Robust and Online Large-Scale Optimization Ravindra K. Ahuja, Rolf H. Möhring, Christos D. Zaroliagis, 2009-10-21 Scheduled transportation networks give rise to very complex and large-scale network optimization problems requiring innovative solution techniques and ideas from mathematical optimization and theoretical computer science. Examples of scheduled transportation include bus, ferry, airline, and railway networks, with the latter being a prime application domain that provides a fair amount of the most complex and largest instances of such optimization problems. Scheduled transport optimization deals with planning and scheduling problems over several time horizons, and substantial progress has been made for strategic planning and scheduling problems in all transportation domains. This state-of-the-art survey presents the outcome of an open call for contributions asking for either research papers or state-of-the-art survey articles. We received 24 submissions that underwent two rounds of the standard peer-review process, out of which 18 were finally accepted for publication. The volume is organized in four parts: Robustness and Recoverability, Robust Timetabling and Route Planning, Robust Planning Under Scarce Resources, and Online Planning: Delay and Disruption Management.

Smart and Sustainable Supply Chain and Logistics – Trends, Challenges, Methods and Best Practices Paulina Golinska-Dawson, Kune-Muh Tsai, Monika Kosacka-Olejnik, 2020-12-12 This book discusses the critical contemporary issues of sustainability and integration of physical and information flow. It explores the digitalization of logistics processes and the need for a more integrated and a seamless cooperation in supply chain management, which are dominant trends in business practice. Moreover, it examines how the pressure for CO2 emission reductions and more resource-efficient business models influences the organization of logistics operations on both a local and global scale, demonstrating that integrating physical and cyber systems is necessary to achieve a more environmentally friendly, safe logistics and supply chain operations. In the individual chapters, the authors discuss the new qualitative and quantitative theoretical methods and models and also analyze case studies from business practice. This book provides valuable insights for academics, Ph.D. students and practitioners wishing to deepen their understanding of logistics operations and management.

Robust Intelligent Systems Alfons Schuster, 2008-08-06 Our time recognizes robustness as an important, all-pervading feature in the world around us. Despite its omnipresence, robustness is not entirely understood, rather difficult to define, and, despite its obvious value in many situations, rather difficult to achieve. One of the goals of this edited book is to report on the topic of robustness from a variety and diverse range of fields and perspectives. We are interested, for instance, in fundamental strategies nature applies to make systems robust—and arguably “intelligent”—and how these strategies may hold as general design principles in modern technology. A particular focus is on computer-based systems and applications. This in mind, the book has four main sections: Part I has a look at robustness in terms of underlying technologies and infrastructures upon which many computer-based “intelligent” systems reside and investigates robustness on the hardware and software level, but also in larger environments such as the Internet and self-managing systems. The contributions in Part II target robustness in research areas that are inspired by biology, including brain-computer interfaces, biological networks, and biological immune systems, for example. Part III involves the exciting field of artificial intelligence. The chapters here discuss the value of robustness as a general design principle for artificial intelligence, stressing its potential in areas such as humanoid robotics and image processing.

Guide to Reliable Internet Services and Applications Charles R. Kalmanek, Sudip Misra, Yang (Richard) Yang, 2010-06-09 An oft-repeated adage among telecommunication providers goes, “There are five things that matter: reliability, reliability, reliability, time to market, and cost. If you can't do all five, at least do the first three.” Yet, designing and operating reliable networks and services is a Herculean task. Building truly reliable components is unacceptably expensive, forcing us to construct reliable systems out of unreliable components. The resulting systems are inherently complex, consisting of many different kinds of components running a variety of different protocols that interact in subtle ways. Inter-networks such as the Internet span multiple regions of administrative control, from campus and corporate networks to Internet Service Providers, making good end-to-end performance a shared responsibility borne by sometimes uncooperative parties. Moreover, these networks consist not only of routers, but also lower-layer devices such as optical switches and higher-layer components such as firewalls and proxies. And, these components are highly configurable, leaving ample room for operator error and buggy software. As if that were not difficult enough, end users understandably care about the performance of their higher-level applications, which has a complicated relationship with the behavior of the underlying network. Despite these challenges, researchers and practitioners alike have made tremendous strides in improving the reliability of modern networks and services.

Reliable Communications within Cyber-Physical Systems Using the Internet (RC4CPS) Mohammad Elattar, 2019-08-07 This thesis describes the research done regarding communication reliability when using the Internet to realize the communications for cyber-physical systems (CPSs). In a nutshell, the

book first presents the obtained results from real-world measurements describing the reliability of today's Internet in terms of the availability and diversity of a wide set of end-to-end paths in the Internet. After that, the book describes a new approach along with its realization as a transport protocol to improve reliability and enable the utilization of Internet within future CPSs. In the first chapters of the book, the need for reliable communication to realize CPSs and the challenges of using the Internet as a communication network for such systems are described. The existing literature is analyzed after that and the identified research gap is highlighted. The proposed approach along with conducted measurements to evaluate it are described in the remaining chapters of the book.

Handbook of Robust Low-Rank and Sparse Matrix Decomposition Thierry Bouwmans,Necdet Serhat Aybat,El-hadi Zahzah,2016-09-20 Handbook of Robust Low-Rank and Sparse Matrix Decomposition: Applications in Image and Video Processing shows you how robust subspace learning and tracking by decomposition into low-rank and sparse matrices provide a suitable framework for computer vision applications. Incorporating both existing and new ideas, the book conveniently gives you one-stop access to a number of different decompositions, algorithms, implementations, and benchmarking techniques. Divided into five parts, the book begins with an overall introduction to robust principal component analysis (PCA) via decomposition into low-rank and sparse matrices. The second part addresses robust matrix factorization/completion problems while the third part focuses on robust online subspace estimation, learning, and tracking. Covering applications in image and video processing, the fourth part discusses image analysis, image denoising, motion saliency detection, video coding, key frame extraction, and hyperspectral video processing. The final part presents resources and applications in background/foreground separation for video surveillance. With contributions from leading teams around the world, this handbook provides a complete overview of the concepts, theories, algorithms, and applications related to robust low-rank and sparse matrix decompositions. It is designed for researchers, developers, and graduate students in computer vision, image and video processing, real-time architecture, machine learning, and data mining.

Arethuse 1/2 2015 ,2015-07-10 The papers presented in this issue are those that the Scientific Committee has assessed as being particularly of merit. They relate to three areas, Strategic

Management, Economics and Statistics, and Public Finance. These areas have not only been the subject of study of researchers who adhere to the international Association, Arethuse, but especially in recent years provide a useful opportunity for whoever operates in European countries (university researchers, spin-off, managers, entrepreneurs, local associations, public authorities, governmental and non- governmental financial institutions etc.) to enrich their knowledge. In this year with the Expo taking place in Italy, the issues concerning the quality and development of the people and territory have led to scientific fields of study and discussions that are of particular global relevance. The Universal Exposition of Milan places special emphasis on sustainable development and the new sense of globalization of economic and social phenomena. A great deal of research, the results of which are presented in this issue, provide useful contributions. They highlight the metrics to be used to promote the development of the territory; they study the impact of information technology in the tourism sector; they present studies on the most appropriate reconfiguration of relationships with retailers and the reconfiguration of supply chains; finally, special attention is paid to the redesign of management techniques and of inter- enterprise relations, in order to facilitate the growth of SMEs and the environment in which they are rooted.

Robust Evacuation Planning for Urban Areas Marc Maiwald,2017-10-17 In evacuation planning the capacities of the street network are usually assumed as in daily-traffic. However, such rare and unique situations induce disaster-related or traffic-related factors which affect the capacities of the street network negatively. This work focuses on a new robust evacuation concept in order to reduce the effects of such random capacity disruptions.
