilitate and support their various activities. However, arguably no other technological development has influenced the landscape of social research as rapidly and fundamentally as the Internet. This collection avoids both uncritical embrace and wholesale dismissal by considering some of the key literature in the field of Internet research methods. Volume One: Core Issues, Debates and Controversies in Internet Research introduces themes and issues that run across all four volumes such as: epistemology, ontology and methodology in the online world; access, social divisions and the 'digital divide'; and the ethics of online research. Volume Two: Taking Research Online - Internet Survey and Sampling addresses the range of resources, digital archives and Internet-based data sources that exist online from relatively straightforward and practical guides to such material through to more polemical pieces which consider problems relating to the use, access and analysis of online data and resources. Volume Three: Taking Research Online - Qualitative Approaches considers the broad range of approaches to conducting research via or 'in' the Internet. The focus is on conventional methods that have been 'taken online', and which in doing so, have become transformed in scope and character. Volume Four: Research 'On' and 'In' the Internet - Investigating the Online World follows logically from that which precedes it in exploring how social research has been 'taken online', not simply through the deployment of existing methods and techniques via the Internet, but in researchers' increasing recognition and investigation of the online world as a sphere of human interaction - a socio-cultural arena to be explored 'from the desktop' as it were.

The Internet Research Handbook Niall Ó Dochartaigh, 2002 Who it's aimed at

The Internet Research Handbook Niall Ó Dochartaigh, 2002 Internet Research Methods provides clear and detailed advice on the main areas of Internet research. For those carrying out research on-line, a number of very different sets of skills from the conventional 'systematic way of asking questions', is required. Niall Ó Dochartaigh sets out, in clear and simple terms, best practice in the use of the Internet as a mainstream research resource. He covers: learning how to access the correct sites and extract information in the shortest possible time; maximizing the possibilities of email contact with other researchers around the world; finding out about the major databases which are devoted to the social sciences; learning how to do the detective work necessary to evaluate and to cite documents whose authorship and origins are often unclear; This practical guide deals with the Internet as a thread which runs through the entire research process, from formulating a research question to publishing the results of research.

Web Search Savvy Barbara G. Friedman, 2004-09-22 Web Search Savvy: Strategies and Shortcuts for Online Research provides readers of all skill levels with efficient search strategies for locating, retrieving, and evaluating information on the Internet. Utilizing her experience as a reporter working on deadline, author Barbara G. Friedman offers the most effective methods for finding useful and trustworthy data online, and presents these techniques in a straightforward, user-friendly manner. Anyone who uses the Internet for research will find much of value here, including techniques that harness the power of advanced searches to optimize search results, avoid advertising clutter, and locate low- or no-cost databases. Screen captures and diagrams illustrate the steps, rationale, and results to accompany various search strategies. This book emphasizes techniques that make the Web work for individuals rather than for advertisers, such as choosing the most appropriate search engine for the job and tweaking its advanced options to narrow a search and optimize results; identifying cost-free sources of online data; using creative approaches to locate information; evaluating the integrity of online data; and protecting the privacy of the researchers and the researched. Web Search Savvy is an essential resource for students, scholars, and practitioners in journalism and mass communications, and it offers practical and useful guidance for anyone researching information online.

A Simple Guide to Internet Research Greg Spence, 2001 Each book in the Simple Guide series provides a subject at a basic level. Only key definitions are discussed, and the detail is kept to the average reader's requirements. Background, history and theory are left out, and only useful and popular tasks are discussed.

Internet Research Annual Mia Consalvo, Nancy Baym, Jeremy Hunsinger, Klaus Bruhn Jensen, 2004 Internet Research Annual offers a selection of the best work presented at the first three conferences of the Association of Internet Researchers, and provides a useful overview of the cutting-edge in Internet studies. Established scholars and new researchers address issues such as communities on/off line, the Internet as a methodological tool and space for research, and the places, politics, and policies of the Internet, creating a volume that comprehensively covers the field of Internet research. Also included are a brief history of the organization, a list of previously published papers from the conferences, and works by several of the keynote speakers including Phil Agre, Barbara Warnick, Bill Dutton, Sheizaf Rafaeli, Susan Herring, Robin Mansell, and much more.
