Reproductive Neuroendocrinology and Social Behavior Ishwar S. Parhar,Tomoko Soga,Sonoko Ogawa,2016-10-12 Anti-social behaviors and social deficits induced mental disorders are critical problems in our society today. Social behaviors and interactions are shaped by experience, hereditary components (genes, hormones and neuropeptides) and environmental factors (photoperiods and metabolic signals). In addition to the classical gonadotropin-releasing hormone, RFamide peptides, kisspeptin and gonadotropin-inhibiting hormone are emerging as important regulators of the reproductive axis. These neuropeptides are evolutionarily conserved and are regulated by environmental factors. In this Research Topic, we advocate more recent advances in reproductive neuropeptides and sex steroids in the domains of social behavior including sexual and parental behavior, aggression, stress and anxiety. Using multiple species model, we also review how genes and the neuroendocrine system interact at the cell and organismic levels to contribute to social behavior in particular the epigenetic genomic changes caused by early life environment. We provide comprehensive insights of distinct neural networks and how cellular and molecular events in the brain regulate social behavior from a comparative perspective.

Handbook of Social Justice Theory and Research Clara Sabbagh,Manfred Schmitt,2016-02-08 The International Society for Justice Research (ISJR) aims to provide a platform for interdisciplinary justice scholars who are encouraged to present and exchange their ideas. This exchange has yielded a fruitful advance of theoretical and empirically-oriented justice research. This volume substantiates this academic legacy and the research prospects of the ISJR in the field of justice theory and research. Included are themes and topics such as the theory of the justice motive, the mapping of the multifaceted forms of justice (distributive, procedural) and justice in context-bound spheres (e.g. non-humans). It presents a comprehensive state of the art overview in the field of justice research theory and it puts forth an agenda for future interdisciplinary and international justice research. It is worth noting that authors in this proposed volume represent ISJR's leading scholarship. Thus, the compilation of their research within a single framework exposes potential readers to high quality academic work that embodies the past, current and future trends of justice research.

Face Value Alexander Todorov,2017-05-30 The scientific story of first impressions—and why the snap character judgments we make from faces are irresistible but usually incorrect We make up our minds about others after seeing their faces for a fraction of a second—and these snap judgments predict all kinds of important decisions. For example, politicians who simply look more competent are more likely to win elections. Yet the character judgments we make from faces are as inaccurate as they are irresistible; in most situations, we would guess more accurately if we ignored faces. So why do we put so much stock in these widely shared impressions? What is their purpose if they are completely unreliable? In this book, Alexander Todorov, one of the world's leading researchers on the subject, answers these questions as he tells the story of the modern science of first impressions. Drawing on psychology, cognitive science, neuroscience, computer science, and other fields, this accessible and richly illustrated book describes cutting-edge research and puts it in the context of the history of efforts to read personality from faces. Todorov describes how we have evolved the ability to read basic social signals and momentary emotional states from faces, using a network of brain regions dedicated to the processing of faces. Yet contrary to the nineteenth-century pseudoscience of physiognomy and even some of today's psychologists, faces don't provide us a map to the personalities of others. Rather, the impressions we draw from faces reveal a map of our own biases and stereotypes. A fascinating scientific account of first impressions, Face Value explains why we pay so much attention to faces, why they lead us astray, and what our judgments actually tell us.

Biometric Systems James L. Wayman,Anil K. Jain,Davide Maltoni,Dario Maio,2005-12-06 Biometric Systems provides practitioners with an overview of the principles and methods needed to build reliable biometric systems. It covers three main topics: key biometric technologies, design and management issues, and the performance evaluation of biometric systems for personal verification/identification. The four most widely used technologies are focused on - speech, fingerprint, iris and face recognition. Key features include: in-depth coverage of the technical and practical obstacles which are often neglected by application developers and system integrators and which result in shortfalls between expected and actual performance; and protocols and benchmarks which will allow developers to compare performance and track system improvements.
