However, despite such challenges the global tourism system has in the main retained its past vitality although in some cases in a different form. The book investigates different kinds of crisis and unpacks understandings of crisis in relation to various components in the contemporary tourism system. The aim of this book therefore is to critically analyse the relationship between tourism and crises. The volume focuses on the roles and potential of tourism for development and relations between tourism, environment and broad global process of change at different levels of analysis, highlighting different types of crisis. In particular it questions the general conviction that tourism-led development is a sustainable and necessarily solid platform from which to develop local, national and regional economies from a range of perspectives. Written by leading academics in the field this book offers valuable insight into tourism's relationship with socio - cultural, environment, economic and political crisis as well as the challenges facing future tourism development.

The Audacious Ascetic Flagg Miller, 2015 In late 2002, over 1500 audiotapes were discovered in Kandahar, Afghanistan, in a house once occupied by Osama bin Laden. The Audacious Ascetic is the first book to explore this extraordinary archive. It details how Islamic cultural, legal, theological and linguistic vocabularies shaped militants' understandings of al-Qa'ida, and, more controversially, challenges the notion that the group's original adversary was America and the 'far enemy'. Miller argues that Western security agencies' 'management' of Bin Laden's growing reputation went awry. When magnified through global media coverage, narratives of al-Qa'ida's coherence were exploited by Osama and his militant supporters for their own ends. Focusing on over a dozen previously

unpublished speeches by Bin Laden as well as on discussions by top al-Qa'ida leaders and Arab-Afghans, Miller chronicles the Saudi radical's evolving relationship with a host of Muslim insurgencies that found his stripe of asceticism (zuhd) tactically useful, especially when circulated via audiotape. These recordings also reveal militants' disenchantment when Bin Laden, marginalized through the '90s, began pandering to Western television networks in his attempt to direct heterodox Islamist armed struggles against America. Such audio evidence exposes al-Qa'ida's lack of coordination before 9-11 and invites scrutiny of dominant narratives of Western law enforcement, intelligence and terrorism analysts.

**U.S. Military Information Operations in Afghanistan** Arturo Munoz, 2012-04-30 The U.S. Marine Corps, which has long recognized the importance of influencing the civilian population in a counterinsurgency environment, requested an evaluation of the effectiveness of the psychological operations element of U.S. military information operations in Afghanistan from 2001 to 2010 based on how well messages and themes were tailored to target audiences. This monograph responds to that request.

*Software and Mind* Andrei Sorin, 2013-01-01 Addressing general readers as well as software practitioners, *Software and Mind* discusses the fallacies of the mechanistic ideology and the degradation of minds caused by these fallacies. Mechanism holds that every aspect of the world can be represented as a simple hierarchical structure of entities. But, while useful in fields like mathematics and manufacturing, this idea is generally worthless, because most aspects of the world are too complex to be reduced to simple hierarchical structures. Our software-related affairs, in particular, cannot be represented in this fashion. And yet, all programming theories and development systems, and all software applications, attempt to reduce real-world problems to neat hierarchical structures of data, operations, and features. Using Karl Popper's famous principles of demarcation between science and pseudoscience, the book shows that the mechanistic ideology has turned most of our software-related activities into pseudoscientific pursuits. Using mechanism as warrant, the software elites are promoting invalid, even fraudulent, software notions. They force us to depend on generic, inferior systems, instead of allowing us to develop software skills and to create our own systems. Software mechanism emulates the methods of manufacturing, and thereby restricts us to high levels of abstraction and simple, isolated structures. The benefits of software, however, can be attained only if we start with low-level elements and learn to create complex, interacting structures. Software, the book argues, is a non-mechanistic phenomenon. So it is akin to language, not to physical objects. Like language, it permits us to mirror the world in our minds and to communicate with it. Moreover, we increasingly depend on software in everything we do, in the same way that we depend on language. Thus, being restricted to mechanistic software is like thinking and communicating while being restricted to some ready-made sentences supplied by an elite. Ultimately, by impoverishing software, our elites are achieving what the totalitarian elite described by George Orwell in *Nineteen Eighty-Four* achieves by impoverishing language: they are degrading our minds.

**Policy Practice and Digital Science** Marijn Janssen, Maria A. Wimmer, Ameneh Deljoo, 2015-06-03 The explosive growth in data, computational power, and social media creates new opportunities for innovating the processes and solutions of Information and communications technology (ICT) based policy-making and research. To take advantage of these developments in the digital world, new approaches, concepts, instruments and methods are needed to navigate the societal and computational complexity. This requires extensive interdisciplinary knowledge of public administration, policy analyses, information systems, complex systems and computer science. This book provides the foundation for this new interdisciplinary field, in which various traditional disciplines are blending. Both policy makers, executors and those in charge of policy implementations acknowledge that ICT is becoming more important and is changing the policy-making process, resulting in a next generation policy-making based on ICT support. Web 2.0 and even Web 3.0 point to the specific applications of social networks, semantically enriched and linked data, whereas policy-making has also to do with the use of the vast amount of data, predictions and

forecasts, and improving the outcomes of policy-making, which is confronted with an increasing complexity and uncertainty of the outcomes. The field of policy-making is changing and driven by developments like open data, computational methods for processing data, opinion mining, simulation and visualization of rich data sets, all combined with public engagement, social media and participatory tools.

**The Nile in Legal and Political Perspective** Mahemud E. Tekuya, 2023-10-20 Competition over the Nile watercourse is becoming a global crisis. As population growth, economic development, and urbanization increase the demand for water in the Nile Basin while climate change threatens its supply, the region faces a looming water crisis. An effective resolution of this multifaceted issue, which impacts 11 African countries, requires detailed multidisciplinary research. Until now the academic discourse regarding the Nile watercourse has been primarily dominated by monodisciplinary studies. This book fills that gap, providing a retrospective and prospective look at the Nile through multidisciplinary lenses—commingling history, hydro-politics, climate change, and law. It scrutinizes the legal and hydro-political trajectories of the Nile Basin, from the 4th century A.D. to 2022.

**Tourism and Change in Polar Regions** C. Michael Hall, Jarkko Saarinen, 2010-07-15 Explores the relationship between tourism and climate change in both Arctic and Antarctic polar regions by considering the associated environmental, economic, social and political factors. This book draws on both Arctic and Antarctic Polar region case studies to help illustrate these climate change issues.

*Virtualization of Universities* Thomas Pfeffer, 2011-12-09 The purpose of this volume is to shape conceptual tools to understand the impact of new information and communication technologies (ICTs) on the organization of universities. Traditional research-based universities, the most typical representatives of the higher education system, find themselves challenged by the speed and the wide range of technical innovations, but also by a vast array of implicit assumptions and explicit promises associated with the distribution of digital media. The author observes that as universities increasingly use digital media (computers and the Internet) to accomplish their tasks, a transformation takes place in an evolutionary rather than in a revolutionary way. Using the University of Klagenfurt as an in-depth case study, he explores such dynamic issues as how digital media affect the practice of research, the preservation and dissemination of knowledge (for example, through publishing and archiving), and delivery of education at universities. More broadly, he considers issues of organizational culture and design, administration, and leadership as universities integrate digital technologies into all aspects of their operations.
