**User Experience Research and Usability of Health Information Technology** Jessica Lynn Campbell, 2024-02-02 Health information technology (HIT) is a critical component of the modern healthcare system. Yet to be effective and safely implemented in healthcare organizations and physicians and patients' lives, it must be usable and useful. User Experience (UX) research is required throughout the full system design lifecycle of HIT products, which involve a user-centered and human-centered approach. This book discusses UX research frameworks, study designs, methods, data-analysis techniques, and a variety of data collection instruments and tools that can be used to conduct UX research in the healthcare space, all of which involve HIT and digital health. This book is for academics and scholars to be used to design studies for graduate dissertation work, in independent research, or as a textbook for UX/usability courses in health informatics or related health information and communication courses. This book is also useful for UX practitioners because it provides guidance on how to design a user research or usability study and focuses on leveraging a mixed-methods approach, including step-by-step instructions and best practices for conducting: Field studies Interviews Focus groups Diary studies Surveys Heuristic evaluation Cognitive walkthrough Think aloud A plethora of standardized surveys and retrospective questionnaires (SUS, Post-study System Usability Questionnaire

(PSSUQ)) are also included. UX researchers and healthcare professionals will gain an understanding of how to design a rigorous, yet feasible study that generates useful insights to inform the design of usable HIT. Everything from consent forms to how many participants to include in a usability study has been covered in this book. The author encourages user-centered design (UCD), mixed-methods, and collaboration amongst interdisciplinary teams. Knowledge from many inter-related disciplines, like psychology, technical communication (TC), and human-computer interaction (HCI), together with experiential knowledge from experts is offered throughout the text.

**HCI for Children with Disabilities** Josefina Guerrero-Garcia,Juan Manuel González-Calleros,Jaime Muñoz-Arteaga,César A. Collazos,2017-05-03 In this book the authors present an HCI principle-based approach to develop applications to assist children with disabilities. Design knowledge related to developing complex solution for this audience is explained from an interaction design point of view. Different methodologies, models and cases studies are covered with the aim of helping practitioners to adopt any of the proposed techniques presented in this book. HCI methodologies that adopt an agile strategy are presented, including novel techniques at different development steps, such as: board games, agile planning, agile implementation, method engineering. As this is a huge research field the authors do not just focus on a specific disability but test their methods in different contexts with excellent results. Readers of this book will find both a well-organized and structured set of methodologies and also material that has been tested and refined throughout years of research. Using detailed case studies the reader is guided towards specific solutions which will also provide insights into how to address related problems.

**Multi-Agent Systems and Applications IV** Michal Pechoucek, Paolo Petta, Laszlo Zsolt Varga, 2005-10-03 The aim of the CEEMAS conference series is to provide a biennial forum for the presentation of multi-agent research and development results. With its particular geographical orientation towards Central and Eastern Europe, CEEMAS has become an internationally recognised event with participants from all over the world. After the successful CEEMAS conferences in St. Petersburg (1999), Cracow (2001) and Prague (2003), the 2005 CEEMAS conference takes place in Budapest. The programme committee of the conference series consists of established researchers from the region and renowned international colleagues, sharing the

prominent rank of CEEMAS among the leading events in multi-agent systems. In the very competitive field of agent oriented conferences and workshops nowadays (such as AAMAS, WIIAT, EUMAS, CIA, MATES) the special profile of CEEMAS is that it is trying to bridge the gap between applied research achievements and theoretical research activities. Our ambition is to provide a forum for presenting theoretical research with an evident application potential, implemented application prototypes and their properties, as well as industrial case studies of successful (but also unsuccessful) agent technology deployments. This is why the CEEMAS proceedings volume provides a collection of research and application papers. The technical research paper section of the proceedings (see pages 11–499) contains pure research papers as well as research results in application settings while the application papers section (see pages 500–530) contains papers focused on application aspects. The goal is to demonstrate the real life value and commercial reality of multi-agent systems as well as to foster communication between academia and industry in this field.

*Consumer Health Informatics* Catherine Arnott Smith, Alla Keselman, 2020-12-13 An engaging introduction to an exciting multidisciplinary field where positive impact depends less on technology than on understanding and responding to human motivations, specific information needs, and life constraints. -- Betsy L. Humphreys, former Deputy Director, National Library of Medicine This is a book for people who want to design or promote information technology that helps people be more active and informed participants in their healthcare. Topics include patient portals, wearable devices, apps, websites, smart homes, and online communities focused on health. Consumer Healthcare Informatics: Enabling Digital Health for Everyone educates readers in the core concepts of consumer health informatics: participatory healthcare; health and e-health literacy; user-centered design;

information retrieval and trusted information resources; and the ethical dimensions of health information and communication technologies. It presents the current state of knowledge and recent developments in the field of consumer health informatics. The discussions address tailoring information to key user groups, including patients, consumers, caregivers, parents, children and young adults, and older adults. For example, apps are considered as not just a rich consumer technology with the promise of empowered personal data management and connectedness to community and healthcare providers, but also a domain rife with concerns for effectiveness, privacy, and security, requiring both designer and user to engage in critical thinking around their choices. This book's unique contribution to the field is its focus on the consumer and patient in the context of their everyday life outside the clinical setting. Discussion of tools and technologies is grounded in this perspective and in a context of real-world use and its implications for design. There is an emphasis on empowerment through participatory and people-centered care.
